### SELECTION GUIDE

Part Number	Emitting Color (Material)	Lens Type	$\Phi_e$ (mW) <sup>[2]</sup> @ 20mA		Viewing Angle <sup>[1]</sup>
			Min.	Typ.	2θ1/2
ATS2012UV395	Ultraviolet (InGaN)	Water Clear	10	16	150°

Notes:  
 1.  $\theta_{1/2}$  is the angle from optical centerline where the radiant intensity is 1/2 of the optical peak value.  
 2. Radiant flux: +/-15%.  
 3. Radiant flux value is traceable to CIE127-2007 standards.

## PACKING & LABEL SPECIFICATIONS

## HANDLING PRECAUTIONS

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force. As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

1. Handle the component along the side surfaces by using forceps or appropriate tools.
2. Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry.
3. Do not stack together assembled PCBs containing exposed LEDs. Impact may scratch the silicone lens

4. As silicone encapsulation is permeable to gases, some corrosive substances such as H<sub>2</sub>S might corrode silver plating of lead frame. Special care should be taken if an LED with silicone encapsulation is to be used near such substances.
