

Features

- This Circuit is Processed in Accordance to Mil-Std-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Digital Programmability
- High Slew Rate (Uncompensated) 20V/μs Min
(Compensated) 6V/μs Min
- Wide Gain Bandwidth
(Uncompensated) 20MHz Min
(Compensated) 4MHz Min
- High Gain 50kV/V Min
- Low Offset Current 50nA Max
- Single Capacitor Compensation For Unity Gain
- DTL/TTL Compatible Inputs

Applications

- Single Selection/Multiplexing
- Op Amp Gain Stage
- Frequency Oscillator
- Filter Characteristics
- Add-Subtract Functions
- Integrator Characteristics
- Comparator Levels

Description

The HA-2400/883 is a four channel programmable amplifier providing a level of versatility unsurpassed by any other monolithic operational amplifier. Versatility is achieved by employing four input amplifier channels, any one (or none) of which may be electronically selected and connected to a single output stage through DTL/TTL compatible address inputs. The device formed by the output and the selected pair of inputs is an op amp which delivers excellent slew rate, gain bandwidth and power bandwidth performance. Other advantages features for these dielectrically isolated amplifiers include high voltage gain and input impedance coupled with low input offset voltage and offset current. External compensation is not required on this device at closed loop gains greater than 10.

Each channel of the HA-2400/883 can be controlled and operated with suitable feedback networks in any of the standard op amp configurations. This specialization makes these amplifiers excellent components for multiplexing, signal selection, and mathematical function designs. With 20V/μs slew rate, 20MHz gain bandwidth, and low input bias currents makes these devices ideal building blocks for signal generators, active filters, and data acquisition designs. Programmability coupled with 9mV maximum offset voltage and 50nA offset current makes these amplifiers outstanding components for the signal conditioning circuits.

The HA-2400/883 is available in the 16 pin Dual-in-Line Ceramic package and a 20 pin LCC package. The HA-2400/883 is specified from -55°C to +125°C.

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals	45V
Differential Input Voltage	$\pm V_{SUPPLY}$
Voltage at Either Input Terminal	V+ to V-
Digital Input Voltage	-0.76V to +10V
Peak Output Current (Short Circuit Protected)	$I_{SC} < \pm 33mA$
Junction Temperature (T_J)	+175°C
Storage Temperature Range	-65°C to +150°C
ESD Rating	<2000V
Lead Temperature (Soldering 10 sec)	+275°C

CAUTION: Absolute maximum ratings are limiting values, applied individually beyond which the serviceability of the circuit may be impaired. Functional operability under any of these conditions is not necessarily implied.
