

PROTECTION PRODUCTS

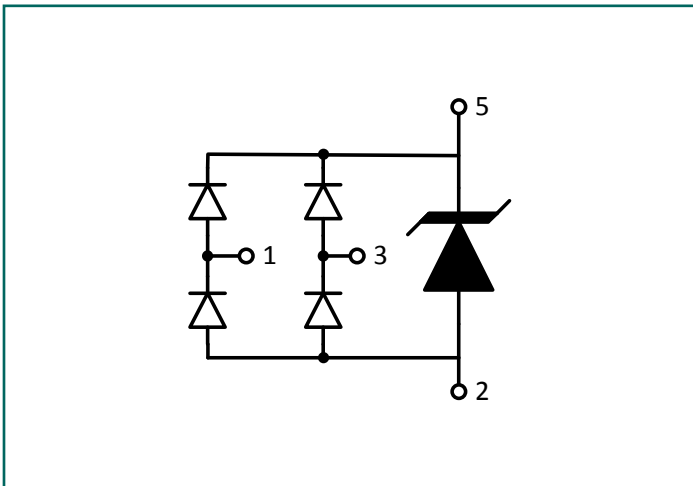

Description

TClamp[®]xx82S are specifically designed to provide secondary surge and ESD protection for G.Fast and other DSL circuit line drivers. These devices integrate low capacitance, surge-rated steering diodes with a high power transient voltage suppressor (TVS). The TVS utilizes snap-back or "crow-bar" technology to minimize device clamping voltage and features high surge current capability of 30A ($t_p=8/20\mu s$).

TClampxx82S capacitance is limited to 2.5pF maximum with a low typical capacitance variation over the operating voltage range. This ensures correct signal transmission on DSL lines. The biased bridge structure allows the device to be used in G.Fast, ADSL, and VDSL applications with with operating voltages of 8, 12, 20, and 24Vp-p.

TClampxx82S is in a 6-pin SOT-23 package. The leads are finished with lead-free matte tin. The flow-through package design simplifies PCB layout.

Circuit Diagram

Features

- Transient Protection to
 - ♦ IEC 61000-4-2 (ESD) 30kV (Air), 30kV (Contact)
 - ♦ IEC 61000-4-4 (EFT) 2kV (5/50ns)
 - ♦ IEC 61000-4-5 (Lightning) 30A (8/20 μs)
- Bias diodes prevent charging of TVS capacitance
- Working Voltage Options: 8V, 12V, 20V, 24V
- Low Capacitance: 2.5pF Maximum
- Low Capacitance Variation (1V to V_{RWM})
- Solid-State Silicon-Avalanche Technology

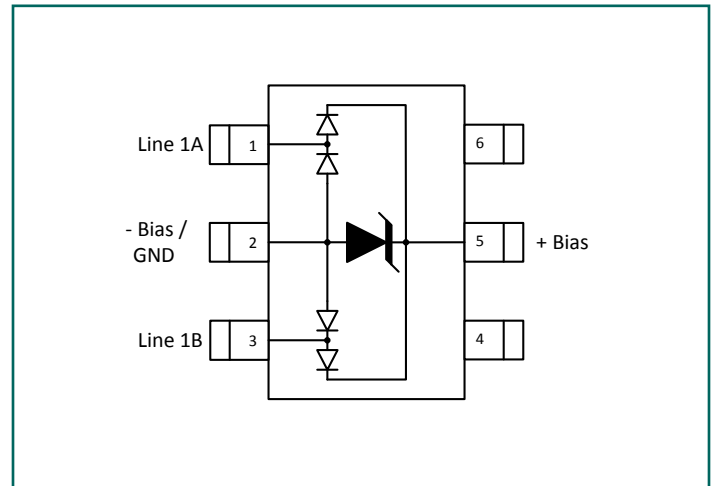

Mechanical Characteristics

- JEDEC SOT-23 6L package
- Pb-Free, Halogen Free, RoHS/WEEE Compliant
- Lead Finish: Matte Tin
- Molding Compound Flammability Rating: UL 94V-0
- Marking : Marking Code + Date Code
- Packaging : Tape and Reel

Applications

- ADSLx / VDSLx Secondary Protection
- G.Fast Line Driver Secondary Protection
- VDSL2 Class-H Line Driver Secondary Protection
- Modems
- Access Equipment
- Central Office Equipment
- Customer Premise Equipment

Pin Configuration

Absolute Maximum Ratings

Rating	Symbol	Value	Units
Peak Pulse Power (tp = 8/20μs)	P _{PK}	300	W

Applications Information

Device Connection and PCB Routing

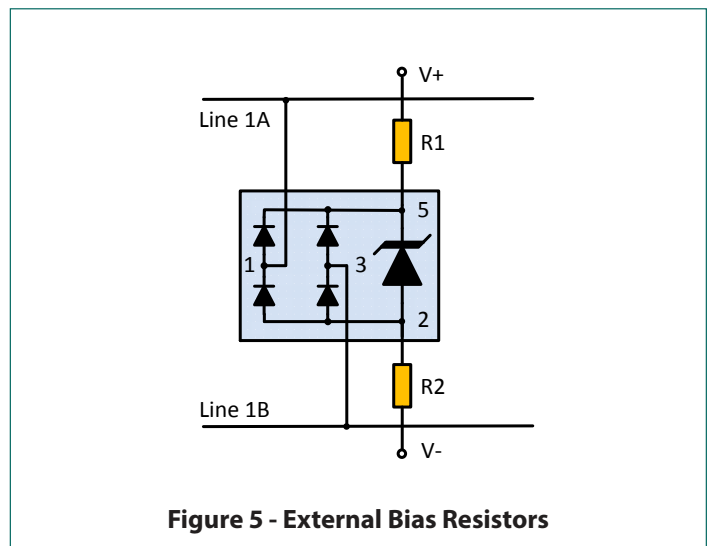

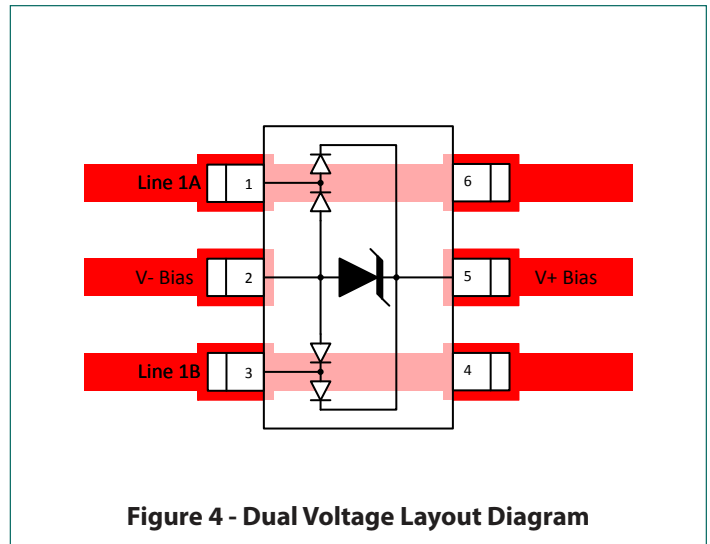

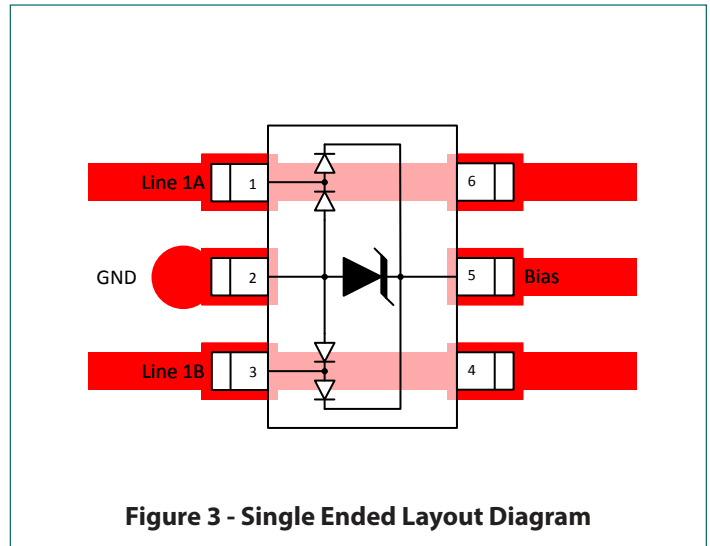

The flow-through design of TClampxx82S simplifies board layout and PCB trace routing. The device can be configured for single ended applications such as G.Fast CPE (Figure 3) or dual voltage applications such as VDSL (Figure 4). Line 1A is connected at pin1 and its trace can continue under the part and connect to pin 6, which is not connected internally to the part. A similar connection can be made for Line 1B. This layout makes it easy to keep the differential signal traces symmetrical.

Bias

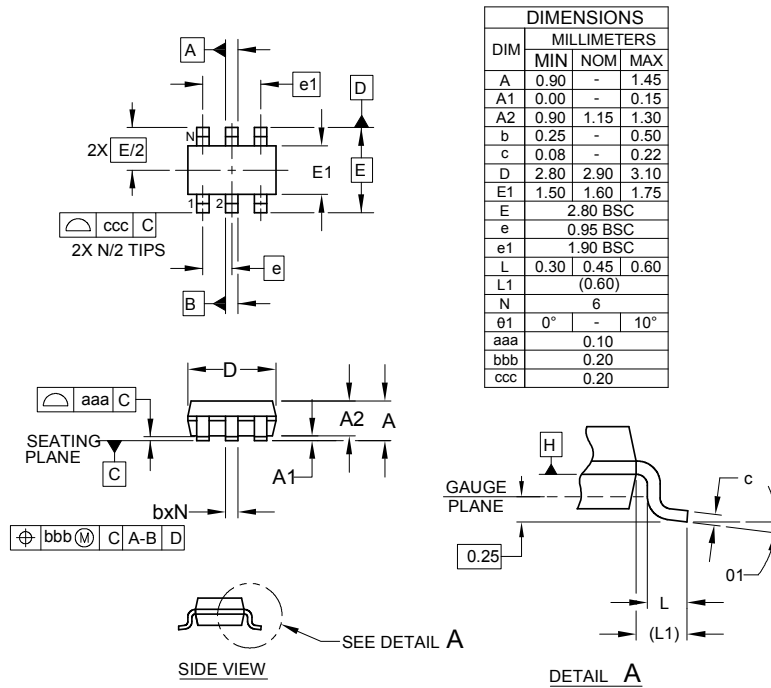

The device uses an internal bridge structure to effectively hide the capacitance of the TVS diode. However, in high voltage applications such as DSL, the initial signal will charge the capacitance of the TVS causing signal distortion and transmission errors. This distortion is only present until the TVS capacitance becomes charged and stabilizes. The solution is to pre-bias the TVS capacitance by connecting it to the external supply voltage (Figure 5). In the case of TClampxx82s, positive bias voltage should be connected at pin 5. For single ended applications, pin 2 is connected to ground (as shown in Figure 3). For dual voltage applications, pin 2 should be connected to negative polarity bias voltage. The bias resistors (R1, R2) should be large enough value as to minimize leakage current and minimize voltage drop over temperature (typically 100K Ohms to 1 Meg Ohm).

Surge and Power Induction Testing

DSL interfaces are wired telecom networks which are exposed to EOS from lightning surges and AC power line induction. DSL circuits are normally tested to the immunity requirements of ITU-T K.20, K.21, and K.44. TClampxx82S is designed to provide secondary protection to xDSL and G.Fast line drivers. They have been tested and passed the above requirements when used in conjunction with 220V gas discharge tubes (GDT). For more details, reference Semtech application note SI16-03 "Protecting G.Fast Circuits from Power Induction and Lightning Surges".

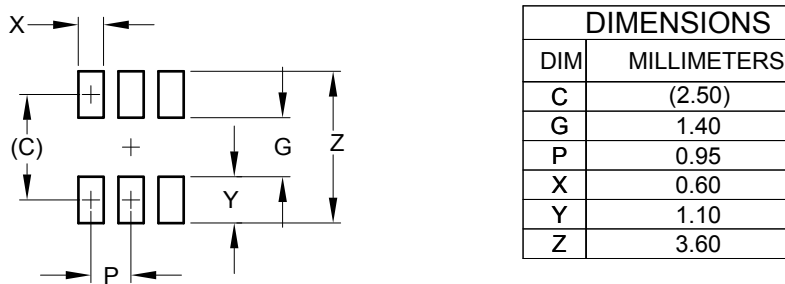

Outline Drawing - SOT-23 6L

NOTES:

1. CONTROLLING DIMENSIONS ARE IN MILLIMETERS (ANGLES IN DEGREES).
2. DATUMS **-A-** AND **-B-** TO BE DETERMINED AT DATUM PLANE **-H-**
3. DIMENSIONS "E1" AND "D" DO NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.

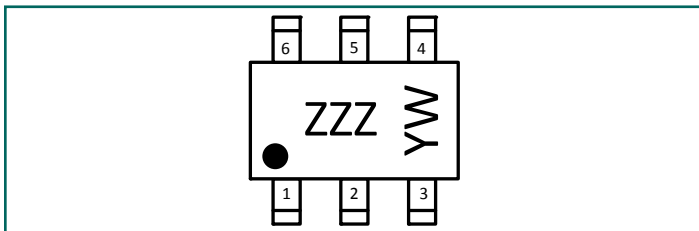

Land Pattern - SOT-23 6L
