

# DATASHEET

# Infrared Receiver Module EAIRMDA1

Pin Configuration

1. OUT 2. GND 3. V<sub>CC</sub>

Block Diagram

# Features

- High protection ability against EMI
- · Ellipsoid lens for improved reception characteristics
- Available for various carrier frequencies
- Min burst length: 10 cycles
- Min gap length: 14 cycles
- · Low operating voltage and low power consumption
- · High immunity against ambient light
- · High immunity against TFT backlight
- · Long reception range
- High sensitivity
- · Pb free and RoHS compliant
- Compliance with EU REACH
- Compliance Halogen Free .(Br <900 ppm ,Cl <900 ppm , Br+Cl < 1500 ppm)

### Description

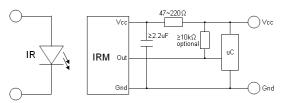

- The EAIRMDA1 devices are DIP type infrared receivers which have been developed and designed by using the latest IC technology.
- The PIN diode and preamplifier are assembled onto a lead frame and molded into a black epoxy package which operates as an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

## Applications

- AV equipment such as TV, VCR, DVD, CD, MD, etc.
- CATV set top boxes
- Multi-media Equipment
- Other devices using IR remote control

### **Application Circuit**

The RC Filter must be connected as close as possible to Vcc and GND pins.

# **Parts Table**

| Model No. | Carrier Frequency |  |  |
|-----------|-------------------|--|--|
| EAIRMDA1  | 38 kHz            |  |  |

# Absolute Maximum Ratings (Ta=25°C)

| Parameter                           | Symbol | Rating    | Unit |
|-------------------------------------|--------|-----------|------|
| Supply Voltage                      | Vcc    | 6         | V    |
| Operating Temperature               | Topr   | -20 ~ +80 | °C   |
| Storage Temperature                 | Tstg   | -40 ~ +85 | °C   |
| Soldering Temperature <sup>*1</sup> | Tsol   | 260       | °C   |

 $^{^{\star1}}$  4mm from mold body for less than 5 seconds

# Electro-Optical Characteristics (Ta=25°C, Vcc=3V)

| Parameter                 | Symbol          | MIN.    | TYP. | MAX. | Unit | Condition                |
|---------------------------|-----------------|---------|------|------|------|--------------------------|
| Current consumption       | lcc             |         | 0.4  | 0.6  | mA   | No input signal          |
| Supply voltage            | V <sub>CC</sub> | 2.7     | -    | 5.5  | V    |                          |
| Peak wavelength           | $\lambda_{p}$   |         | 940  |      | nm   |                          |
| Reception range           | L <sub>0</sub>  | 14      |      |      | - m  |                          |
|                           | $L_{45}$        | 6       |      |      |      | See chapter              |
| Half angle(horizontal)    | $\phi_h$        |         | ±35  |      | deg  |                          |
| Half angle(vertical)      | φ <sub>v</sub>  |         | ±25  |      | deg  |                          |
| High level pulse width    | Т <sub>н</sub>  | 450     |      | 700  |      | Test signal according to |
| Low level pulse width     | TL              | 500     |      | 750  | μs   | figure 1                 |
| High level output voltage | V <sub>OH</sub> | Vcc-0.4 |      |      | V    |                          |
| Low level output voltage  | V <sub>OL</sub> |         | 0.2  | 0.5  | V    | $I_{SINK}{\leq}2mA$      |
| Internal pull up resistor | R <sub>PU</sub> | 85      | 100  | 115  | kΩ   |                          |

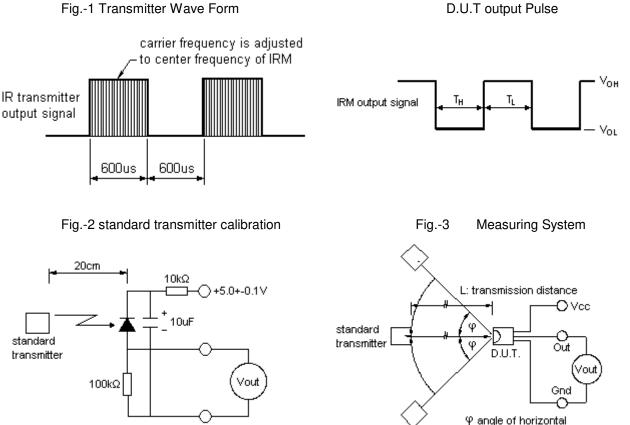

### **Test method**

The specified electro-optical characteristics are valid under the following conditions.

- 1. Measurement environment
- A place without extreme light reflections.
- 2. External light
- The environment contains an ordinary, white fluorescent lamp without high frequency modulation. The color temperature is 2856K and the illumination at the IR receiver is less than 10 Lux ( $Ev \le 10Lux$ ).
- 3. Standard transmitter

The test transmitter is calibrated by using the circuit shown in figure 2. The radiation intensity of the transmitter is adjusted until **Vo=400mVp-p.** Both, the test transmitter and the photo diode, have a peak wavelength of 940nm. The photo diode for calibration is PD438B ( $\lambda p$ =940nm, Vr=5V).

4. The measurement system is shown in Fig.-3

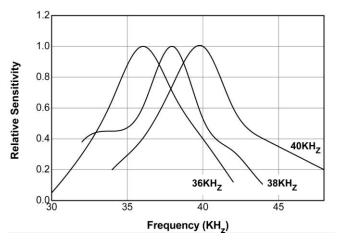

Oscilloscope
