

Low Jitter and Skew DC to 220 MHz Clock Buffer

Key Features

- DC to 220 MHz operating frequency range
- Low output clock skew: 60ps-typ
- Low part-to-part output skew: 80 ps-typ
- 3.3V to 2.5V operation supply voltage range
- Low power dissipation:
 - 10 mA-typ at 66MHz at VDD=3.3V
 - 9 mA-typ at 66MHz at VDD=2.5V
- One input to four output fanout buffer drivers
- Output Enable (OE) control function
- Available in 8-pin TSSOP package
- Available in Commercial and Industrial grades
- Available in Lead (Pb) free package

Applications

- General Purpose PCI/PCI-X Clock Buffer
- Printers, MFPs and Digital Copiers
- PCs and Work Stations
- Routers, Switchers and Servers
- Datacom and Telecom
- High-Speed Digital Embedded Systems

Description

The SL23EP04NZ is a low skew, jitter and power fanout buffer designed to produce up to four (4) clock outputs from one (1) reference input clock, for high speed clock distribution, including PCI/PCI-X applications.

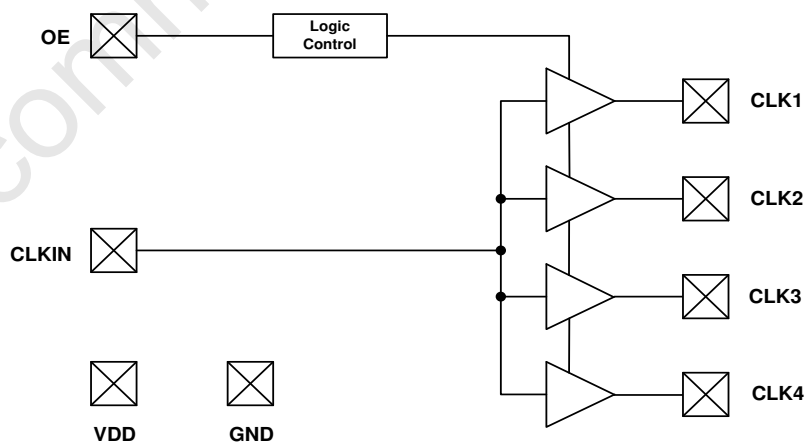

The SL23EP04NZ products operate from DC to 220MHz.

The only difference between SL23EP04-1 and SL23EP04NZ-1Z is the OE logic implementation. Refer to the Available OE Logic Configuration Table. 1

Benefits

- Up to four (4) distribution of input clock
- Low propagation delay
- Low output-to-output skew
- Low output jitter
- Low power dissipation

Block Diagram

Pin Configuration

8-Pin TSSOP

Pin Description

Pin Number	Pin Name	Pin Type	Pin Description
1	CLKIN	Input	Reference Clock Input
2	OE	Output	Output Enable. Refer to the Table. 1 for Logic Table
3	CLK1	Output	Buffered Clock Output 1
4	GND	Power	Power Ground.
5	CLK2	Output	Buffered Clock Output 2
6	VDD	Output	3.3V to 2.5V +/-10% Power Supply
7	CLK3	Power	Buffered Clock Output 3
8	CLK4	Input	Buffered Clock Output 4

General Description

The SL23EP04NZ is a low skew, jitter and power fanout clock distribution buffer designed to produce up to four (4) clock outputs from one (1) reference input clock, for high speed clock distribution, including PCI/PCI-X applications.

Input and output Frequency Range

The input and output frequency is the same (1x) for SL23EP04NZ-1 and SL23EP04NZ-1Z. The products operate from DC to 220MHz clock range with up to 30pF output loads at each output.

OE (Output Enable) Function

The only difference between SL23EP04-1 and SL23EP04NZ-1Z is the OE logic implementation. When OE=0, SL23EP04NZ-1 outputs are disabled and outputs are at Logic Low. In the case of SL23EP04NZ-1Z the outputs are at High-Z. Refer to the Available OE Logic Configuration Table. 1 below.

Output Clock Skew

All outputs should drive the similar load to achieve output-to-output skew and input-to-output delay specifications as given in the switching electrical tables.

Power Supply Range (VDD)

The SL23EP04 is designed to operate from 3.3V+/-10% to 2.5V+/-10% VDD power supply range. An internal on-chip voltage regulator is used to provide to constant power supply of 1.8V in the core, leading to a consistent and stable electrical performance in terms of skew and jitter. The SL23EP04NZ I/O is powered by using VDD.

Contact SLI for 1.8V power supply Fan-Out Buffer and ZDB products.

External Components & Design Considerations

Typical Application Schematic

Comments and Recommendations

Decoupling Capacitor: A decoupling capacitor of 0.1µF must be used between VDD and VSS pins. Place the capacitor on the component side of the PCB as close to the VDD pin as possible. The PCB trace to the VDD pin and to the GND via should be kept as short as possible. Do not use vias between the decoupling capacitor and the VDD pin.

Package Outline and Package Dimensions

8-Pin TSSOP (4.4 mm)

Thermal Characteristics

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Thermal Resistance Junction to Ambient	θ_{JA}	Still air	-	110	-	°C/W
	θ_{JA}	1 m/s air flow	-	100	-	°C/W
	θ_{JA}	3 m/s air flow	-	80	-	°C/W
Thermal Resistance Junction to Case	θ_{JC}	Independent of air flow	-	35	-	°C/W
