

Low Power Triple and Quad Channels Digital Isolators

Check for Samples: [ISO7631FM](#), [ISO7631FC](#), [ISO7640FC](#), [ISO7641FC](#)

FEATURES

- Signaling Rate: 150 Mbps (M-Grade), 25 Mbps (C-Grade)
- Robust Design with Integrated Noise Filter (C-Grade)
- Low Power Consumption, Typical I_{CC} per Channel (3.3V Supplies):
 - ISO7631FM: 2 mA at 10 Mbps
 - ISO7631FC: 1.5 mA at 10 Mbps
 - ISO7640FC: 1.1 mA at 10 Mbps
 - ISO7641FC: 1.3 mA at 10 Mbps
- Extremely low $I_{CC_disable}$ (C-Grade)
- Low Propagation Delay: 7 ns Typical (M-Grade)
- Output Defaults to Low-state in Fail-safe Mode
- Wide Temperature Range: -40°C to 125°C
- 50 KV/ μs Transient Immunity, Typical
- Long Life with SiO_2 Isolation barrier
- Operates From 2.7V (M-Grade), 3.3 V and 5 V Supply and Logic Levels
- Wide Body SOIC-16 Package

APPLICATIONS

- Optocoupler Replacement in:
 - Industrial Fieldbus
 - Profibus
 - Modbus
 - DeviceNet™ Data Buses
 - Servo Control Interface
 - Motor Control
 - Power Supplies
 - Battery Packs

SAFETY AND REGULATORY APPROVALS

- 2500 V_{RMS} for 1 Minute per UL 1577 (approved)
- 4000 V_{PK} VDE Rating for DIN EN 60747-5-2 (VDE 0884 Rev. 2), 1414 V_{PK} Working Voltage (approved)
- CSA Component Acceptance Notice 5A (approved)

DESCRIPTION

ISO7631F, ISO7640F and ISO7641F provide galvanic isolation up to 4 KV_{PK} per VDE. ISO7631F has 3 channels with two forward and one reverse direction channels. ISO7640F and ISO7641F are quad channel isolators; ISO7640F has four forward and ISO7641F has three forward and one reverse direction channels. Suffix F indicates that output defaults to Low-state in fail-safe conditions (see [Table 1](#)). M-Grade devices are high speed isolators capable of 150 Mbps data rate with fast propagation delays whereas C-Grade devices can run up to 25 Mbps data rate with low power consumption and integrated filters for noise-prone applications. C-Grade devices are recommended for lower speed applications where input noise pulses of less than 6 ns duration need to be suppressed or lower power consumption is critical.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION CONTINUED

Each isolation channel has a logic input and output buffer separated by a silicon dioxide (SiO₂) insulation barrier. Used in conjunction with isolated power supplies, these devices prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. The devices have TTL input thresholds and can operate from 2.7 V (M-Grade), 3.3 V and 5 V supplies. All inputs are 5 V tolerant when supplied from 3.3 V or 2.7 V supplies.

PIN DESCRIPTIONS

NAME	PIN			I/O	DESCRIPTION
	ISO7640	ISO7641	ISO7631		
INA	3	3	3	I	Input, channel A
INB	4	4	4	I	Input, channel B

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

PARAMETER		VALUE		UNIT	
		MIN	MAX		
Supply voltage ⁽²⁾	V _{CC1} , V _{CC2}	-0.5	6	V	
Voltage	IN _x , OUT _x , EN _x	-0.5	6	V	
Output Current, I _O			±15	mA	
Electrostatic discharge	Human Body Model	ESDA, JEDEC JS-001-2012		±4	kV
	Field-Induced Charged Device Model	JEDEC JESD22-C101E		±1.5	kV
	Machine Model	JEDEC JESD22-A115-A		±200	V
Maximum junction temperature, T _J			150	°C	
Storage temperature, T _{STG}		-65	150	°C	

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.

RECOMMENDED OPERATING CONDITIONS

PARAMETER		MIN	TYP	MAX	UNIT
Supply voltage	V _{CC1} , V _{CC2}	M-Grade	2.7	5.5	V
		C-Grade	3	5.5	
High-level output current	I _{OH}	-4			mA
Low-level output current	I _{OL}			4	mA
High-level input voltage	V _{IH}	2		V _{CC}	V
Low-level input voltage	V _{IL}	0		0.8	V
Input pulse duration	t _{ui}	M-Grade: ≥3V-Operation	6.67		ns
		M-Grade: <3V-Operation	10		
		C-Grade: ≥3V-Operation	40		
Signaling rate	1 / t _{ui}	M-Grade: ≥3V-Operation	0	150	Mbps
		M-Grade: <3V-Operation	0	100	
		C-Grade: ≥3V-Operation	0	25	
Junction temperature	T _J	-40		136	°C
Ambient temperature	T _A	-40	25	125	°C

t_{fs}	Fail-safe output delay time from input data or power loss	See Figure 3		9.5			9	μ s	

(1) Also known as Pulse Skew.

 (2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

 (3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

 (4) The enable signal rate for C-grade devices should be \leq 45 Kbps.

PARAMETER MEASUREMENT INFORMATION

- A. The input pulse is supplied by a generator having the following characteristics: PRR ≤ 50 kHz, 50% duty cycle, $t_r \leq 3$ ns, $t_f \leq 3$ ns, $Z_O = 50 \Omega$. At the input, 50Ω resistor is required to terminate Input Generator signal. It is not needed in actual application.
- B. $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

DEVICE INFORMATION

IEC INSULATION AND SAFETY-RELATED SPECIFICATIONS FOR DW-16 PACKAGE

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance)	Shortest terminal to terminal distance through air	8.3			mm
L(I02) ⁽¹⁾	Minimum external tracking (Creepage)	Shortest terminal to terminal distance across the package surface	8.1			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	≥400			V
	Minimum Internal Gap (Internal Clearance)	Distance through the insulation	0.014			mm
R _{IO} ⁽²⁾	Isolation resistance, Input to Output	V _{IO} = 500 V, T _A < 100°C		>10 ¹²		Ω
		V _{IO} = 500 V, 100°C ≤ T _A ≤ max		>10 ¹¹		
C _{IO} ⁽²⁾	Barrier capacitance, Input to Output	V _I = 0.4 sin (2πft), f = 1MHz		2		pF
C _I ⁽³⁾	Input capacitance	V _I = V _{CC} /2 + 0.4 sin (2πft), f = 1MHz, V _{CC} = 5 V		2		pF

- (1) Per JEDEC package dimensions.
 (2) All pins on each side of the barrier tied together creating a two-terminal device.
 (3) Measured from input pin to ground.

NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

**Table 2. DIN EN 60747-5-2 (VDE 0884 TEIL 2) INSULATION CHARACTERISTICS⁽¹⁾
over recommended operating conditions (unless otherwise noted)**

Installation classification	Rated mains voltage $\leq 300 V_{RMS}$	I–IV
	Rated mains voltage $\leq 600 V_{RMS}$	I–III
	Rated mains voltage $\leq 1000 V_{RMS}$	I–II

REGULATORY INFORMATION

VDE	CSA	UL
Certified according to DIN EN 60747-5-2	Approved under CSA Component Acceptance Notice #5A	Recognized under 1577 Component Recognition Program
Basic Insulation Maximum Transient Overvoltage, 4000 V_{PK} Maximum Working Voltage, 1414 V_{PK}	4000 V_{PK} Insulation	Single Protection, 2500 V_{RMS} ⁽¹⁾
File Number: 40016131	File Number: 220991	File Number: E181974

(1) Production tested $\geq 3000 V_{RMS}$ for 1 second in accordance with UL 1577.

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S Safety input, output, or supply current	DW-16 $\theta_{JA} = 72 \text{ }^\circ\text{C/W}$, $V_I = 5.5\text{V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$			316	mA
				482	
				643	
T_S Maximum case temperature				150	$^\circ\text{C}$

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the *Thermal Information* table is that of a device installed on a High-K Test Board for Leaded Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

Figure 5. DW-16 θ_{JC} Thermal Derating Curve per IEC 60747-5-2

APPLICATION INFORMATION

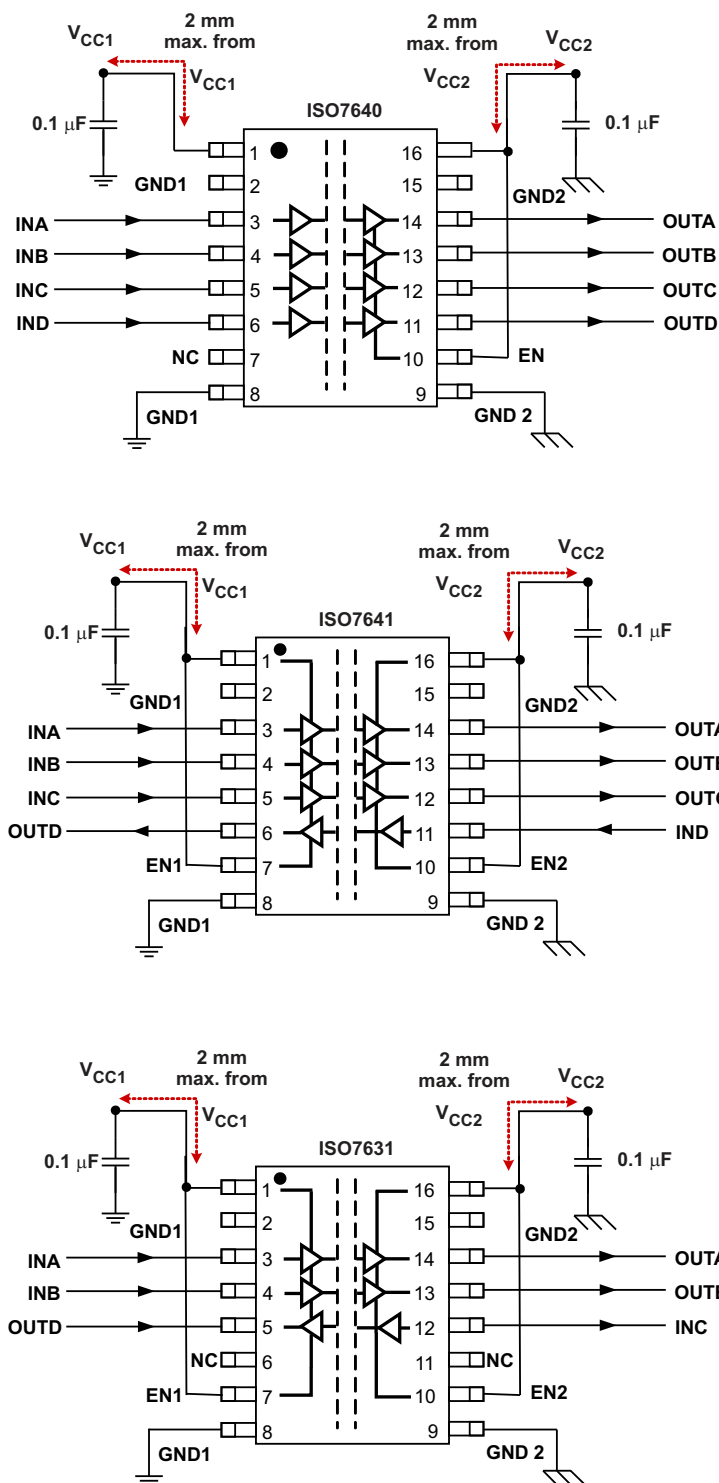

Figure 6. Typical ISO7640, ISO7641 and ISO7631 Application Circuit

Note: For detailed layout recommendations, see Application Note [SLLA284](#), *Digital Isolator Design Guide*.

TYPICAL SUPPLY CURRENT EQUATIONS

(Calculated based on room temperature and typical Silicon process)

ISO7631FM:

At $V_{CC1} = V_{CC2} = 3.3V$
 $I_{CC1} = 1.8072 + 0.0244 \times f + 0.0016 \times f \times C_L$
 $I_{CC2} = 2.4625 + 0.0252 \times f + 0.0033 \times f \times C_L$
 At $V_{CC1} = V_{CC2} = 5V$
 $I_{CC1} = 2.3183 + 0.04 \times f + 0.0025 \times f \times C_L$
 $I_{CC2} = 3.2582 + 0.0403 \times f + 0.0049 \times f \times C_L$

ISO7631FC:

At $V_{CC1} = V_{CC2} = 3.3V$
 $I_{CC1} = 1.1762 + 0.0325 \times f + 0.0017 \times f \times C_L$
 $I_{CC2} = 1.5285 + 0.0299 \times f + 0.0033 \times f \times C_L$
 At $V_{CC1} = V_{CC2} = 5V$
 $I_{CC1} = 1.6001 + 0.0528 \times f + 0.0025 \times f \times C_L$
 $I_{CC2} = 2.2032 + 0.0475 \times f + 0.005 \times f \times C_L$

ISO7640FC:

At $V_{CC1} = V_{CC2} = 3.3V$
 $I_{CC1} = 0.3209 + 0.0488 \times f$
 $I_{CC2} = 1.9699 + 0.0385 \times f + 0.0066 \times f \times C_L$
 At $V_{CC1} = V_{CC2} = 5V$
 $I_{CC1} = 0.5038 + 0.0812 \times f$
 $I_{CC2} = 2.6117 + 0.0603 \times f + 0.0101 \times f \times C_L$

ISO7641FC:

At $V_{CC1} = V_{CC2} = 3.3V$
 $I_{CC1} = 1.2162 + 0.0462 \times f + 0.0017 \times f \times C_L$
 $I_{CC2} = 1.8054 + 0.0411 \times f + 0.005 \times f \times C_L$
 At $V_{CC1} = V_{CC2} = 5V$
 $I_{CC1} = 1.6583 + 0.0757 \times f + 0.0025 \times f \times C_L$
 $I_{CC2} = 2.5008 + 0.0655 \times f + 0.0076 \times f \times C_L$

I_{CC1} and I_{CC2} are typical supply currents measured in mA; f is data rate measured in Mbps; C_L is the capacitive load on each channel measured in pF.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
ISO7631FCDWR	SOIC	DW	16	2000	367.0	367.0	38.0
ISO7631FMDWR	SOIC	DW	16	2000	367.0	367.0	38.0
ISO7641FCDWR	SOIC	DW	16	2000	533.4	186.0	36.0

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
 - D. Falls within JEDEC MS-013 variation AA.

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Refer to IPC7351 for alternate board design.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
