DLD Testing Information

100% of the crystals are measured at the following drive levels in the order listed:

10nw
25nw
50nw
100nw
500nw
1uw
5uw
10uw
50uw
100uw

The reference value is the ESR and FL at 50uw

The Frequency and resistance measurements are then compared to the reference value and P/F limits are as follows:
10/25/50 nw levels 2.0 ppm max, 10% ESR max Remaining drive levels 1.0 ppm max, 10% ESR max.

All devices are tested once and no retesting allowed.

CS-023E is tested -40 to 85 °C every 2°C with no discontinuities > 1 ppm and the change in R - effective < 10%
