**OPERATION**

1. Holding the extractor tool between the thumb and index finger, visually center the extractor on the housing. See Figures 1.
2. Align one side of the extractor tool grippers with the slots on that side of the housing. This will help guide the extraction tool into the housing slots until all the grippers are positioned into the housing slots. See Figure 2.

**Note:** If any of the wire cables are between the tool and the housing, move them off to one side of the housing to create a clear path for the extractor tool to line up with the housing slots.

3. Squeeze the extractor tool grippers together to grip the housing on both sides by the slots, make sure all fingers of the extractor tool are sitting on the inside of the housing slots.
4. With constant pressure on the extractor tool grippers, gently pull the housing straight up and away from the header mounted to the PC board until the housing snapped out of the header. See Figure 3.

Molex does not offer repair parts for Extractor Tools due to the inexpensive nature of these tools.

**CAUTION:** This extractor tool should be used to extract the housing only. Using it for unintended purposes may cause injury or damage to parts. Be careful not to damage the housing slots.

**CAUTION:** Molex specifications are valid only when used with Molex housings and tooling.
