## Functional Description

The CY7C1071DV33 is a high performance CMOS Static RAM organized as 2,097,152 words by 16 bits. The input and output pins ( $I/O_0$  through  $I/O_{15}$ ) are placed in a high impedance state when:

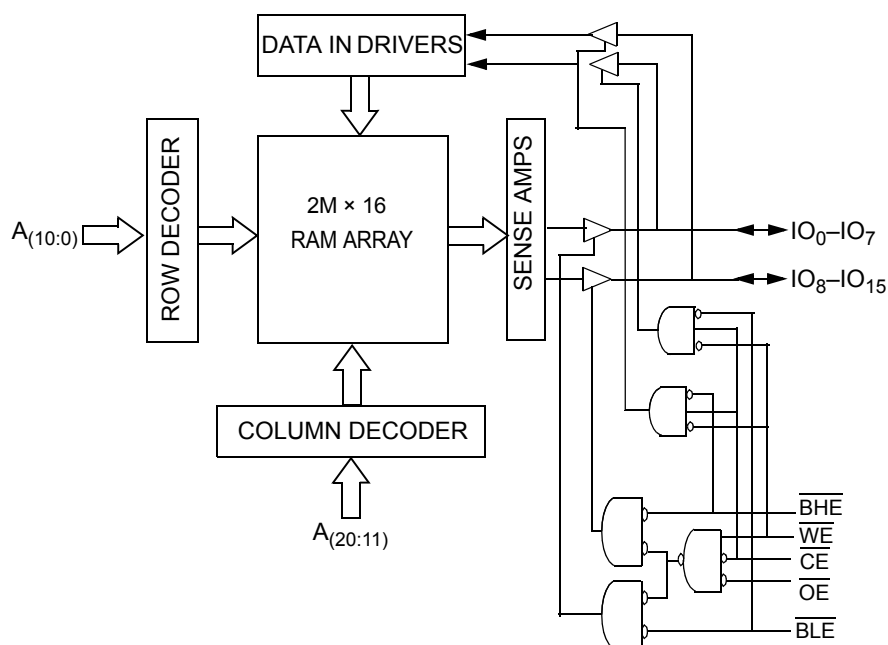

- Deselected ( $\overline{CE}$  HIGH)
- Outputs are disabled ( $\overline{OE}$  HIGH)
- Both byte high enable and byte low enable are disabled ( $\overline{BHE}$ ,  $\overline{BLE}$  HIGH)
- The write operation is active ( $\overline{CE}$  LOW and  $\overline{WE}$  LOW)

To write to the device, take Chip Enable ( $\overline{CE}$ ) and Write Enable ( $\overline{WE}$ ) inputs LOW. If Byte Low Enable ( $\overline{BLE}$ ) is LOW, then data from  $I/O$  pins ( $I/O_0$  through  $I/O_7$ ) is written into the location specified on the address pins ( $A_0$  through  $A_{20}$ ). If Byte High Enable ( $\overline{BHE}$ ) is LOW, then data from  $I/O$  pins ( $I/O_8$  through  $I/O_{15}$ ) is written into the location specified on the address pins ( $A_0$  through  $A_{20}$ ).

To read from the device, take Chip Enable ( $\overline{CE}$ ) and Output Enable ( $\overline{OE}$ ) LOW while forcing the Write Enable ( $\overline{WE}$ ) HIGH. If Byte Low Enable ( $\overline{BLE}$ ) is LOW, then data from the memory location specified by the address pins appears on  $I/O_0$  to  $I/O_7$ . If Byte High Enable ( $\overline{BHE}$ ) is LOW, then data from memory appears on  $I/O_8$  to  $I/O_{15}$ . See the [Truth Table on page 10](#) for a complete description of read and write modes.

Figure 3. Data Retention Waveform

**Notes**

- Valid SRAM operation does not occur until the power supplies reach the minimum operating  $V_{DD}$  (3.0 V). 100  $\mu\text{s}$  ( $t_{power}$ ) after reaching the minimum operating  $V_{DD}$ , normal SRAM operation begins to include reduction in  $V_{DD}$  to the data retention ( $V_{CCDR}$ , 2.0 V) voltage.
- Tested initially and after any design or process changes that may affect these parameters.
- Full device operation requires linear  $V_{CC}$  ramp from  $V_{DR}$  to  $V_{CC(min)} \geq 50\ \mu\text{s}$  or stable at  $V_{CC(min)} \geq 50\ \mu\text{s}$ .

### Notes

- Test conditions are based on signal transition time of 3 ns or less and timing reference levels of 1.5 V and input pulse levels of 0 to 3.0 V. Test conditions for the read cycle use output loading shown in part (a) of [Figure 2 on page 5](#), unless specified otherwise.
- $t_{\text{power}}$  is the minimum amount of time that the power supply must be at typical  $V_{\text{CC}}$  values until the first memory access can be performed.
- $t_{\text{HZOE}}$ ,  $t_{\text{HZCE}}$ ,  $t_{\text{HZWE}}$ ,  $t_{\text{HZBE}}$  and  $t_{\text{LZOE}}$ ,  $t_{\text{LZCE}}$ ,  $t_{\text{LZWE}}$ ,  $t_{\text{LZBE}}$  are specified with a load capacitance of 5 pF as in (b) of [Figure 2 on page 5](#). Transition is measured at  $\pm 200$  mV from steady-state voltage.
- These parameters are guaranteed by design and are not tested.
- The internal memory write time is defined by the overlap of  $\overline{\text{CE}}$ ,  $\overline{\text{WE}} = V_{\text{IL}}$ . Chip enables must be active and  $\overline{\text{WE}}$  and byte enables must be LOW to initiate a write, and the transition of any of these signals can terminate the write. The input data setup and hold timing must be referenced to the leading edge of the signal that terminates the write.
- The minimum write cycle time for Write Cycle 2 ( $\overline{\text{WE}}$  controlled,  $\overline{\text{OE}}$  LOW) is the sum of  $t_{\text{HZWE}}$  and  $t_{\text{SD}}$ .

**Notes**

- 13. Device is continuously selected.  $\overline{OE}$ ,  $\overline{CE}$ ,  $\overline{BHE}$  or  $\overline{BLE}$  or both =  $V_{IL}$ .
- 14.  $\overline{WE}$  is HIGH for read cycle.
- 15. Address valid before or similar to  $\overline{CE}$  transition LOW.

Notes

- 16. Data I/O is high impedance if  $\overline{\text{OE}}$  or  $\overline{\text{BHE}}$ ,  $\overline{\text{BLE}}$  or both =  $V_{IH}$ .
- 17. If  $\overline{\text{CE}}$  goes HIGH simultaneously with  $\overline{\text{WE}}$  going HIGH, the output remains in a high impedance state.
