## High Temperature Hex Half-bridge Driver with Serial Input Control

---

### DATASHEET

### Features

---

- Six half-bridge outputs formed by six high-side and six low-side drivers
- Capable of switching all kinds of loads (such as DC motors, bulbs, resistors, capacitors and inductors)
- $R_{DSon}$  typically  $1.0\Omega$  at  $25^{\circ}\text{C}$ , maximum  $2.2\Omega$  at  $200^{\circ}\text{C}$
- Up to 650-mA output current
- Very low quiescent current  $I_S < 20\mu\text{A}$  in Standby Mode
- Outputs short-circuit protected
- Overtemperature prewarning and protection
- Undervoltage protection
- Various diagnosis functions such as shorted output, open load, overtemperature and power supply fail
- Serial data interface
- Operation voltage up to 40V
- Daisy chaining possible
- Serial interface 5V compatible, up to 2MHz clock frequency
- QFN24 package

# 1. Description

The Atmel® ATA6837 is designed for high-temperature applications. In mechatronic solutions, for example, turbo charger or exhaust gas recirculation systems, many flaps have to be controlled by DC motor driver ICs which are located very close to the hot engine or actuator and where ambient temperatures up to 150°C are usual. Due to the advantages of SOI technology, junction temperatures up to 200°C are allowed. This enables new cost-effective board design possibilities to achieve complex mechatronic solutions.

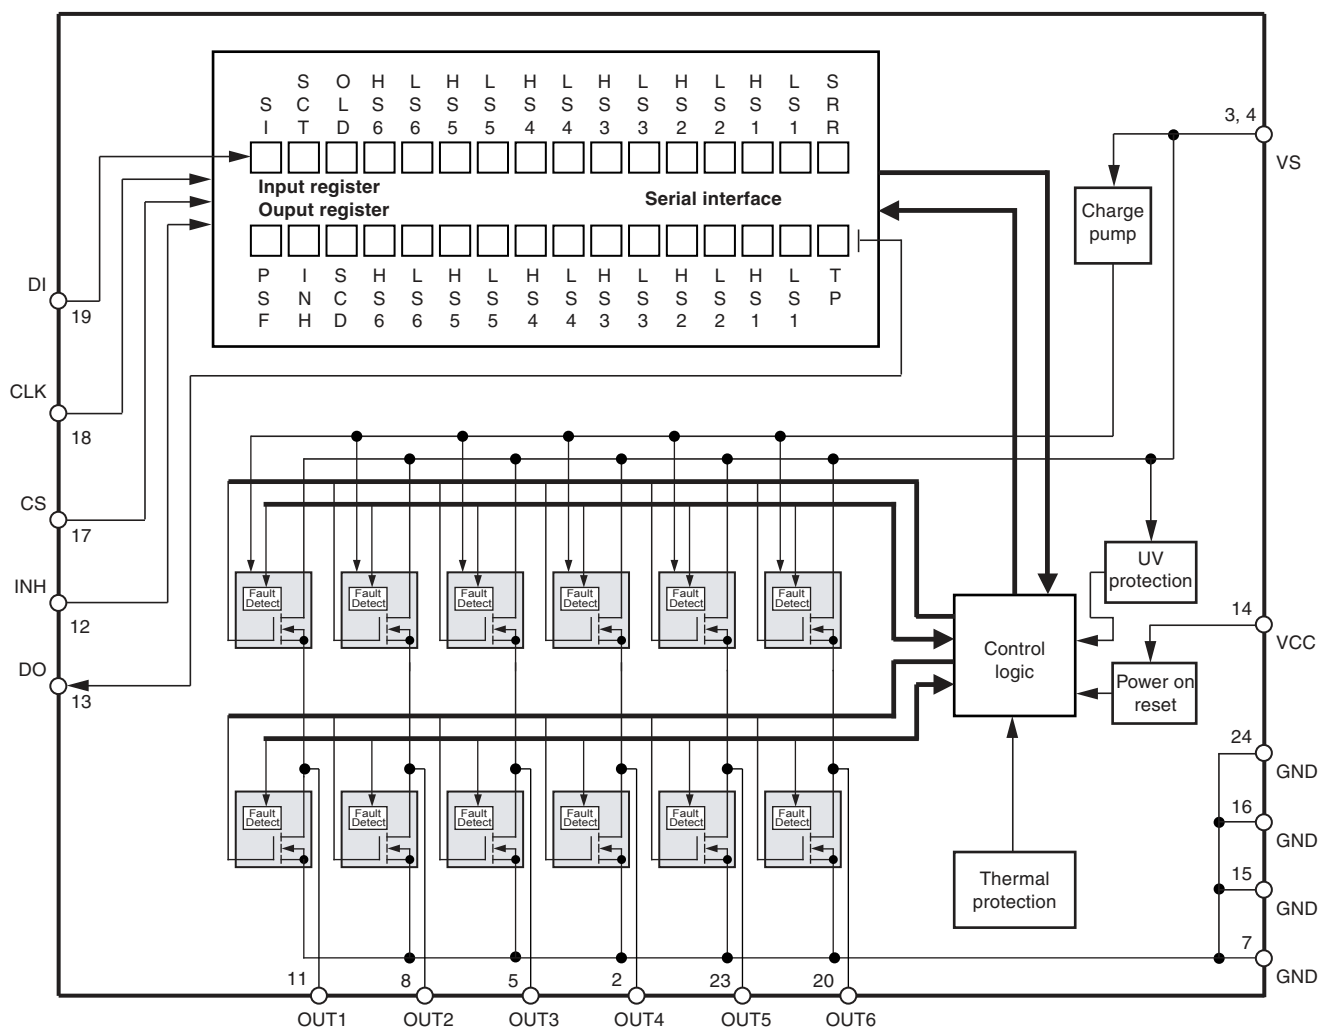

The Atmel ATA6837 is a fully protected hex half-bridge driver, used to control up to 6 different loads by a microcontroller in automotive and industrial applications.

Each of the six high-side and six low-side drivers is capable of driving currents up to 650mA. The drivers are internally connected to form 6 half-bridges and can be controlled separately from a standard serial data interface. Therefore, all kinds of loads, such as bulbs, resistors, capacitors and inductors, can be combined. The IC especially supports the application of H-bridges to drive DC motors.

Protection is guaranteed in terms of short-circuit conditions, overtemperature and undervoltage. Various diagnosis functions and a very low quiescent current in standby mode make a wide range of applications possible.

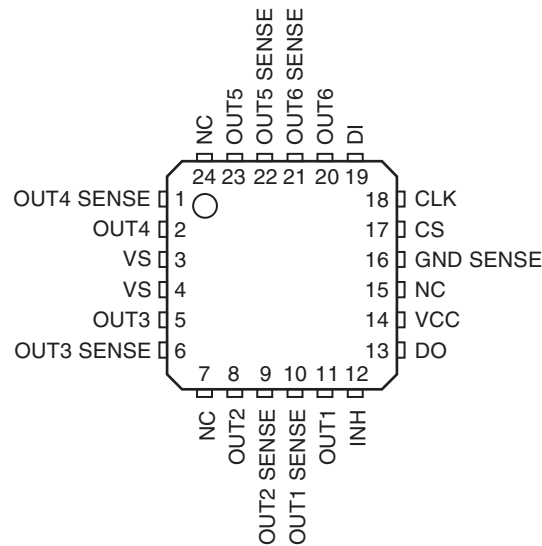

Automotive qualification referring to conducted interferences, EMC protection and ESD protection gives added value and enhanced quality for the exacting requirements of automotive applications.

## 2. Pin Configuration

Figure 2-1. Pinning QFN 24, 5 × 5, 0.65mm Pitch

Note: YWW Date code (Y = Year above 2000, WW = week number)  
 ATAxzy Product name  
 ZZZZZ Wafer lot number  
 AL Assembly sub-lot number

Table 2-1. Pin Description QFN24

Pin	Symbol	Function
1	OUT4 SENSE	Only for testability in final test
2	OUT4	Half-bridge output 4; formed by internally connected power MOS high-side switch 4 and low-side switch 4 with internal reverse diodes; short circuit protection; overtemperature protection; diagnosis for short and open load
3	VS	Power supply output stages HS4, HS5 and HS6
4	VS	Power supply output stages HS1, HS2 and HS3
5	OUT3	Output 3; see pin 1
6	OUT3 SENSE	Only for testability in final test
7	NC	Internal bond to GND
8	OUT2	Output 2; see pin 1
9	OUT2 SENSE	Only for testability in final test
10	OUT1 SENSE	Only for testability in final test
11	OUT1	Output 1; see pin 1
12	INH	Inhibit input; 5V logic input with internal pull down; low = standby, high = normal operation
13	DO	Serial data output; 5V CMOS logic level tri-state output for output (status) register data; sends 16-bit status information to the microcontroller (LSB is transferred first). Output will remain tri-stated unless device is selected by CS = low, therefore, several ICs can operate on one data output line only
14	VCC	Logic supply voltage (5V)
15	NC	Internal bond to GND
16	GND SENSE	Ground; reference potential; internal connection to the lead frame; cooling tab

**Table 2-1. Pin Description QFN24 (Continued)**

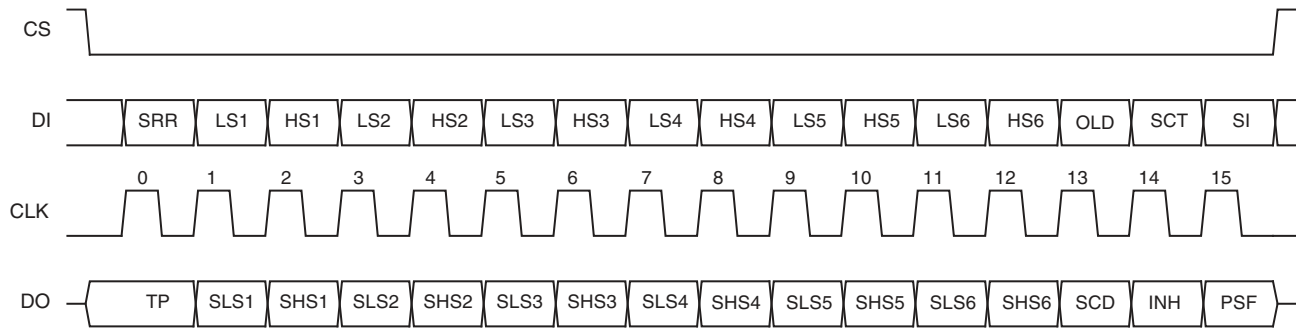

Pin	Symbol	Function
17	CS	Chip select input; 5V CMOS logic level input with internal pull up; low = serial communication is enabled, high = disabled
18	CLK	Serial clock input; 5V CMOS logic level input with internal pull down; controls serial data input interface and internal shift register ( $f_{\max} = 2\text{MHz}$ )
19	DI	Serial data input; 5V CMOS logic level input with internal pull down; receives serial data from the control device; DI expects a 16-bit control word with LSB being transferred first
20	OUT6	Output 6; see pin 1
21	OUT6 SENSE	Only for testability in final test
22	OUT5 SENSE	Only for testability in final test
23	OUT5	Output 5; see pin 1
24	NC	Internal bond to GND

## 3. Functional Description

### 3.1 Serial Interface

Data transfer starts with the falling edge of the CS signal. Data must appear at DI synchronized to CLK and is accepted on the falling edge of the CLK signal. LSB (bit 0, SRR) has to be transferred first. Execution of new input data is enabled on the rising edge of the CS signal. When CS is high, pin DO is in a tri-state condition. This output is enabled on the falling edge of CS. Output data will change their state with the rising edge of CLK and stay stable until the next rising edge of CLK appears. LSB (bit 0, TP) is transferred first.

**Figure 3-1. Data Transfer Input Data Protocol**

**Table 3-1. Input Data Protocol**

Bit	Input Register	Function
0	SRR	Status register reset (high = reset; the bits PSF, SCD and overtemperature shutdown in the output data register are set to low)
1	LS1	Controls output LS1 (high = switch output LS1 on)
2	HS1	Controls output HS1 (high = switch output HS1 on)
3	LS2	See LS1
4	HS2	See HS1
5	LS3	See LS1
6	HS3	See HS1
7	LS4	See LS1
8	HS4	See HS1
9	LS5	See LS1
10	HS5	See HS1
11	LS6	See LS1
12	HS6	See HS1
13	OLD	Open load detection (low = on)
14	SCT	Programmable time delay for short circuit (shutdown delay high/low = 12ms/1.5ms)
15	SI	Software inhibit; low = standby, high = normal operation (data transfer is not affected by standby function because the digital part is still powered)

**Table 3-2. Output Data Protocol**

Bit	Output (Status) Register	Function
0	TP	Temperature prewarning: high = warning (overtemperature shutdown see remark below)
1	Status LS1	Normal operation: high = output is on, low = output is off Open-load detection: high = open load, low = no open load (correct load condition is detected if the corresponding output is switched off)
2	Status HS1	Normal operation: high = output is on, low = output is off Open-load detection: high = open load, low = no open load (correct load condition is detected if the corresponding output is switched off)
3	Status LS2	Description see LS1
4	Status HS2	Description see HS1
5	Status LS3	Description see LS1
6	Status HS3	Description see HS1
7	Status LS4	Description see LS1
8	Status HS4	Description see HS1
9	Status LS5	Description see LS1
10	Status HS5	Description see HS1
11	Status LS6	Description see LS1
12	Status HS6	Description see HS1
13	SCD	Short circuit detected: set high, when at least one output is switched off by a short circuit condition
14	INH	Inhibit: this bit is controlled by software (bit SI in input register) and hardware inhibit (pin INH). High = standby, low = normal operation
15	PSF	Power supply fail: undervoltage at pin VS detected

Note: Bit 0 to 15 = high: overtemperature shutdown

**Table 3-3. Status of the Input Register After Power on Reset**

Bit 15 (SI)	Bit 14 (SCT)	Bit 13 (OLD)	Bit 12 (HS6)	Bit 11 (LS6)	Bit 10 (HS5)	Bit 9 (LS5)	Bit 8 (HS4)	Bit 7 (LS4)	Bit 6 (HS3)	Bit 5 (LS3)	Bit 4 (HS2)	Bit 3 (LS2)	Bit 2 (HS1)	Bit 1 (LS1)	Bit 0 (SRR)
H	H	H	L	L	L	L	L	L	L	L	L	L	L	L	L

## 3.2 Power-supply Fail

In case of undervoltage at pin VS, an internal timer is started. When during a permanent undervoltage the delay time ( $t_{dUV}$ ) is reached, the power supply fail bit (PSF) in the output register is set and all outputs are disabled. When normal voltage is present again, the outputs are enabled immediately. The PSF bit remains high until it is reset by the SRR bit in the input register.

## 3.3 Open-load Detection

If the open-load detection bit (OLD) is set to low, a pull-up current for each high-side switch and a pull-down current for each low-side switch is turned on (open-load detection current  $I_{HS1-6}$ ,  $I_{LS1-6}$ ). If  $V_{VS} - V_{HS1-6}$  or  $V_{LS1-6}$  is lower than the open-load detection threshold (open-load condition), the corresponding bit of the output in the output register is set to high. Switching on an output stage with OLD bit set to low disables the open load function for this output.

## 3.4 Overtemperature Protection

If the junction temperature exceeds the thermal prewarning threshold,  $T_{jPW}$  set, the temperature prewarning bit (TP) in the output register is set. When the temperature falls below the thermal prewarning threshold,  $T_{jPW}$  reset, the bit TP is reset. The TP bit can be read without transferring a complete 16-bit data word: with CS = high to low, the state of TP appears at pin DO. After the microcontroller has read this information, CS is set high and the data transfer is interrupted without affecting the state of the input and output registers.

If the junction temperature exceeds the thermal shutdown threshold,  $T_{j\text{switch off}}$ , the outputs are disabled and all bits in the output register are set high. The outputs can be enabled again when the temperature falls below the thermal shutdown threshold,  $T_{j\text{switch on}}$ , and when a high has been written to the SRR bit in the input register. Thermal prewarning and shutdown threshold have hysteresis.

## 3.5 Short-circuit Protection

The output currents are limited by a current regulator. Current limitation takes place when the overcurrent limitation and shutdown threshold ( $I_{HS1-6}$ ,  $I_{LS1-6}$ ) are reached. Simultaneously, an internal timer is started. The shorted output is disabled when during a permanent short the delay time ( $t_{dSd}$ ) programmed by the short-circuit timer bit (SCT) is reached. Additionally, the short-circuit detection bit (SCD) is set. If the temperature prewarning bit TP in the output register is set during a short, the shorted output is disabled after  $t_{dSd}$  and SCD bit is set. By writing a high to the SRR bit in the input register, the SCD bit is reset and the disabled outputs are enabled.

## 3.6 Inhibit

There are two ways to inhibit the Atmel® ATA6837:

- Set bit SI in the input register to 0
- Switch pin INH to 0V

In both cases, all output stages are turned off but the serial interface stays active. The output stages can be activated again by bit SI = 1 (when INH = VCC) or by pin INH switched back to VCC (when SI = 1).

## 4. Absolute Maximum Ratings

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

All values refer to GND pins.

Parameters	Pin	Symbol	Value	Unit
Supply voltage	3, 4	$V_{VS}$	-0.3 to +40	V
Supply voltage $t < 0.5s$ ; $I_S > -2A$	3, 4	$V_{VS}$	-1	V
Supply voltage difference $ V_{S\_pin3} - V_{S\_pin4} $	3, 4	$\Delta V_{VS}$	150	mV
Logic supply voltage	14	$V_{VCC}$	-0.3 to +7	V
Logic input voltage	17 - 19	$V_{DI}, V_{CLK}, V_{CS}$	-0.3 to $V_{VCC} + 0.3$	V
Logic output voltage	13	$V_{DO}$	-0.3 to $V_{VCC} + 0.3$	V
Input current	12, 17 - 19	$I_{INH}, I_{DI}, I_{CLK}, I_{CS}$	-10 to +10	mA
Output current	13	$I_{DO}$	-10 to +10	mA
Output current	2, 5, 8, 11, 20, 23	$I_{OUT1}$ to $I_{OUT6}$	Internally limited, see “Output Specification” in <a href="#">Section 7. on page 9</a>	
Junction temperature range		$T_j$	-40 to +200	°C
Storage temperature range		$T_{STG}$	-55 to +200	°C
Ambient temperature range		$T_a$	-40 to +150	°C

## 5. Thermal Resistance

Table 5-1. QFN24: Depends on the PCB-board

Parameter	Test Conditions	Pin	Symbol	Min.	Typ.	Max.	Unit
Junction pin		16	$R_{thJP}$			< 5	K/W
Junction ambient			$R_{thJA}$			35	K/W

## 6. Operating Range

Parameter	Test Conditions	Pin	Symbol	Min.	Typ.	Max.	Unit
Supply voltage		3, 4	$V_{VS}$	$V_{UV}^{(1)}$		40	V
Logic supply voltage		14	$V_{VCC}$	4.75		5.25	V
Logic input voltage		12, 17 - 19	$V_{INH}, V_{DI}, V_{CLK}, V_{CS}$	-0.3		$V_{VCC}$	V
Serial interface clock frequency			$f_{CLK}$			2	MHz
Junction temperature range			$T_j$	-40		+200	°C

CLK high time		18	5	t <sub>CLKh</sub>	225			ns
CLK low time		18	6	t <sub>CLKl</sub>	225			ns
CLK period time		18	-	t <sub>CLKp</sub>	500			ns
CLK setup time		18	7	t <sub>CLKsethl</sub>	225			ns
CLK setup time		18	3	t <sub>CLKsethh</sub>	225			ns
DI setup time		19	11	t <sub>Dlset</sub>	40			ns
DI hold time		19	12	t <sub>DlHold</sub>	40			ns

**Figure 8-1. Serial Interface Timing Diagram with Chart Numbers**

Inputs DI, CLK, CS: High level =  $0.7 \times V_{CC}$ , low level =  $0.2 \times V_{CC}$   
 Output DO: High level =  $0.8 \times V_{CC}$ , low level =  $0.2 \times V_{CC}$

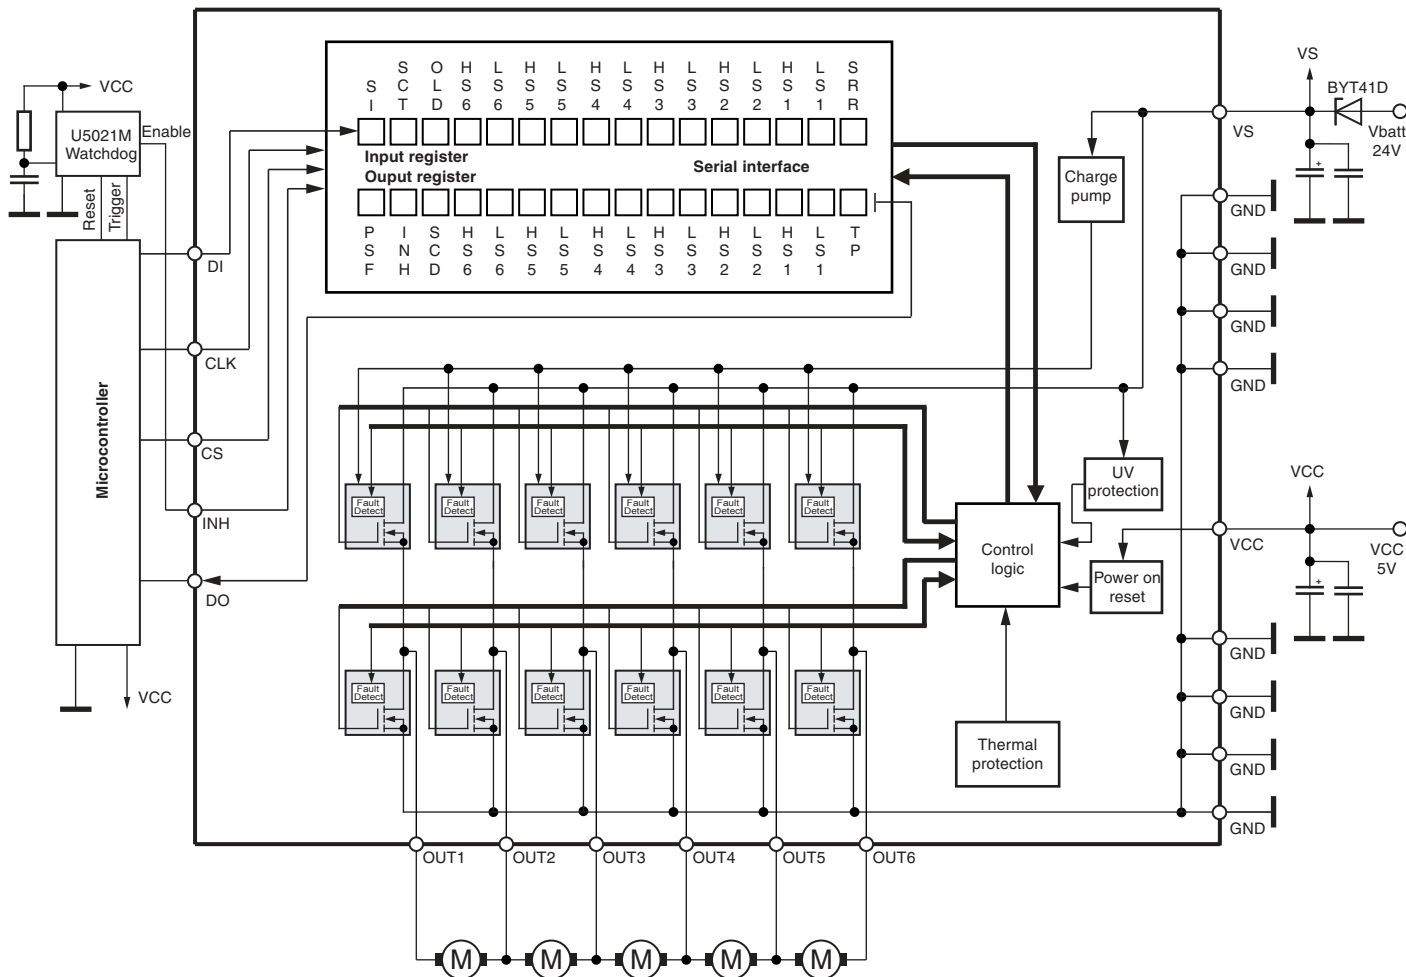

## 9. Noise and Surge Immunity

Parameters	Test Conditions	Value
Conducted interferences	ISO 7637-1	Level 4 <sup>(1)</sup>
Interference suppression	VDE 0879 Part 2	Level 5
ESD (Human Body Model)	ESD S 5.1	4kV
CDM (Charge Device Model)	ESD STM5.3	500V
MM (Machine Model)	ESD STM5.2	200V

Note: 1. Test pulse 5:  $V_{vbmax} = 40V$

## 10. Application Circuit

Figure 10-1. Application Circuit

### 10.1 Application Notes

- Connect the blocking capacitors at  $V_{CC}$  and  $V_S$  as close as possible to the power supply and GND pins.
- Recommended value for capacitors at  $V_S$ :  
Electrolytic capacitor  $C > 22\mu\text{F}$  in parallel with a ceramic capacitor  $C = 100\text{nF}$ . Value for electrolytic capacitor depends on external loads, conducted interferences and reverse-conducting current  $I_{HSX}$  (see [Section 4. "Absolute Maximum Ratings" on page 8](#)).
- Recommended value for capacitors at  $V_{CC}$ :  
Electrolytic capacitor  $C > 10\mu\text{F}$  in parallel with a ceramic capacitor  $C = 100\text{nF}$ .
- To reduce thermal resistance, place cooling areas on the PCB as close as possible to GND pins and to the die paddle in QFN24.
- The sense pins  $\text{OUT}_x \text{ SENSE}$  can either be left open or can be connected to the adjacent  $\text{OUT}_x$  pin. Never use the sense pins  $\text{OUT}_x \text{ SENSE}$  as power outputs.

## 11. Ordering Information

Extended Type Number	Package	Remarks
ATA6837-PXQW	QFN24	Taped and reeled, Pb-free

## 12. Package Information

Package: QFN 24 - 5 x 5  
 Exposed pad 3.6 x 3.6  
 (acc. JEDEC OUTLINE No. MO-220)

Dimensions in mm

Not indicated tolerances  $\pm 0.05$

Drawing-No.: 6.543-5122.01-4

Issue: 1; 15.11.05

## 13. Revision History

Please note that the following page numbers referred to in this section refer to the specific revision mentioned, not to this document.

Revision No.	History
4953H-AUTO-03/12	<ul style="list-style-type: none"><li>• Section 3.5 “Short-circuit Protection” on page 7 changed</li></ul>
4953G-AUTO-03/11	<ul style="list-style-type: none"><li>• Section 10.1 “Application Notes” on page 15 changed</li></ul>
4953F-AUTO-02/10	<ul style="list-style-type: none"><li>• Section 7 “Electrical Characteristics” numbers 5.10 and 5.11 on page 10 changed</li></ul>
4953E-AUTO-09/09	<ul style="list-style-type: none"><li>• Section 7 “Electrical Characteristics” number 1.7 on page 9 added</li></ul>
4953D-AUTO-10/08	<ul style="list-style-type: none"><li>• Features on page 1 changed</li><li>• Table 2-1 “Pin Description QFN24” on pages 3 to 4 changed</li><li>• Section 4 “Abs.Max.Ratings” on page 8 changed</li><li>• Section 5 “Thermal Resistance” on page 8 changed</li><li>• Section 6 “Operating Range” on page 8 changed</li><li>• Section 7 “Electrical Characteristics” numbers 1.1, 1.2, 1.6, 4.1 to 4.7, 5.3, 5.4 and 5.6 to 5.9 on pages 9 to 10 changed</li><li>• Section 8 “Serial Interface: Timing” on page 12 changed</li><li>• Section 9 “Noise and Surge Immunity” on page 16 changed</li><li>• Section 11 “Ordering Information” on page 14 changed</li></ul>
4953C-AUTO-09/07	<ul style="list-style-type: none"><li>• Section 7 “Electrical Characteristics” numbers 5.15 and 5.16 on page 10 changed</li><li>• Section 9 “Noise and Surge Immunity” on page 14 changed</li></ul>
4953B-AUTO-07/07	<ul style="list-style-type: none"><li>• Put datasheet in a new template</li><li>• Section 7 “Electrical Characteristics” numbers 1.5, 3.1, 5.15 and 8.2 on pages 9 to 11 changed</li></ul>
