

DVK91220

DEVELOPMENT KITS FOR MLX91220 AND MLX91221

The snout of the platypus is a sensory organ with electroreceptors in the skin of the bill, which allow him to detect the electrical field that gets generated when his prey contracts its muscles. With his 40,000 sensitive electronic sensors, this unique semi aquatic egg-laying mammal represents our current sensors.

ISOLATED INTEGRATED CURRENT SENSOR DEVELOPMENT KITS
