

AFBR-2CARxxZ

10G Ethernet SFP+ Active Optical Cable (AOC)

Data Sheet

Description

The Avago Technologies' AFBR-2CARxxZ Active Optical Cable (AOC) is part of a family of SFP+ products to serve 10Gb Ethernet (10GbE) applications. The letters "xx" of the part number AFBR-2CARxxZ denoted the cable length in meters. The AFBR-2CARxxZ AOC enables 10GbE equipment designs with very high port density based on the new electrical and mechanical specification enhancements to the well known SFP specifications developed by the SFF Committee. The specifications are referred to as "SFP+" to represent the enhancements over previous SFP specifications. The SFP+ AOC have a cable length up to 20m. These AOCs can be used as an alternative solution to SFP+ passive and active copper cables, while providing improved signal integrity, longer distances, superior electromagnetic immunity and better bit error rate performance.

Related Products

- The AFBR-703SDZ (AFBR-703ASDZ) is an SFP+ 10 Gigabit Ethernet 10GBASE-SR transceiver with case temperature operated at 0-70 (0-85) °C for use on multimode fiber cables. It is best suited for OM3 high bandwidth MMF link applications with link lengths up to 300 meters.
- AFBR-707SDZ SFP+ 10 Gigabit Ethernet 10GBASE-LRM transceiver for 220 meter operation in all MMF link applications including OM1 and OM2 legacy fiber cables and new high bandwidth OM3 fiber cables.
- The AFBR-704SDZ is an SFP+ transceiver for 10GbE 10GBASE-USR applications with case temperature 0-70 °C for use on multimode fiber cables up to 100m.
- AFCT-5016Z SFP+ Evaluation Board The purpose of this SFP+ evaluation board is to provide the designer with a convenient means for evaluating SFP+ fiber optic transceivers.

Features

- Proven High Reliability 850 nm technology: Avago VCSEL transmitter and Avago PIN receiver
- Maximum power dissipation 350mW per Active Cable end
- Avago SFP+ package design enables equipment EMI performance in high port density applications with margin to Class B limits

Specifications

- Electrical specifications per SFF-8431 Specifications for Enhanced Small Form Factor Pluggable Module SFP+
- 0 to 70 °C case temperature operating range
- Rx_LOS and Tx_DISABLE supported
- Mechanical specifications per SFF Committee SFF 8432 Improved Pluggable Formfactor "IPF"
- Compliant to Restriction on Hazardous Substances (RoHS) per EU and China requirements
- Class 1 eye safe per requirement of EN 60825-1 2007, EN 60825-2 A2 2010
- 1E-15 BER performance

Applications

- 1/10 Gigabit Ethernet (1/10GbE)
- 1/2/4/8G Fibre Channel (1/2/4/8GFC), Fibre Channel over Ethernet (FCoE)
- InfiniBand (QDR/DDR/SDR)
- Data Center Networking
 - Converged Enhanced Ethernet Data Centers
 - Data Center Bridging
- Networked storage systems
- High Performance Computing
- Proprietary Interconnects

Part Number	Description
AFBR-2CAR01Z	1 meter SFP+ Active Optical Cable
AFBR-2CAR02Z	2 meter SFP+ Active Optical Cable
AFBR-2CAR03Z	3 meter SFP+ Active Optical Cable
AFBR-2CAR05Z	5 meter SFP+ Active Optical Cable
AFBR-2CAR07Z	7 meter SFP+ Active Optical Cable
AFBR-2CAR10Z	10 meter SFP+ Active Optical Cable
AFBR-2CAR15Z	15 meter SFP+ Active Optical Cable
AFBR-2CAR20Z	20 meter SFP+ Active Optical Cable
AFCT-5016Z	SFP+ Evaluation Board

Installation

The AFBR-2CARxxZ Active Optical Cable package is compliant with the SFF-8432 Improved Pluggable Formfactor housing specification for the SFP+. It can be installed in any INF-8074 or SFF-8431/2 compliant Small Form Pluggable (SFP) port regardless of host equipment operating status. The AFBR-2CARxxZ is hot-pluggable, allowing both active cable ends to be installed while the host system is operating and on-line. Upon insertion, the housing makes initial contact with the host board SFP cage, mitigating potential damage due to Electro-Static Discharge (ESD).

Digital Interface and Serial Identification

The two-wire interface protocol and signaling detail are based on SFF-8431. Conventional EEPROM memory, bytes 0-255 at memory address 0xA0, is organized in compliance with SFF-8431. The EEPROM contents of AFBR-2CARxxZ are such that it can directly replace the Active Copper Cable.

Transmitter Section

The transmitter section includes an 850 nm VCSEL (Vertical Cavity Surface Emitting Laser) light source designed and manufactured by Avago Technologies. The VCSEL is driven by an IC which uses the incoming differential high speed logic signal to modulate the laser diode driver current. This Tx laser driver circuit regulates the optical power at a constant level provided the incoming data pattern is DC balanced. DC blocking capacitors are located inside the AOC package and are not required on the system board.

Transmit Disable (TX_DISABLE)

Each end of the AFBR-2CARxxZ AOC has a TX_DISABLE hardware pin, which accepts an input LVTTTL compatible control signal that shuts down the transmitter optical output. A logic high signal implements the transmitter disable function, while a low signal allows normal transmitter operation. An internal pull up resistor disables the transmitter until the host pulls the input low.

Receiver Section

The receiver section includes a PIN photodiode and custom amplification and quantization IC. DC blocking capacitors are located inside the AOC package and are not required on the system board.

Receiver Loss of Signal (Rx_LOS)

The Rx portion of the IC includes detection circuitry which monitors the average input Rx optical power and provides a LVTTTL/CMOS compatible status signal to the host via the Rx_LOS pin. A logic high status on this Rx_LOS output pin indicates a loss of signal, indicating a link failure such as a broken fiber, or the far-end cable-end is not plugged in, or the far-end Tx has failed or has been disabled.

Functional Data I/O

The AFBR-2CARxxZ interfaces with the host circuit board through the twenty contact SFP+ electrical connector. See Table 2 for contact descriptions. The device edge connector is shown in Figure 2.

The AFBR-2CARxxZ high speed transmit and receive interfaces require SFF-8431 compliant signal lines on the host board. The TX_DISABLE and RX_LOS signals require LVTTTL signals on the host board (per SFF-8431) if used. If an application does not take advantage of these functions, care must be taken to ground TX_DISABLE to enable normal operation.

Application Support

An Evaluation Kit and Reference Designs are available to assist in evaluation of the AFBR-2CARxxZ. Please contact your local Field Sales representative for availability and ordering details.

Caution

There are no user serviceable parts nor maintenance requirements for the AFBR-2CARxxZ. All mechanical adjustments are made at the factory prior to shipment. Tampering with, modifying, misusing or improperly handling the AFBR-2CARxxZ will void the product warranty. It may also result in improper operation and possibly overstress the device. Performance degradation or device failure may result. Operating above maximum operating conditions or in a manner inconsistent with its design and function may result in exposure to hazardous light radiation and may constitute an act of modifying or manufacturing a laser product. Persons performing such an act are required by law to recertify and re-identify the laser product under the provisions of U.S. 21 CFR (Subchapter J) and TUV.

Customer Manufacturing Processes

This AOC is pluggable and is not designed for aqueous wash, IR reflow, or wave soldering processes.

Ordering Information

Please contact your local field sales engineer or one of Avago Technologies franchised distributors for ordering information. For technical information, please visit Avago Technologies' WEB page at www.avagotech.com. For information related to SFF Committee documentation visit www.sffcommittee.org.

Regulatory Compliance

The AFBR-2CARxxZ complies with all applicable laws and regulations as detailed in Table 1. Certification level is dependent on the overall configuration of the host equipment. The AOC performance is offered as a figure of merit to assist the designer.

Electrostatic Discharge (ESD)

The AFBR-2CARxxZ is compatible with ESD levels found in typical manufacturing and operating environments as described in Table 1. In the normal handling and operation of optical cables, ESD is of concern in two circumstances.

The first case is during handling of the AOC prior to insertion into an SFP+ compliant cage. To protect the device, it's important to use normal ESD handling pre-cautions. These include use of grounded wrist straps, work-benches and floor wherever a optical cable is handled.

The second case to consider is static discharges to the exterior of the host equipment chassis after installation. If the optical interface is exposed to the exterior of host equipment cabinet, the optical cable may be subject to system level ESD requirements.

Electromagnetic Interference (EMI)

Equipment incorporating 10 gigabit transceivers or active optical cables is typically subject to regulation by the FCC in the United States, CENELEC EN55022 (CISPR 22) in Europe and VCCI in Japan. The AFBR-2CARxxZ enables equipment compliance to these standards detailed in Table 1. The metal housing and shielded design of the AFBR-2CARxxZ minimizes the EMI challenge facing the equipment designer. For superior EMI performance it is recommended that equipment designs utilize SFP+ cages per SFF 8432.

RF Immunity (Susceptibility)

The EMI immunity of the AFBR-2CARxxZ exceeds typical industry standards.

Eye Safety

The AFBR-2CARxxZ provides Class 1 (single fault tolerant) eye safety by design and has been tested for compliance with the requirements listed in Table 1. The eye safety circuit continuously monitors the optical output power level and will disable the transmitter upon detecting a condition beyond the scope of Class 1 certification. Such conditions can be due to inputs from the host board (Vcc fluctuation, unbalanced code) or a fault within the transceiver. US CDRH and EU TUV certificates are listed in table 1.

Flammability

The AFBR-2CARxxZ optical cable is made of metal and high strength, heat resistant, chemical resistant and UL 94V-0 flame retardant plastic.

Table 1. Regulatory Compliance

Feature	Test Method	Performance
Electrostatic Discharge (ESD) to the Electrical Contacts	MIL-STD-883C Method 3015.4	Class 1 (> 2000 Volts)
Life Traffic ESD Immunity	IEC 61000-4-2	10 contacts of 8 kV on the electrical faceplate with device inserted into a panel.
Life Traffic ESD Immunity	IEC 61000-4-2	Air discharge of 15 kV (min.) contact to connector without damage.
Electromagnetic Interference (EMI)	FCC Class B CENELEC EN55022 Class B (CISPR 22A) VCCI Class A	System margins are dependent on customer board and chassis design.
RF Immunity	IEC 61000-4-3	Typically shows no measurable effect from a 10 V/m field swept from 80MHz to 1 GHz
Laser Eye Safety and Equipment Type Testing	EN 60825-1 2007, EN 60825-2 A2:2010	P _{out} : IEC AEL & US FDA CDRH Class 1
		
Component Recognition	Underwriters Laboratories and Canadian Standards Association Joint Component Recognition for Information Technology Equipment including Electrical Business Equipment	
RoHS Compliance	RoHS Directive 2002/95/EC and its amendment directives 6/6	SGS Test Report No. LPC/13392 (AD-1)/07 CTS Ref. CTS/07/3283/Avago
Flammability	Module: UL 94V-0 Cable: OFNR	

NOTE: INDUCTORS MUST HAVE LESS THAN 1Ω SERIES RESISTANCE TO LIMIT VOLTAGE DROP TO THE SFP MODULE.

Figure 1. Recommended power supply filter

Table 2. Contact Description

Contact	Symbol	Function/Description	Notes
1	VeeT	Transmitter Signal Ground	Note 1
2	TX_FAULT	Transmitter Fault (LVTTTL-O) – Not used. Grounded inside the module	Note 2
3	TX_DISABLE	Transmitter Disable (LVTTTL-I) – High or open disables the transmitter	Note 3
4	SDA	Two Wire Serial Interface Data Line (LVCMOS – I/O) (same as MOD-DEF2 in INF-8074)	Note 4
5	SCL	Two Wire Serial Interface Clock Line (LVCMOS – I/O) (same as MOD-DEF1 in INF-8074)	Note 4
6	MOD_ABS	Module Absent (Output), connected to VeeT or VeeR in the module	Note 5
7	RS0	Rate Select 0 - Not used, Presents high input impedance.	
8	RX_LOS	Receiver Loss of Signal (LVTTTL-O)	Note 2
9	RS1	Rate Select 1 - Not used, Presents high input impedance.	
10	VeeR	Receiver Signal Ground	Note 1
11	VeeR	Receiver Signal Ground	Note 1
12	RD-	Receiver Data Out Inverted (CML-O)	
13	RD+	Receiver Data Out (CML-O)	
14	VeeR	Receiver Signal Ground	
15	VccR	Receiver Power + 3.3 V	
16	VccT	Transmitter Power + 3.3 V	
17	VeeT	Transmitter Signal Ground	Note 1
18	TD+	Transmitter Data In (CML-I)	
19	TD-	Transmitter Data In Inverted (CML-I)	
20	VeeT	Transmitter Signal Ground	Note 1

Notes:

1. The module signal grounds are isolated from the module case.
2. This is an open collector/drain output that on the host board requires a 4.7 kΩ to 10 kΩ pullup resistor to VccHost. See Figure 2.
3. This input is internally biased high with a 4.7 kΩ to 10 kΩ pullup resistor to VccT.
4. Two-Wire Serial interface clock and data lines require an external pullup resistor dependent on the capacitance load.
5. This is a ground return that on the host board requires a 4.7 kΩ to 10 kΩ pullup resistor to VccHost.

Figure 2. Module edge connector contacts

Table 3. Absolute Maximum Ratings

Stress in excess of any of the individual Absolute Maximum Ratings can cause immediate catastrophic damage to the module even if all other parameters are within Recommended Operating Conditions. It should not be assumed that limiting values of more than one parameter can be applied concurrently. Exposure to any of the Absolute Maximum Ratings for extended periods can adversely affect reliability.

Parameter	Symbol	Minimum	Maximum	Unit	Notes
Storage Temperature	T _S	-40	85	C	
Relative Humidity	RH	5	95	%	
Supply Voltage	V _{ccT} , V _{ccR}	-0.3	3.8	V	Note 1
Low Speed Input Voltage		-0.5	V _{cc} +0.5	V	
Two-Wire Interface Input Voltage		-0.5	V _{cc} +0.5	V	
High Speed Input Voltage, Single Ended		-0.3	V _{cc} +0.5	V	
High Speed Input Voltage, Differential			2.5	V	
Low Speed Output Current		-20	20	mA	

Table 4. Recommended Operating Conditions

Recommended Operating Conditions specify parameters for which the electrical and optical characteristics hold unless otherwise noted. Optical and electrical characteristics are not defined for operation outside the Recommended Operating Conditions, reliability is not implied and damage to the module may occur for such operation over an extended period of time.

Parameter	Symbol	Minimum	Maximum	Unit	Notes
Case Operating Temperature	T _C	0	70	°C	Note 2
Module Supply Voltage	V _{ccT} , V _{ccR}	3.135	3.465	V	Figure 3
Host Supply Voltage	V _{ccHost}	3.14	3.46	V	
Signal Rate 1-10.3125 GBd		-100	100	ppm	
Power Supply Noise Tolerance			66	10Hz to 10MHz	Figure 3
Tx Input Single Ended DC Voltage Tolerance (Ref V _{eeT})	V	-0.3	4.0	V	
Rx Output Single Ended Voltage Tolerance	V	-0.3	4.0	V	
Bend Radius			30	mm	

Table 5. Low Speed Signal Electrical Characteristics

The following characteristics are defined over the Recommended Operating Conditions unless otherwise noted. Typical values are for T_c = 40°C. V_{ccT} and V_{ccR} = 3.3 V.

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
Module Supply Current	I _{CC}		83	107	mA	Note 3
Power Dissipation	P _{DISS}		275	350	mW	Note 4
TX_FAULT, RX_LOS	I _{OH}	- 50		+ 37.5	μA	Note 5
	V _{OL}	-0.3		0.4	V	
TX_DISABLE	V _{IH}	2.0		V _{ccT} + 0.3	V	Note 6
	V _{IL}	-0.3		0.8	V	

Notes:

1. The module supply voltages, V_{ccT} and V_{ccR} must not differ by more than 0.5 V or damage to the device may occur.
2. Ambient operating temperature limits are based on the Case Operating Temperature limits and are subject to the host system thermal design.
3. Supply current includes both V_{ccT} and V_{ccR} connections.
4. Per port
5. Measured with a 4.7 kΩ load to V_{ccHost}.
6. TX_DISABLE has an internal 4.7 kΩ to 10 kΩ pull-up to V_{ccT}

Table 6. High Speed Signal Electrical Characteristics

The following characteristics are defined over the Recommended Operating Conditions unless otherwise noted. Typical values are for Tc = 40°C. VccT and VccR = 3.3 V.

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
Tx Input Differential Voltage (TD +/-)	V _I	180		700	mV	Note 1; see Figure 3b
Tx Input Mask						See Figure 3b
Tx Input AC Common Mode Voltage Tolerance				15	mV (RMS)	
Tx Input Differential S-parameter (100 Ω Ref.)	SDD11					Note 3
Tx Input Differential to Common Mode Conversion (25 Ω Ref.)	SCD11			-10	dB	0.01-11.1 GHz
Rx Output Differential Voltage (RD +/-)	V _O	300		850	mV	Note 2
Rx Output Termination Mismatch @ 1MHz	ΔZ _m			5	%	
Rx Output AC Common Mode Voltage				7.5	mV (RMS)	Note 5
Rx Output Output Rise and Fall Time (20% to 80%)	tr, tf	28			ps	
Rx Output Total Jitter	TJ			0.70	Ulp-p	Note 7
Rx Output Deterministic Jitter	DJ			0.42	Ulp-p	
Rx Output Differential S-parameter	SDD22					Note 4
Rx Output Common Mode Reflection Coefficient (25 Ω Ref.)	SCC22			Note 6 -3	dB dB	0.01-2.5 GHz 2.5-11.1 GHz
Receiver Output Eye Mask						See Figure 3b

Notes:

1. Internally AC coupled and terminated (100 Ohm differential).
2. Internally AC coupled but requires an external load termination (100 Ohm differential).
3. Maximum reflection coefficient is expressed as $SDD11 = \text{Max}(-12 + 2 \cdot \sqrt{f}, -6.3 + 13 \cdot \log_{10}(f/5.5))$, for f in GHz.
4. Maximum reflection coefficient is expressed as $SDD22 = \text{Max}(-12 + 2 \cdot \sqrt{f}, -6.3 + 13 \cdot \log_{10}(f/5.5))$, for f in GHz.
5. The RMS value is measured by calculating the standard deviation of the histogram for one UI of the common mode signal.
6. Maximum reflection coefficient given by equation $SCC22(\text{dB}) < -7 + 1.6 \times f$, with f in GHz.
7. TJ measured at 1e-12

Figure 3a. Receiver Electrical Optical Eye Mask Definition

Figure 3b. Transmitter Differential Input Compliance Mask at B

Table 7. Two-Wire Interface Electrical Characteristics

Parameter	Symbol	Minimum	Maximum	Unit	Conditions
Host Vcc Range	VccHTWI	3.135	3.465	V	
SCL and SDA	V _{OL}	0.0	0.40	V	Rp ^[1] pulled to VccHTWI, measured at host side of connector
	V _{OH}	VccHTWI - 0.5	VccHTWI + 0.3	V	
SCL and SDA	V _{IL}	-0.3	VccT*0.3	V	
	V _{IH}	VccT*0.7	VccT + 0.5	V	
Input Current on the SCL and SDA Contacts	I _I	-10	10	μA	
Capacitance on SCL and SDA Contacts	C _i ^[2]		14	pF	
Total bus capacitance for SCL and for SDA	C _b ^[3]		100	pF	At 400 kHz, 3.0 kΩ Rp, max At 100 kHz, 8.0 kΩ Rp, max
			290	pF	At 400 kHz, 1.1 kΩRp, max At 100 kHz, 2.75 kΩ Rp, max

Notes:

1. Rp is the pull up resistor. Active bus termination may be used by the host in place of a pullup resistor. Pull ups can be connected to various power supplies, however the host board design shall ensure that no module contact has voltage exceeding VccT or VccR by 0.5 V nor requires the module to sink more than 3.0 mA current.
2. C_i is the capacitance looking into the module SCL and SDA contacts
3. C_b is the total bus capacitance on the SCL or SDA bus.

Table 8. Control Functions: Low Speed Signals Timing Characteristics

Parameter	Symbol	Maximum	Units	Notes
Time to Initialize	t _{inti}	300	ms	Note 1
TX_DISABLE Assert + RX_LOS Assert Time	t _{los_on}	110	us	Note 2
TX_DISABLE Negate + RX_LOS Deassert Time	t _{los_off}	2.1	ms	Note 3

Notes:

1. Time from power on or falling edge of TX_DISABLE to when the modulated optical output rises above 90% of nominal (not measurable in the Active Optical Cable) and the Two-Wire interface is available.
2. The maximum time between (a) when the near-end AOC-end has TX_DISABLE asserted until (b) RX_LOS is declared/asserted on the far-end AOC-end. There is also a small delay for the signal transit time through the optical cable, however, this is a small effect: light propagating through fiber ~ 5ns per meter. A 10 ms interval between assertions of TX_DISABLE is required.
3. The maximum time between (a) when the near-end AOC-end has TX_DISABLE negated until (b) RX_LOS is deasserted on the far-end AOC-end. There is also a small delay for the signal to transit time through the optical cable, however, this is a small effect: light propagating through fiber ~ 5 ns per meter

20 m	+2%/-0 cm

Note:

Cable Length is defined as the length of the fiber only (not including the SFP+ module-ends).

Figure 6. Optical fiber details

Table 11. Optical Fiber Specifications

Parameter	Specification
Tight buffer color	orange, yellow
Tight buffer material	PVC
Tight buffer diameter mm	0.60 ± 0.05
Fiber type	62.5/125 (OFS) Bandwith:160 MHz.km @ 850 nm
Strength member	Aramid yarns
Jacket color	Orange
Jacket material	PVC
Cable diameter mm	3.0 ± 0.1
Cable weight Kg/km	7.0
Min. bending radius mm	30
Attenuation dB/km	≤ 3.5 at 850 nm ≤ 1.5 at 1300 nm
Short tension N	120
Short crush N/100mm	500
Operation temperature °C	-20~70
