

MIC2128 High Power Evaluation Board

Part Number: ADM01006

Summary

The MIC2128 Evaluation Boards were developed to help engineers reduce product design cycle time and have an optimum platform to evaluate the high current high power capability of the MIC2128. The boards provide up to 10A output current suitable for many different applications.

Package Contents

1 x ADM01006 (MIC2128 High Power Evaluation Board)

Product Features

The MIC2128 Evaluation Boards were developed to help engineers reduce product design cycle time and have an optimum platform to evaluate the high current high power capability of the MIC2128. The boards provide up to 10A output current suitable for many different applications.
