

Solid State Relays Industrial, Rear Integrated Heatsink 3-Phase w LED Types RJ2A, RJ3A

- AC Semiconductor contactor
- Two and three pole switching types
- Direct copper bonding (DCB) technology
- LED indication
- Integrated over-voltage protection
- Housing free of moulding mass
- 2 Input ranges: 5 - 32 VDC and 24-275VAC/24-190VDC
- Operational ratings: up to 3x32AAC, 600VAC
- Blocking voltage: Up to 1200V_p
- Opto-isolation > 4000 VAC_{rms}

Product Description

This product is designed in such a way as to replace electro-mechanical contactors, especially when switching is frequent. It has an integrated heatsink and over-voltage protection. The heatsink is moved to the back for optimal space saving in the panel and easy wire mounting at the front of the relay. The relay with antiparallel thyristor output is the most widely used industrial SSR

due to its multiple application possibilities and robust construction. This relay can be used for resistive and inductive loads. The zero switching relay switches ON when the sinusoidal curve crosses zero and switches OFF when the current crosses zero. A green and a red LED give status of the control input and alarm respectively.

Notes

- 1 Basic models with DC control input (without over-temperature protection or fan) have both U-type and E-type terminal connections
- 2 All models with over-temperature protection option (suffix "P") or AC control input are only available with type "E" terminals
- 3 Fan switching is internally controlled. Fan requires an external supply connected to the fan supply input(s)
- 4 With integrated fan and over-temperature protection - fan will automatically switch on when necessary

Safety

When using a semiconductor contactor, the electric configuration is split into a safety part and a control part. In the safety part the isolation of the load from the mains is assured by inserting switchgear that provides galvanic isolation from the power supply. A contactor or isolator can be mounted in series with the Solid State Relay to achieve this isolation. The contactor can be a very economical type as the switching is done by the Solid State Relay.
