

## 16-Channel (2 Banks of 8-Channels), High Voltage, Analog Switch With Bleed Resistors

### Features

- ▶ HVCMOS® technology for high performance
- ▶ 220V operating conditions
- ▶ 22Ω typical output on-resistance
- ▶ Integrated bleed resistors on the outputs
- ▶ 3.3V and 5.0V CMOS logic compatibility
- ▶ Very low quiescent power dissipation (-10μA)
- ▶ -45dB min off isolation at 7.5MHz
- ▶ Low parasitic capacitance
- ▶ Excellent noise immunity
- ▶ Flexible operating supply voltages
- ▶ 48-lead LQFP package

### Applications

- ▶ Medical ultrasound imaging
- ▶ Non-destructive evaluation

### General Description

The Supertex HV2731 is a 220V, 16-channel, high voltage, analog switch integrated circuit (IC) with output bleed resistors ( $R_{INT}$ ). The output switches are configured as 2 sets of 8 single pole, single throw analog switches. The IC is intended to be used in applications requiring high voltage switching controlled by low voltage control signals, such as ultrasound imaging.

The 2 sets of 8 analog switches are controlled by 2 input logic controls,  $D_{IN1}$  and  $D_{IN2}$ . A logic high on  $D_{IN1}$  will turn on switches 0 to 7 and a logic high on  $D_{IN2}$  will turn on switches 8 to 15. The bleed resistors help to significantly reduce voltage built up on capacitive loads such as piezoelectric transducers connected to the outputs.

Using HVCMOS® technology, this device combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

\_\_\_\_ = "Green" Packaging  
\*May be part of top marking

Package may or may not include the following marks: Si or

48-Lead LQFP (FG)

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Recommended Operating Conditions

Sym	Parameter	Value
V <sub>DD</sub>	Logic power supply voltage	3.0V to 5.5V
V <sub>PP</sub>	Positive driver supply	+50V to +110V
V <sub>NN</sub>	Negative high voltage supply	-10V to V <sub>PP</sub> -220V
V <sub>IH</sub>	High level input voltage	V <sub>DD</sub> -1.0V to V <sub>DD</sub>
V <sub>IL</sub>	Low-level input voltage	0V to 1.0V
V <sub>SIG</sub>	Analog signal voltage peak-to-peak	V <sub>NN</sub> +10V to V <sub>PP</sub> -10V
T <sub>A</sub>	Operating free air temperature	0°C to 70°C

Notes:

- Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.
- V<sub>SIG</sub> must be V<sub>NN</sub> ≤ V<sub>SIG</sub> ≤ V<sub>PP</sub> or floating during power up/down transition.
- Rise and fall times of power supplies V<sub>DD</sub>, V<sub>PP</sub> and V<sub>NN</sub> should not be less than 1.0msec.

## DC Electrical Characteristics (Over recommended operating conditions unless otherwise specified)

Sym	Parameter	0°C		+25°C			+70°C		Units	Conditions
