What is area reflective type?

The sensor emits a ray of light toward the human body and detects the distance and determine whether there is a person within a given distance of the sensor. If the sensor detects a person, it sets an output non-contact switch to ON.

Compliance with RoHS Directive

FEATURES

1. Now even more miniature.

The new thin type cuts 35% from the thickness of the previous short type. Device installing is now easier than ever.

Existing short type
W10 x H20 x D19.5 mm
W.394 x H.787 x D.768 inch

Thin short type
W10 x H20 x D12.7 mm
W.394 x H.787 x D.500 inch

*"W" and "H" are detection value measurements.

2. Certain detection unaffected by the reflectance of the object

The sensor can provide stable detection that is not affected by the condition (color or material of the clothing) or parts (skin, hair, etc.) of the object being monitored. (Reflectance 18% to 90%). Excellent performance even when the detection surface is dirty.

3. Only connecting DC power supply for operating

Built-in oscillation circuit type obviates the hitherto existing need for start signal input.

4. Use in adjacent positions is possible

These sensors can be located in adjacent positions, because the timing of the external trigger signals can be adjusted so that the beam frequency of each adjacent sensor will not interfere with the other.

5. Battery drive possible

By applying longer interval for the trigger signal, you can reduce the total power consumption.

6. Can be used with a number of different supply voltages.

- 1) The 5V DC type (4.5 to 6.5V DC)
- 2) The free-ranging power type (6.5 to 27V DC)

They support the DC power supplies of electronic products and equipment in general.

*The thin short type is only available for 5V DC.

7. The open collector output system makes for easy load drive.

These sensors provide a continuous output during detection because the output system makes it easy to drive the load.

They achieve an output performance of 30V, Built-in oscillation circuit type: 100 mA, External triggering type: 10 mA (Thin short type: 100 mA). Also, the thin short type is available in a PNP open collector type in addition to a NPN open collector type.

APPLICATIONS

1. Water-based product market

- Automatic lighting of wash basin units
- Toilets

2. Stores and financial instructions

- Automatic doors
- Automatic lighting
- Cash dispensing machines
- Automatic teller machines

3. Amusement market

- Visitor detecting sensors
- Automatic lighting for game display

4. Medical field

- Non-contact switch

5. Others

- Automatic ticket gates
- Seat-taking sensors
- Detection of passengers getting on and off a bus

Notes: 1. Detecting an object within the maximum preset detection distance.

$$2. \text{Distance deviation} = \frac{a-b}{a} \times 100 (\%)$$

a: detection distance of detection target with reflectance of 90%.
b: detection distance of standard detection target with reflectance of 18%.

		Output OFF	Minimum	—				Note 2: *a
			Typical	2.2mA		5V DC type: 2.2mA/Free-ranging type: 3.1mA		
			Maximum	6.2mA		5V DC type: 6.2mA/Free-ranging type: 7.2mA		
Output ON	Minimum	—				Note 2: *c		
	Typical	4.2mA	6.2mA	5V DC type: 2.4mA/Free-ranging type: 3.3mA				
	Maximum	8.2mA	12.5mA	5V DC type: 8.2mA/Free-ranging type: 9.3mA				
Measuring cycle (Trigger interval)	Minimum	Tt	5ms/cycle					
External trigger	Pulse width	Minimum	20ms					
		Maximum	1/2Tt					
	Level	Maximum	V _{TL}	0.8V				
		Minimum	V _{TH}	3V				
Response performance: time from trigger pulse fall to detection output	Maximum	Tr	5ms					
Output characteristics	Remain voltage	Maximum	Vr	1 V DC	1.2 V DC	1 V	I = 10 mA	
	Leakage current	Maximum	II	5mA		3mA	V = 30 mA	

- Notes: 1. The thin short type is only available for 5V DC.
 2. The ratio between the 4 operating modes (*a to *d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

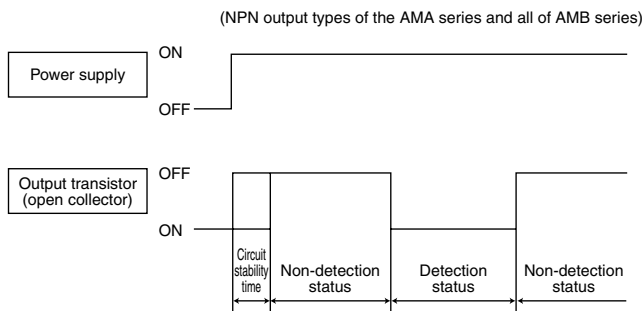

3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

4. The output transistor is open collector. The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

TIMING CHART

1. Built-in oscillation circuit type

- Notes: 1. Circuit stability time : Max. 12 ms
 2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

2. External triggering type

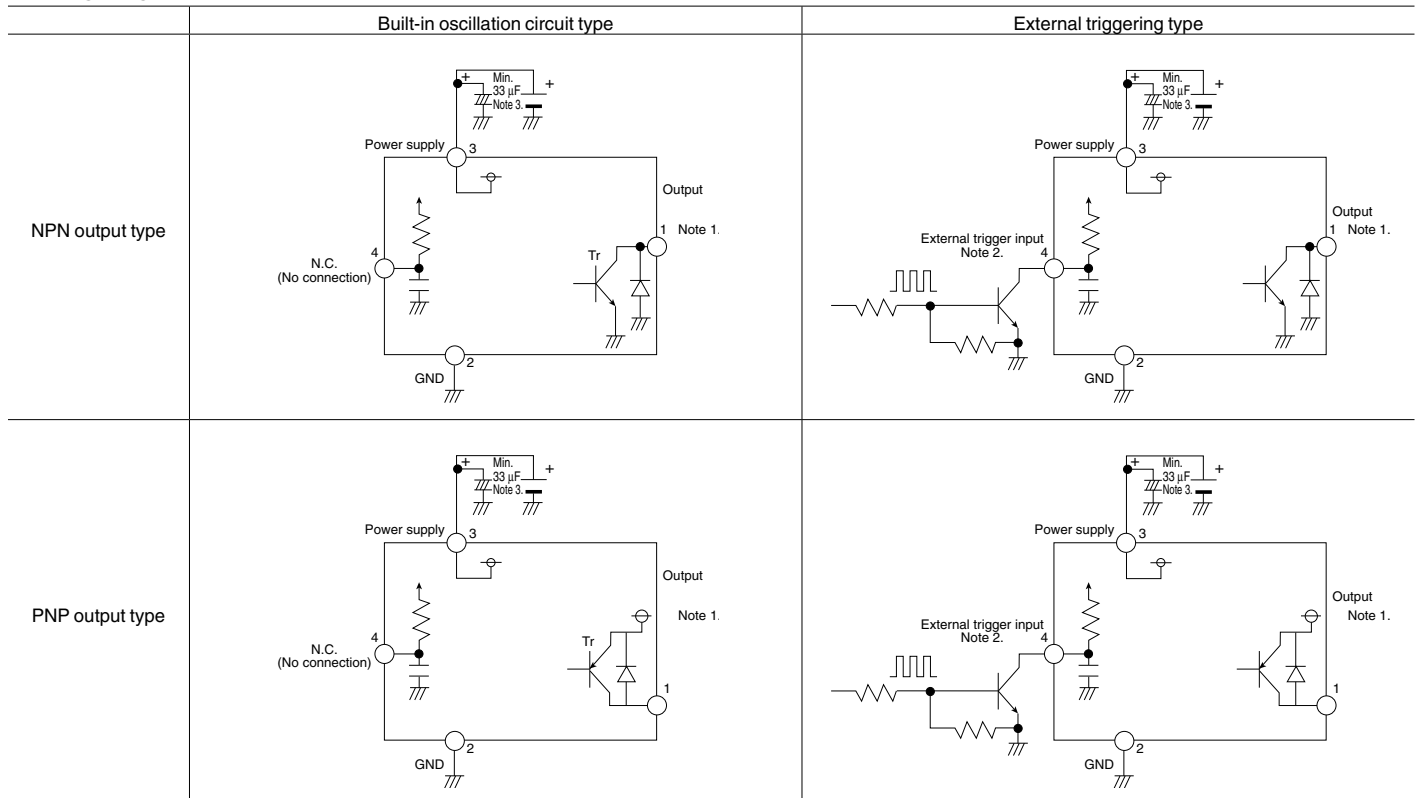

- Notes: 1. Circuit stability time : Max. 12 ms
 2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

Note: The sensor recognizes at the V_{TH} / V_{TL} edge of an external trigger that the external trigger has been input.

HOW TO USE

• Wiring diagram of connector

- Notes: 1. The output transistor has an open collector structure.
- Detection status: Output transistor ON (connected to GND)
 - Non-detection status: Output transistor OFF (open state)
2. The status of the external trigger input is as follows:
- Open at the high level
 - GND (less than 0.8V) at the low level
- Under no circumstances must a high-level voltage be applied.
3. To maintain the power supply noise performance, be certain to connect a capacitor (33mF or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

REFERENCE DATA

Operating region characteristics

- How to interpret the graph

Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

Operating area within the dotted lines

Objects that enter the entire area are detected.

Note: If only part of the object is in the detection area, it is not detected.

Operating area within the solid lines

Objects that even partially enter the area are detected.

OPTIONAL

mm inch

1. Connector with cable (for AMB series) AMV9001

Note: Mistaken cable assembly can cause damage to the internal circuits, so please check the power cord before switching ON. (Particular care must be taken as to avoid reverse connection of the power.)

2. Connector with cable (for AMA series) AMV9002

NOTES

1. Environment

- Avoid using the sensor in environments containing excessive amounts of steam, dust, corrosive gas, or where organic solvents are present.
- When the sensor is used in noisy environments, connect a capacitor (minimum 33 μ F) across its power input terminals.

2. Wiring

- Check all wiring before applying power. Incorrect wiring may damage the internal circuit (in particular, check that the connection to the power supply is not reversed.)
- Avoid excessive removing and replacing of the connector.

3. Detector surface (Optical surface)

- Keep the detector surface clean. Excessive dust or dirt on the detector surface will deteriorate the sensing performance.
- Do not allow condensation or freezing to occur on the surface of the sensor. If condensation or freezing does occur at low temperatures, the sensor may not detect objects correctly.

3) This product is designed to detect the existence of human body. The sensor will not detect objects consisting of a low reflective material (e.g., an object coated with black rubber, etc.) or of a highly reflective material (e.g., mirror, glass, coated paper, etc.)

4) The front surface of the lens and case are made of polycarbonate resin and can withstand water, alcohol, oils, salts and weak acids. Other fluids such as alkalines, aromatic hydrocarbons and halogenated hydrocarbons may melt or swell the lens and case, please do not have such fluids touch the lens and case.

5) If you use the sensor with a cover or filter connected to the front of the sensor, the sensor may detect the cover itself, the detection distance can change, and unstable operation can result.

6) When multiple sensors are to be used side by side, please verify that there will be no mutual interference by installing them with the proper spacing, depending on the type as shown below.

Model number	Sensor spacing
AMB1 series	5 cm 1.969 inch
AMA1 series	8 cm 3.150 inch
AMB2 series	10 cm 3.937 inch
AMB3 series	20 cm 7.874 inch

7) To protect the inner circuit, wiring should be max. 3 m 9.843 ft..

4. Recommended installation procedure

Install the photoelectric sensor so that it is orientated correctly in relation to the pass directions of the target objects as shown in the figure below.

* → stands for pass direction of the target object.

For the general precautions, refer to the Notes for Motion Sensors on next page.
