32-bit Microcontroller Families
Industry's Broadest and Most Innovative 32-bit MCU Portfolio

www.microchip.com/32bit
MICROCHIP

Building on the heritage of Microchip Technology's world-leading 8- and 16-bit microcontrollers, the 32-bit family offers a wide range of products from the industry's lowest-power to highest-performance MCUs coupled with novel and easy-to-use software solutions. With a rich ecosystem of development tools, integrated development environments and third-party partners, Microchip's families of 32-bit microcontrollers accelerate a vast array of embedded designs ranging from secured Internet of Things (IoT) to Functional Safety applications to general-purpose embedded control.

Breakthrough Innovative Features and Solutions

- Ultra-low power: < 25 µA/MHz in Active Mode and 100 nA in Sleep Mode
- High Performance: up to 600 DMIPS performance with double-precision Hardware Floating Point and up to 2 MB dual-panel Flash and 512 KB SRAM
- Enhanced Peripheral Touch Controller (PTC): dedicated hardware peripheral for robust capacitive touch solutions facilitating parallel acquisition, superior water tolerance and noise immunity
- Functional Safety Ready portfolio supporting IEC 60730(Class B), IEC 61508 (SIL) & ISO 26262 (ASIL) safety standards
- Chip-level security and Arm® TrustZone® Technology
- SleepWalking: ability of the peripherals to perform a desired task while the CPU is asleep
- Event system: enables inter-peripheral communication and efficiently offloads the CPU
- 2D Graphics Processing Unit (GPU) and 3-layer Graphics Controller with up to 24-bit color
- picoPower® Technology and eXtreme Low Power (XLP)
- Low-Cost Controllerless Graphics (LCCG) solutions
- Integrated AES and Public Key Cryptography Controller (PUKCC)
- Motor control PWM and motor encoder interface
- Compact packaging options: chip scale packages down to 1.9 × 2.4 mm
- Advanced analog and connectivity peripherals
- microMIPS™ Instruction Set Architecture (ISA) for improved code density
- Dual-panel Flash options for live updates
- High performance ADC with up to 25.45 Msps in 12-bit mode or 33.79 Msps in 8-bit mode

Series Descriptions

- **SAMD10/11:** Smaller member of SAMD family with serial interfaces, timers, analog comparators and PTC. SAMD11 adds FS USB.

- **SAMD20/21:** Offers large memory options with rich set of peripherals including PTC, and provides flexibility and ease-of-use with low power consumption. SAMD21 adds FS USB, DMA and timer counter for control.

- **SAMDA1:** Automotive-qualified microcontrollers, featuring embedded PTC enabling efficient button/slider/wheel solutions for automotive HMI and LIN applications.

- **SAML21/22:** Ultra-low power family with 12-bit ADC, analog comparators, PTC, security functions, TC for control and CCL. SAML21 runs at 48 MHz, consumes under 35 µA/MHz in active mode and 200 nA in sleep mode and features op amps, FS USB Host and Device and 12-bit DAC. SAML22 runs at 32 MHz and comes with an integrated SLCD controller, FS USB Device and 100-pin options.

- **SAMC20/21:** 5V MCU family for appliance and industrial applications. This family features 12-bit ADCs, hardware Divide and Square Root (DIVAS), PTC and high-end timers/counters. SAMC21 adds 16-bit Delta-Sigma ADC, CAN FD and CAN 2.0A/B.

- **SAML10/11:** Ultra-low power family with 12-bit ADC, op amps, enhanced PTC. They run at 32 MHz with Arm Cortex M23 core and consume under 25 µA/MHz in active and 100 nA in sleep. SAML11 adds chip-level security, secure boot, Arm TrustZone and secure key provisioning options with Secure Thingz Secure Deploy.

- **SAML11-KPH** variants provide all the hardware security features of SAML11. Additionally, they are securely pre-provisioned with Trustonic Root of Trust (RoT) and are supported by Trustonic Kinibi-M SDK.

SAMD5/E5, SAM4 and SAMG Series

Series Descriptions

• **SAM4N:** Ideal for a wide range of applications in industrial automation, consumer and appliance and energy metering markets. Pin compatible with SAM3S, SAM3N and SAM7S.

• **SAM4S:** Features a multi-layer bus matrix, multi-channel Direct Memory Access (DMA) and distributed memory to support high data-rate communication.

• **SAM4E:** Offers a rich set of connectivity peripherals including 10/100 Mbps Ethernet MAC supporting IEEE 1588 and dual CAN 2.0B as well as single-precision FPU.

• **SAM4L:** Ideal for power-sensitive designs delivering down to 90 µA/MHz in Active Mode as well as Sleep Mode with full RAM retention of 1.5 µA and wake-up time of 1.5 µs.

• **SAMG:** Optimized for ultra-low power and high performance. Small form factor bundled with FPU, DMA and good SRAM-to-Flash ratio in a very tiny 2.8 × 2.8 mm WLCSP.

• **SAMD5/E5:** Ideal for connectivity and security applications. Runs at 120 MHz and consumes under 65 µA/MHz in active mode, features PTC, Parallel Capture Control (PCC) for image sensing, Public Key Cryptography Controller (PUKCC) and Integrity Check Module (ICM) based on Secure Hash Algorithm.

SAMS70/E70/V7x Series

High Performance

- Arm Cortex-M7: 300 MHz, 1500 CoreMark™
- Single- and double-precision hardware Floating Point Unit (FPU)
- 16 KB+ 16 KB of I&D cache with ECC
- Execution in place from on-chip Flash NVM connected to QSPI and EBI
- Multi-port SRAM minimizing latency
- User-configurable SRAM and TCM size

Advanced Analog Front-End (AFE)

- Dual S&H, 12-bit ADC and 16-bit hardware averaging
- Differential input, programmable gain
- Automatic gain and offset error correction
- DMA support, hardware and software trigger

Features

- Hi-Speed USB host/device with integrated PHY
- Memory integrity check monitor
- CMOS camera interface
- Ethernet and dual CAN on SAME70 and SAMV71
- Sleepwalking on UART and I²C
- Event system

Temperature Options

- −40°C to +105°C
- AEC-Q100, −40°C to +105°C (Grade 2)

PIC32MX1/2/5 and PIC32MM Series

Baseline PIC32 Family Features	PIC32MX1	PIC32MX2	PIC32MX5	PIC32MM
• MIPS core • UART • SPI • I²C • PPS • 32-bit CRC • RTCC • WDT, BOR, POR • Timer/compare/capture • XLP • Functional Safety	40/50/72 MHz			25 MHz
	16–512 KB Flash		64–512 KB Flash	16–256 KB Flash

	10-bit 1 Msps ADC			10-bit 300 ksps, 12-bit 200 ksps ADC
	Analog Comparators			
	I²S			

Series Descriptions

- **PIC32MX1:** 32-bit family optimized for cost and performance with additional features such as DMA and PMP and more serial interfaces, comparators and ADC channels compared to the PIC32MM family. Targeted for general-purpose embedded control and graphics. *Select variants feature eXtreme Low Power (XLP) options.*

- **PIC32MX2:** Feature upgrade from PIC32MX1 with the addition of Full-Speed USB targeting cost-sensitive digital audio, graphics and USB applications. *Select variants feature eXtreme Low Power (XLP) options.*

- **PIC32MX5:** Feature upgrade from PIC32MX2 with the addition of CAN 2.0B targeting industrial, digital audio, graphics, USB and CAN applications.

- **PIC32MM:** The PIC32MM family is the lowest-power and smallest member of the PIC32 family, offering sleep modes down to 500 nA and packages as small as 4 × 4 mm which makes them suitable for low-power and space-constrained applications.

PIC32MK, PIC32MX3/4 and PIC32MX5/6/7 Series

Mid-Range PIC32 Family Features	PIC32MK	PIC32MX3	PIC32MX4	PIC32MX5	PIC32MX6	PIC32MX7
• MIPS core • UART • SPI • I²C • PPS • 32-bit CRC • RTCC • WDT, BOR, POR • Timers/compare/capture • Flash Error Code Correction (ECC) • Functional Safety	120 MHz	Up to 120 MHz		80 MHz		
	256–1024 KB Dual Bank	64–512 KB Flash				
	64–256 KB RAM	16–128 KB SRAM

	2 x FS USB Device, Host, OTG		FS USB Device, Host, OTG	FS USB Device, Host, OTG		
	4 x CAN 2.0B & CAN-FD			CAN 2.0B		Dual CAN 2.0B
	MC PWM and QEI				10/100 Ethernet MAC	
	DMA and PMP	DMA and PMP				
	25.45 Msps 12-bit mode or 33.79 Msps 8-bit mode	10-bit 1 Msps ADC				
	Op amp, 12-bit CDAC, Analog Compare	Analog Comparators				
	I²S	I²S				

Series Descriptions

- **PIC32MX3:** General-purpose 32-bit familiy with up to 120 MHz performance for complex embedded applications requiring larger code and data size.

- **PIC32MX4:** Feature upgrade from the PIC32MX3 family with the addition of Full-Speed USB targeting Bluetooth®, high-end digital audio, graphics and USB applications.

- **PIC32MX5:** Mid-range embedded connectivity family with large RAM, FS USB and CAN 2.0B targeting industrial, automotive (cabin/infotainment), USB and graphics applications.

- **PIC32MX6:** Mid-range embedded connectivity family with large RAM, FS USB and 10/100 Ethernet MAC targeting IoT, gateways, industrial, USB and graphics applications.

- **PIC32MX7:** Upgrade from the PIC32MX5 and PIC32MX6 families with a rich set of connectivity peripherals including dual CAN 2.0B, Full-Speed USB and 10/100 Ethernet MAC targeting a broad range of embedded connectivity applications.

- **PIC32MK:** Motor control and general purpose family with up to 1 MB dual panel Flash with live update, features Motor Control PWM, Quadrature Encoder Interface (QEI), four CAN modules and advanced analog. The family features high performance ADC with up to 25.45 Msps 12-bit mode or 33.79 Msps 8-bit mode.

PIC32MZ Series

Parameter	PIC32MZ EF	PIC32MZ DA
Speed	252 MHz	200 MHz
Floating Point Unit (FPU)	Yes	–
2D Graphics Processing Unit (GPU)	–	Yes
3-Layer Graphics Controller	–	Yes

SPI/I²S	6	
I²C	5	
UART	6	
Pin Count	64, 100, 124, 144	169, 176, 288
Packages	QFN, TQFP, VTLA, LQFP, TFBGA	LFBGA, LQFP

High Performance

- MIPS M-Class Core: 252 MHz, 415 DMIPS
- MIPS microAptiv Core: 200 MHz, 330 DMIPS
- Seven-stage FPU for 32-bit and 64-bit floating point math
- microMIPS mode for up to 35% smaller code size
- 32 KB I-Cache, 32 KB D-Cache
- DSP - enhanced core

High-Performance Graphics Features

- 3-Layer graphics controller with up to 24-bit color support
- High-performance 2D Graphics Processing Unit (GPU)

Advanced Analog

- 12-bit ADC
    - 18 Msps, 6 S&H, 48-channel
    - Six digital comparators and filters
    - Sleep and Idle Mode operation
- Two analog comparators with 32 programmable voltage references
- Temperature sensor with ±2°C accuracy

Features

- Dual-panel Flash for live updates
- Memory management unit for optimum embedded OS execution
- Hi-Speed USB Device/Host/OTG with PHY
- 10/100 Ethernet MAC with MII and RMII interface
- Dual CAN 2.0B with DeviceNet addressing support
- SPI/I²S for audio
- Crypto engine with TRNG
- Peripheral Pin Select (PPS) for function remap

Temperature Options

- −40°C to +85°C, −40°C to +105°C, −40°C to +125°C
- AEC-Q100 (Grade 1 −40°C to +125°C)

AVR32 Series

UC3L

Offers up to 256 KB Flash, 16 KB SRAM, 50 MHz performance and available in 48- and 64-pin options with picoPower® peripherals, CAT module, Full-Speed USB and Flashvault code protection.

UC3C

Offers up to 512 KB Flash, 68 KB SRAM, 66 MHz performance and available in 64-, 100- and 144-pin options with automotive qualification, FPU, Ethernet, USB, dual CAN, dual LIN and FlashVault code protection.

UC3D

Offers up to 128 KB Flash, 16 KB SRAM, 48 MHz performance and available in 48- 64-pin options with hardware QTouch® technology, Full-Speed USB and CAT module.

UC3A3/A4

Offers up to 256 KB Flash, 128 KB SRAM, 84 MHz performance and available in 100- and144-pin options with Hi-Speed USB, NAND Flash and SDRAM interface, SD/SDIO, AES and crypto module.

UC3A0/A1

Offers up to 512 KB Flash, 64 KB SRAM, 66 MHz performance and available in 100- and 144-pin options with Ethernet MAC, USB and SDRAM interfaces.

UC3B

Offers up to 512 KB Flash, 96 KB SRAM, 60 MHz performance and available in 48- and 64-pin options with USB and I²S.

SAM7 Series

SAM7S

Offers up to 512 KB of dual-bank Flash, 64 KB SRAM, 55 MHz performance and available in 48- and 64-pin options with Full-Speed USB, SPI, USART, I²C and 10-bit ADC.

SAM7SE

Offers up to 512 KB of dual-bank Flash and 32 KB SRAM, 55 MHz performance and available in 128- and 144-pin options with EBI (supports static memory, NAND, CompactFlash® and SDRAM), Full-Speed USB, USART, SPI, I²C and 10-bit ADC.

SAM7X

Offers up to 512 KB dual-bank Flash, 128 KB SRAM, 55 MHz performance and available in 100-pin options with Full-Speed USB, Ethernet MAC, CAN 2.0A and 2.0B, USART, SPI, I²C and 10-bit ADC.

SAM7XC

Offers up to 512 KB dual-bank Flash, 128 KB SRAM, 55 MHz performance and available in 100-pin options with two crypto blocks, Full-Speed USB, Ethernet MAC, CAN 2.0A and 2.0B, USARTs, SPI, I²C and 10-bit ADC.

SAM3 Series

SAM3N

Offers up to 64 KB Flash, 8 KB SRAM, 48 MHz performance and available in 48-, 64- and 100-pin options with touch support, USART, SPI, I²C , 10-bit ADC and 10-bit DAC.

SAM3S

Offers up to 512 KB dual-bank Flash, 64 KB SRAM, 64 MHz performance and available in 48-, 64- and 100-pin options with SDIO/SD/MMC interface, touch support, I²S, SPI, I²C, UARTs, 12-bit ADC and 12-bit DAC.

SAM3U

Offers up to 256 KB dual-bank Flash, 48 KB SRAM, 96 MHz performance and comes in 100- and 144-pin options with static memory controller, SDIO/SD/MMC interface, touch, HS USB, SPI, I²C, I²S, UARTs and 10-/12-bit ADCs.

SAM3X/A

Offers up to 512 KB dual-bank Flash with safety and security features, 96 KB SRAM, 84 MHz performance and comes in 100- and 144-pin options with NAND Flash controller, touch, dual CAN, Ethernet MAC, HS USB, SDIO/SD/MMC interface, SPI, I²C, I²S, UARTs, 12-bit ADC and 12-bit DAC.

MPLAB® Harmony Software Framework

A unified and powerful content development and delivery environment, MPLAB Harmony Software Framework together with MPLAB X Integrated Development Environment (IDE), enhances your application development experience with a set of optimized peripheral libraries, simplified drivers and modular software downloads.

It provides flexible choices spanning architectures, performance and various applications. It enables development of robust, interoperable, RTOS-friendly applications with quick and extensive support for third-party software integration. The improved MPLAB Harmony Configurator (MHC), now with a modular download manager facilitates to select and configure all MPLAB Harmony components in a graphical way, including middleware, system services and peripherals.

MPLAB Harmony Block Diagram
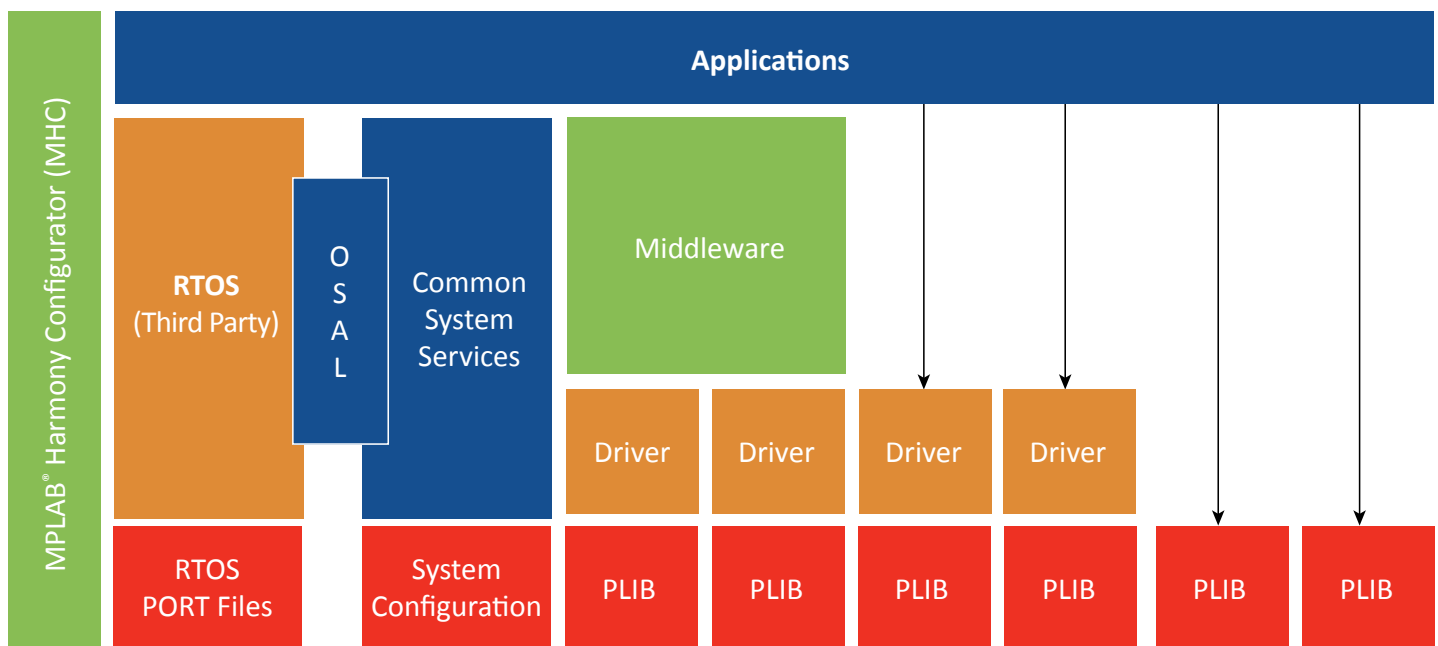

Key Benefits

- Core agnostic implementation which supports both MIPS® and Arm® Cortex® core architectures
- Offers 1000+ demo/application examples
- Code portability with consistent APIs that can be used across different device families
- Easily configurable using MPLAB Harmony Configurator's (MHC's) Graphical User Interface (GUI)
- Layered and self-contained framework includes:
  - Peripheral libraries – Hardware Abstraction Layer
  - Drivers and services
  - Reusable middleware
- Validated across 32-bit PIC® (MIPS-based) and SAM (Arm Cortex-based) MCU and MPU device families
- Fully Integrated with third-party solutions

MPLAB Harmony Collateral Offering

MPLAB Harmony Middleware Repositories

Audio Library: This repository contains a variety of audio drivers, encoders, decoders, and firmware projects that demonstrate the capabilities of the MPLAB Harmony v3 audio offerings. Each example application project describes its hardware setup, block diagram, requirements, hardware compatibility and operation.

Bluetooth Library: This repository contains the MPLAB Harmony v3 Bluetooth Package (bt). It supports a fast-to-market Bluetooth development environment for 32-bit SAM and PIC microcontrollers.

Cryptography Library: The Cryptographic library includes functions to perform encryption, decryption, hashing, authentication and compression within an embedded application. Random Number Generation (RNG) functions are also provided.

Graphics Library: The graphics repository contains the files for MPLAB Harmony Graphics Suite quick-start applications, drivers, tools, libraries and templates.

Graphics Apps Library: The graphics apps repository contains the graphics application package (GFX Apps). This is a more extensive set of highly integrated, stand-alone applications that demonstrate some of the capabilities of graphics in MPLAB Harmony v3 for 32-bit PIC and SAM microcontrollers.

Motor Control Library: This module contains motor control demonstrations implemented on 32-bit microcontrollers.

Touch Library: Use this software library for developing touch applications on 32-bit microcontrollers with a Peripheral Touch Controller. The library supports both self-capacitance and mutual-capacitance acquisition methods.

Networking (TCP/IP) Library: This repository provides a fast-to-market TCP/IP stack for 32-bit PIC and SAM microcontrollers. It contains multiple applications that demonstrate communication over TCP/IP using well-known protocols like TCP, UDP, HTTP, SMTP, etc.

USB Library: The USB module provides USB controller drivers for 32-bit PIC and SAM devices, as well as Host and Device middleware with support for common device classes.

Device Setup Repositories

Core	The core module components provide the simple-to-use abstractions of 32-bit SAM and PIC device peripherals and shared resources on which the MPLAB Harmony 3 middleware is based, including drivers, services and the Operating System Abstraction Layer (OSAL).
Chip Support Package (CSP)	The CSP module contains independent, low-level Peripheral Libraries (PLIBs) that are simple functions to initialize and control peripherals and basic device features on which MPLAB Harmony 3 drivers and services are based. The CSP supports initialization of 32-bit devices and development of simple applications that directly control peripheral hardware with minimal external dependencies.
Board Support Package (BSP)	The BSP module provides initial configuration settings for PIC and SAM Xplained development boards.
MPLAB Harmony Configurator (MHC)	The MHC repository contains the implementation of MPLAB Harmony Configurator (MHC), a Graphical User Interface (GUI) based configuration utility that accelerates the development of embedded applications using 32-bit SAM and PIC devices.
Bootloader	The bootloader module components provide a framework to develop bootloaders for SAM microcontrollers. The Bootloader Library can be used to upgrade firmware on a target device without requiring an external programmer or debugger.

Developing with SAM and AVR32 Microcontrollers

SAM and AVR32 Development Platforms

Xplained is a fast prototyping and evaluation platform for SAM and AVR32 MCUs. These low-cost, easy-to-use evaluation kits are ideal for demonstrating the features and capabilities of your selected device, and can be customized with a wide range of extension boards. Development is easy with a rich selection of example projects and code drivers.

SAMD21 Curiosity Nano Evaluation Kit (DM320119)

It is a low cost hardware development platform that provides easy access to the features of the SAMD21 MCU. It is supported by the MPLAB X Integrated Development Environment (IDE) and MPLAB Harmony v3 software development framework. The kit contains an On-Board Nano Debugger for programming and debugging and is supported by various demo examples to get started easily. The evaluation kit is compatible with the Curiosity Nano Base board (AC164162) which allows you to quickly scale and prototype your next innovative design.

Choose from six types of platforms

- **Curiosity Platform –** A fully integrated Microcontroller (MCU) development platform targeted at first-time users, makers, and those seeking a feature-rich rapid prototyping board
- **IoT Cloud Platform –** A plug and play platform for effortlessly designing secure cloud-connected systems
- **Xplained Pro** – A professional evaluation board featuring auto-identification, with an on-board debugger and standardized extension connectors
- **Xplained Mini** – An ultra-low-cost platform for evaluating low pin-count parts. It features an on-board debugger, access to all device pins, and auto-identification
- **Xplained Ultra** – An evaluation platform for high-end microcontrollers with access to high-speed data and external memory interfaces
- **Xplained** – A fast prototyping and evaluation platform for 32-bit AVR® and SAM microcontrollers

SAMC21	ATSAMC21 Motor Control Plug In Module*	MA320206
SAME54	ATSAME54 Motor Control Plug In Module*	MA320207

*Works with MCHV-2 (DM330023-2) and MCLV-2 (DM330021-2) Motor Control Development Boards

Developing With PIC32 Microcontrollers

32-bit Starter Kits and Curiosity Development Kits

Getting started is easy with any of the fully integrated Starter Kits or Curiosity Boards. They are supported by various application demos, software libraries and Board Support Packages (BSP) for faster development.

Curiosity PIC32MZ EF 2.0 Development Board (DM320209)
The Curiosity PIC32 MZ EF 2.0 Development Board is a fully integrated 32-bit development platform featuring the high performance PIC32MZ EF MCU Series. It comes with various expansion options including the MikroElektronika mikroBUS™ socket and enables users develop ethernet, Wi-Fi®, IoT, audio, graphics and general purpose embedded control applications.

It comes with an integrated programmer and debugger and is supported by several demo examples to get started easily.

Support

Microchip is committed to supporting its customers in developing products faster and more efficiently. We maintain a worldwide network of field applications engineers and technical support ready to provide product and system assistance. For more information, please visit www.microchip.com:

- Technical Support: www.microchip.com/support
- Evaluation samples of any Microchip device: www.microchip.com/samples/
- Knowledge base and peer help: www.microchip.com/forums
- Sales and Global Distribution: www.microchip.com/sales

Training

If additional training interests you, then Microchip can help. We continue to expand our technical training options, offering a growing list of courses and in-depth curriculum locally, as well as significant online resources.

- Technical Training Centers and Other Resources: www.microchip.com/training
- MASTERs Conferences: www.microchip.com/masters
