Descriptions :

- The Chip-LED Taping is much smaller than lead frame type components, thus enable smaller board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
- Besides, lightweight makes them ideal for miniature application, etc.

● Soldering heat reliability (DIP):

Please refer to the following figure :

● Precautions For Use :

- Over- current- proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen)

- Storage

1. The operation of temperature and R.H. are : 5°C ~ 30°C, 60%R.H. Max..
2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a dampproof box with desiccating reagent. Considering the tape life, we suggest our customers to use our products within 1.5 year (from production date) .
3. It's recommended to bake before soldering when the package is unsealed after 72 hrs. The condition is : 60°C±5°C for 15hrs.
