Description

The RPMB-2.0 series is a 2A non-isolated SMD switching regulator power module with up to 36V input voltage. Despite its compact LGA footprint and low profile (12.2x12.2x3.75mm), it offers a full set of features including adjustable output from 1V up to 24V, on/off control, sense and power good output signals. With an efficiency of up to 94% which remains nearly constant over a 5% to 100% load range, the device can operate at ambient temperatures as high as +100°C without forced air cooling. The package is complete with 6-sided shielding for optimal EMC performance and excellent heat management. The fully protected module (UVLO, SCP, OCP, OTP) can drive high capacitive loads of up to 0.2F.

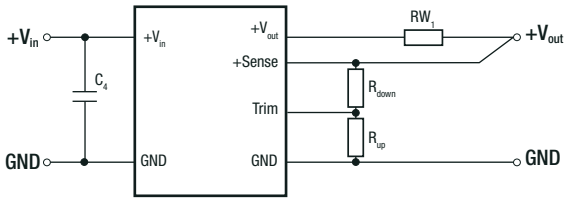
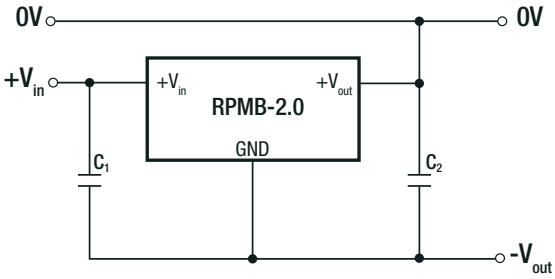
REMOTE SENSE



RW_1 ... wire losses +
R_{up} ... trim up resistor
R_{down} ... trim down resistor

The output voltage can be adjusted via trim and sense functions. The maximum output voltage from trim and sense functions combined is 9V and 24V (based on models). Derating may be required when using trim and/or sense functions.

POSITIVE TO NEGATIVE



C_1 and C_2 may be added to reduced ripple and should be fitted close to the converter pins.

Notes:

Note6: RECOM Power Modules can also be used to convert a positive voltag into a negative voltage. Parameters such as maximum Vin, efficiency and maximum operating temperature are reduced. Please contact RECOM for further details.

OUTPUT VOLTAGE TRIMMING

The RPMB-series offers the feature of trimming the output voltage by using external trim resistors. The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary. Refer to ***"Selection Guide"*** for applicable Vout Adjust Range.

Trim up

5VDC	100kΩ	24.9kΩ
12VDC	100kΩ	9.09kΩ
15VDC	90.9kΩ	6.49kΩ

$$R_{up} = \frac{R_4 \times (Vout_{set} - 1) - R_3 \times (R_4 + 1)}{R_3 - R_4 \times (Vout_{set} - 1)}$$

$$R_{down} = \frac{R_4 \times (Vout_{set} - 1) \times (R_3 + 1) - R_3}{R_3 - R_4 \times (Vout_{set} - 1)}$$
