

MDCSK51-22-15-A

Ruland MDCSK51-22-15-A, 22mm x 15mm Single Disc Coupling, Aluminum, Clamp Style With Keyway, 50.8mm OD, 46.1mm Length

Description

Ruland MDCSK51-22-15-A is a clamp single disc coupling with 22mm x 15mm bores, 50.8mm OD, 46.1mm length, and 6mm x 5mm keyways. It is zero-backlash and has a balanced design for reduced vibration at high speeds. The single disc design is comprised of two anodized aluminum hubs and two sets of thin stainless steel disc springs which can accommodate angular misalignment and axial motion, however does not allow for any parallel misalignment. MDCSK51-22-15-A is lightweight and has low inertia making it well suited for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland manufactures MDCSK51-22-15-A to be torisionally rigid and an excellent fit for precise positioning stepper servo applications commonly found in semiconductor, solar, printing, machine tool, and test and measurement systems. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. MDCSK51-22-15-A is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Note 3 Performance ratings are for guidance only. The user must determine suitability for a particular	lar application.
Note 4 Torque ratings for the couplings are based on the physical limitations/failure point of the disc normal/typical conditions the hubs are capable of holding up to the rated torque of the disc cases, especially when the smallest standard bores are used or where shafts are undersize shaft is possible below the rated torque of the disc springs. Keyways are available to provide	springs. In some ed, slippage on th

torque capacity in the shaft/hub connection when required. Please consult technical support for more assistance.
MARNING This product can expose you to chemicals including Ethylene Thiourea and Nickel (metallic), known to the State of California to cause cancer, and Ethylene Thiourea known to the State of California to cause birth defects or other reproductive harm. For more information go to <u>www.P65Warnings.ca.gov</u> .
 Align the bores of the MDCSK51-22-15-A single disc coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (<i>Angular Misialignment:</i> 1.0°, <i>Parallel Misalignment:</i> 0.00 mm, <i>Axial Motion:</i> 0.32 mm) Fully tighten the M5 screw on the first hub to the recommended seating torque of 9.5 Nm using a 4.0 mm hex torque wrench. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length. Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 22.2 mm.
