

### GENERAL DESCRIPTION

The ICS8705 is a highly versatile 1:8 Differential-to-LVCMOS/LVTTL Clock Generator and a member of the HiPerClockS™ family of High Performance Clock Solutions from ICS. The ICS8705 has two selectable clock inputs. The CLK1, nCLK1 pair can accept most standard differential input levels. The single ended CLK0 input accepts LVCMOS or LVTTL input levels. The ICS8705 has a fully integrated PLL and can be configured as zero delay buffer, multiplier or divider and has an input and output frequency range of 15.625MHz to 250MHz. The reference divider, feedback divider and output divider are each programmable, thereby allowing for the following output-to-input frequency ratios: 8:1, 4:1, 2:1, 1:1, 1:2, 1:4, 1:8. The external feedback allows the device to achieve “zero delay” between the input clock and the output clocks. The PLL\_SEL pin can be used to bypass the PLL for system test and debug purposes. In bypass mode, the reference clock is routed around the PLL and into the internal output dividers.

### FEATURES

- 8 LVCMOS/LVTTL outputs, 7Ω typical output impedance
- Selectable CLK1, nCLK1 or LVCMOS/LVTTL clock inputs
- CLK1, nCLK1 pair can accept the following differential input levels: LVPECL, LVDS, LVHSTL, HCSL, SSTL
- CLK0 input accepts LVCMOS or LVTTL input levels
- Output frequency range: 15.625MHz to 250MHz
- Input frequency range: 15.625MHz to 250MHz
- VCO range: 250MHz to 500MHz
- External feedback for “zero delay” clock regeneration with configurable frequencies
- Programmable dividers allow for the following output-to-input frequency ratios: 8:1, 4:1, 2:1, 1:1, 1:2, 1:4, 1:8
- Fully integrated PLL
- Cycle-to-cycle jitter: 45ps (maximum)
- Output skew: CLK0, 65ps (maximum)  
CLK1, nCLK1, 55ps (maximum)
- Static Phase Offset: 25 ±125ps (maximum), CLK0
- Full 3.3V or 2.5V operating supply
- 0°C to 70°C ambient operating temperature
- Lead-Free package fully RoHS compliant

### BLOCK DIAGRAM

### PIN ASSIGNMENT

**TABLE 1. PIN DESCRIPTIONS**

Number	Name	Type		Description
1, 2, 11	SEL0, SEL1, SEL2	Input	Pulldown	Determines output divider values in Table 3. LVCMOS/LVTTL interface levels.
3	CLK0	Input	Pulldown	Clock input. LVCMOS/LVTTL interface levels.
4	nc			No connect.
5	CLK1	Input	Pulldown	Non-inverting differential clock input.
6	nCLK1	Input	Pullup	Inverting differential clock input.
7	CLK_SEL	Input	Pulldown	Clock select input. When HIGH, selects differential CLK1, nCLK1. When LOW, selects LVCMOS CLK0. LVCMOS/LVTTL interface levels.
8	MR	Input	Pulldown	Active HIGH Master Reset. When logic HIGH, the internal dividers are reset causing the outputs to go low. When logic LOW, the internal dividers and the outputs are enabled. LVCMOS/LVTTL interface levels.
9, 32	V <sub>DD</sub>	Power		Core supply pins.
10	FB_IN	Input	Pulldown	LVCMOS/LVTTL feedback input to phase detector for regenerating clocks with "zero delay". Connect to one of the outputs. LVCMOS/LVTTL interface levels.
12, 16, 20, 24, 28	V <sub>DDO</sub>	Power		Output supply pins.
13, 15, 17, 19, 21, 23, 25, 27	Q0, Q1, Q2, Q3, Q4, Q5, Q6, Q7	Output		Clock output. 7Ω typical output impedance. LVCMOS/LVTTL interface levels.
14, 18, 22, 26	GND	Power		Power supply ground.
29	SEL3	Input	Pulldown	Determines output divider values in Table 3. LVCMOS/LVTTL interface levels.
30	V <sub>DDA</sub>	Power		Analog supply pin.
31	PLL_SEL	Input	Pullup	Selects between the PLL and reference clock as input to the dividers. When LOW, selects the reference clock (PLL Bypass). When HIGH, selects PLL (PLL Enabled). LVCMOS/LVTTL interface levels.

NOTE: *Pullup* and *Pulldown* refer to internal input resistors. See Table 2, Pin Characteristics, for typical values.

**TABLE 2. PIN CHARACTERISTICS**

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C <sub>IN</sub>	Input Capacitance			4		pF
R <sub>PULLUP</sub>	Input Pullup Resistor			51		KΩ

**ABSOLUTE MAXIMUM RATINGS**

Supply Voltage, $V_{DD}$	4.6V
Inputs, $V_i$	-0.5V to $V_{DD} + 0.5V$
Outputs, $V_o$	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, $\theta_{JA}$	47.9°C/W (0 lfpm)
Storage Temperature, $T_{STG}$	-65°C to 150°C

NOTE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

**TABLE 4A. POWER SUPPLY DC CHARACTERISTICS,  $V_{DD} = V_{DDA} = V_{DDO} = 3.3V \pm 5\%$ ,  $T_A = 0^\circ C$  TO  $70^\circ C$**

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units

## APPLICATION INFORMATION

### POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS8705 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL.  $V_{DD}$ ,  $V_{DDA}$ , and  $V_{DDO}$  should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a  $10\Omega$  resistor along with a  $10\mu\text{F}$  and a  $.01\mu\text{F}$  bypass capacitor should be connected to each  $V_{DDA}$ .

FIGURE 1. POWER SUPPLY FILTERING

### WIRING THE DIFFERENTIAL INPUT TO ACCEPT SINGLE ENDED LEVELS

*Figure 2* shows how the differential input can be wired to accept single ended levels. The reference voltage  $V_{REF} = V_{CC}/2$  is generated by the bias resistors R1, R2 and C1. This bias circuit should be located as close as possible to the input pin. The ratio

of R1 and R2 might need to be adjusted to position the  $V_{REF}$  in the center of the input voltage swing. For example, if the input clock swing is only 2.5V and  $V_{CC} = 3.3\text{V}$ ,  $V_{REF}$  should be 1.25V and  $R2/R1 = 0.609$ .

FIGURE 2. SINGLE ENDED SIGNAL DRIVING DIFFERENTIAL INPUT

### DIFFERENTIAL CLOCK INPUT INTERFACE

The CLK /nCLK accepts LVDS, LVPECL, LVHSTL, SSTL, HCSSL and other differential signals. Both  $V_{SWING}$  and  $V_{OH}$  must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. Figures 3A to 3D show interface examples for the HiPerClockS CLK/nCLK input driven by the most common driver types. The input interfaces suggested

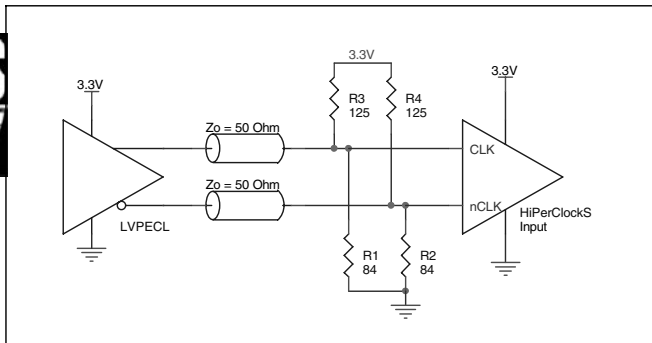

here are examples only. Please consult with the vendor of the driver component to confirm the driver termination requirements. For example in *Figure 4A*, the input termination applies for ICS HiPerClockS LVHSTL drivers. If you are using an LVHSTL driver from another vendor, use their termination recommendation.

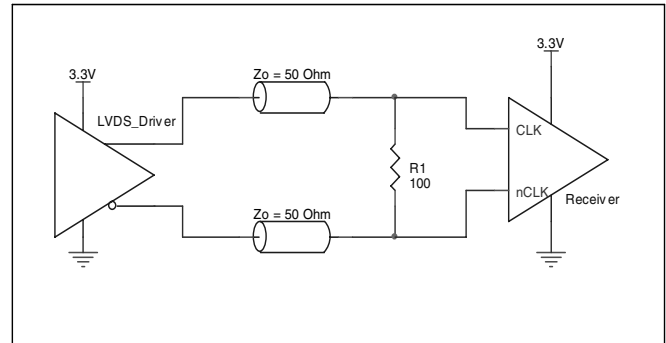

**FIGURE 3A. HiPerClockS CLK/nCLK INPUT DRIVEN BY ICS HiPerClockS LVHSTL DRIVER**

**FIGURE 3B. HiPerClockS CLK/nCLK INPUT DRIVEN BY 3.3V LVPECL DRIVER**

**FIGURE 3C. HiPerClockS CLK/nCLK INPUT DRIVEN BY 3.3V LVPECL DRIVER**

**FIGURE 3D. HiPerClockS CLK/nCLK INPUT DRIVEN BY 3.3V LVDS DRIVER**

The following component footprints are used in this layout example:

All the resistors and capacitors are size 0603.

#### POWER AND GROUNDING

Place the decoupling capacitors as close as possible to the power pins. If space allows, placement of the decoupling capacitor on the component side is preferred. This can reduce unwanted inductance between the decoupling capacitor and the power pin caused by the via.

Maximize the power and ground pad sizes and number of vias capacitors. This can reduce the inductance between the power and ground planes and the component power and ground pins.

The RC filter consisting of R7, C11, and C16 should be placed as close to the  $V_{DDA}$  pin as possible.

#### CLOCK TRACES AND TERMINATION

Poor signal integrity can degrade the system performance or cause system failure. In synchronous high-speed digital systems, the clock signal is less tolerant to poor signal integrity than other signals. Any ringing on the rising or falling edge or excessive ring back can cause system failure. The shape of the trace and the

trace delay might be restricted by the available space on the board and the component location. While routing the traces, the clock signal traces should be routed first and should be locked prior to routing other signal traces.

- The differential 50Ω output traces should have same length.
- Avoid sharp angles on the clock trace. Sharp angle turns cause the characteristic impedance to change on the transmission lines.
- Keep the clock traces on the same layer. Whenever possible, avoid placing vias on the clock traces. Placement of vias on the traces can affect the trace characteristic impedance and hence degrade signal integrity.
- To prevent cross talk, avoid routing other signal traces in parallel with the clock traces. If running parallel traces is unavoidable, allow a separation of at least three trace widths between the differential clock trace and the other signal trace.
- Make sure no other signal traces are routed between the clock trace pair.
- The series termination resistors should be located as close to the driver pins as possible.

ICS8705BY	ICS8705BY	32 Lead LQFP	tray	0°C to 70°C
ICS8705BYT	ICS8705BY	32 Lead LQFP	1000 tape & reel	0°C to 70°C
ICS8705BYLF	ICS8705BYLF	32 Lead "Lead Free" LQFP	250 per tray	0°C to 70°C
ICS8705BYLFT	ICS8705BYLF	32 Lead "Lead Free" LQFP	1000	0°C to 70°C

NOTE: Parts that are ordered with an "LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.

The aforementioned trademark, HiPerClockS™ is a trademark of Integrated Circuit Systems, Inc. or its subsidiaries in the United States and/or other countries. While the information presented herein has been checked for both accuracy and reliability, Integrated Circuit Systems, Incorporated (ICS) assumes no responsibility for either its use or for infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by ICS. ICS reserves the right to change any circuitry or specifications without notice. ICS does not authorize or warrant any ICS product for use in life support devices or critical medical instruments.

REVISION HISTORY SHEET				
Rev	Table	Page	Description of Change	Date
A		1	Updated Block Diagram	1/25/02
B	T3A	3	PLL Enable Function Table - revised the Reference Frequency Range column 3.3V AC Characteristics Table - updated the Output Frequency row from 350MHz Max. to 275MHz Max. Added 2.5V tables.	3/14/02
	T5A	5		
	T4D:T4F; T5B	6, 7		
C	T3A	3	PLL Enable Function Table - revised the Reference Frequency Range column 3.3V AC Characteristics Table - updated the Output Frequency row from 275MHz Max. to 250MHz Max. 2.5V AC Characteristics Table - updated the Output Frequency row from 275MHz Max. to 250MHz Max.	4/4/02
	T5A	5		
	T5B	7		
C	T1	2	Pin Description Table - revised power pin descriptions.	4/10/02
C	T2	2	Pin Characteristics Table - add 23pF (typical) in C <sub>PD</sub> row.	7/15/02
C	T1	2	Pin Description Table - Pin# 10 from description, replaced "Connect to pin 10." with "Connect to one of the outputs."	8/1/02
C	T1	2	Revised CLK0 description and MR description.	8/21/02
		8	Revised Output Rise/Fall Time Diagram.	
D	T1, T4A, T4D	2, 4, 6	Revised description for V <sub>DD</sub> to read Core supply from Positive supply. AC Characteristics, added another row to "odc" with different test conditions and values. Updated format.	11/22/02
	T5A, T5B	5, 7		
E	1	2	Pin Description table - revised MR description.	1/22/03
	T5A & T5B	5 & 7	AC tables - Changed the Static Phase Offset limits for CLK1, nCLK1.	
F	T5A & T5B	5 & 7	AC tables - added Static Phase Offset with "fREF = 66MHz, Qx * 2". 3.3V AC table - corrected typo in SPO parameter to read NOTE 4 from NOTE 7. Throughout datasheet revised title to read "...Differential-to-LVCMOS/LVTTL..."	2/13/03
G	T5B	7	2.5V AC Characteristics Table - added Phase Jitter spec, and Note 5.	3/14/03
		9	Replaced Static Phase Offset Diagram with Phase Jitter & SPO Diagram.	
G	T2	2	Pin Characteristics Table - changed C <sub>IN</sub> from 4pF max. to 4pF typical.	5/15/03
		11	Added Differential Clock Input Interface section.	
G		12 & 13	Added Layout Guideline	6/6/03
G	T6	14	Ordering Information Table - added "Lead-Free" part number	6/16/04
G		1	Features Section - added temperature bullet.	3/18/05
	T8	16	Ordering Information Table - Added "Lead-Free" note.
