

## CLWT-067TM

BENCHTOP CLOSED LOOP WIND TUNNEL FOR ELEVATED TEMPERATURE TESTING OF BOARDS AND COMPONENTS

The **CLWT-067™** is a research-quality closed loop wind tunnel that provides a convenient, accurate system for thermally characterizing PCBs and individual

from ambient to 85°C.

The **CLWT-067™** wind tunnel produces air

components at controlled temperatures

flows from 1 to 7 m/s (1,400 ft/min). With customization, it can generate flows up to 50 m/s (10,000 ft/min) using orifice plates (available optionally). The clear Lexan test section lets the user view the test specimen and allows for ease of flow visualization.

Unlike open loop wind tunnels, the **CLWT-067™** recirculates internal air. This allows the system heater to quickly warm the air to a specific temperature. The testing of boards and components in hot air is a requirement in many electric systems such as components and power supplies. The precise controls of air temperature and velocity along with the board temperature range of the **CLWT-067™** wind tunnel make it a versatile test instrument for a variety of applications.

The complete wind tunnel fits on most lab benches and is powered from the **CLWTC-1000**™ (purchased separately). The **CLWTC-1000**™ requires 220 VAC at 20 Amps. It has a smaller footprint than traditional, closed loop wind tunnels or environmental test chambers.

The wind tunnel's test section can be accessed from the top door for mounting and repositioning of devices under test and sensors. Optional internal rail guides provide an easy mechanism to install test specimens of different sizes (e.g., PCB, heat sink).

Instrument ports (6) are provided in the side walls of the test section for placing temperature and velocity sensors, such as thermocouples, Pitot tubes and hot-wire anemometers.

## **RECOMMENDED ACCESSORIES:**

**CLWTC-1000** <sup>™</sup> Wind Tunnel Controller

Custom options are also available. Contact ATS for details.

FLOW RANGE
1 to 7 m/s (200 to 1400 ft/min)

**TEMPERATURE RANGE**Ambient to 85°C (Ambient to 185°F)

OVERALL DIMENSIONS (L X W X H)

143.6 x 49.3 x 67.7 cm

TEST SECTION DIMENSIONS

NUMBER OF INSTRUMENT PORTS

(56.5 x 19.4 x 26.6")

41.8 x 22.5 x 8.9 cm

(16.4 x 8.9 x 3.5")

**WEIGHT** 70.7 kg (156 lbs.)

## **FEATURES:**

- Wigh Temperature Testing Evaluate the effects of elevated temperatures on components and power supplies at different velocity
- » Aerodynamic & Pressure Drop Measurement Measure the effect of air flow on drag and pressure drop for components and boards
- » Flow Characteristics
  High quality flow with very low turbulence intensity
- Wind Tunnel Controller Control flow and temperatures while viewing data and monitoring events with CLWTC-1000™
- Component Testing
  Evaluate the effects of air
  flow on an individual or multiple
  component's temperature and
  PCB response and reliability
- » Quick Access
   Quickly change the test
   specimen through the top
   access test section
- Sensor Ports
  Measure pressure, velocity
  and temperature through
  sensor ports
- » Heat Sink Characterization Characterize a variety of heat sink sizes for natural and forced convection cooling
- » Sensor Calibration Precision temperature and velocity controls allow accurate calibration of sensors
- » Multiple PCB Testing Test actual or simulated PCBs for thermal and air flow distribution
