

USB Audio Decoder LSI Series

**AAC/WMA/MP3**

**+SD Memory Card + iPod**

**BU9450xAxxx Series**

●Description

BU9450xAxxx series are WAV/AAC/WMA/MP3 decoder LSI which contains USB host, SD card I/F, audio DAC, system controller, regulator for internal CORE power supply.

●Features

- USB2.0 Full Speed host I/F function contained.
- SD card I/F function contained.
- I<sup>2</sup>C format I/F function contained.
- Protocol conversion from I<sup>2</sup>C to USB HID or from USB HID to I<sup>2</sup>C.  
(BU94502AMUV and BU94502ASK2 only)
- MP3 decode function contained. (Available for MPEG1, 2 and 2.5, Layer 1, 2 and 3)
- WMA decode function contained. (Available for WMA9 standard and not available for DRM)
- AAC decode function contained. (available for MPEG4 AAC-LC and not available for DRM)
- WAV format file playing function contained.
- Sample Rate Converter contained.
- System Controller contained.
- FAT analysis function contained.
- Browsing function of File Names, Folder Names on music playing contained.
- ID3TAG and WMATAG and AACTAG Analysis.
- Fast forward playing and fast backward playing function contained.
- Resume function contained.
- Reading a specified file data is possible from connected memory.
- LUN is selectable.
- Sound Effect function contained.
- Digital Audio Out function contained.  
(I<sup>2</sup>S, EIAJ, S/PDIF)
- Audio DAC contained.
- Regulator for internal CORE power supply contained.

●Package W(Typ.) x D(Typ.) x H(Max.)

●Applications

Audio products, etc

●Line up

Part number	iPod	Package		Ordering part number
BU94501AMUV	Not supported	VQFN040V6060	Reel of 2000	BU94501AMUV-E2
BU94501AKS2		SQFP-T52M	Tray of 1000	BU94501AKS2
BU94502AMUV	Supported	VQFN040V6060	Reel of 2000	BU94502AMUV-E2
BU94502AKS2		SQFP-T52M	Tray of 1000	BU94502AKS2

○Product structure : Silicon Monolithic integrated circuit ○Radiation resistance design is not arranged

Figure 5. Arrangement of Terminals (BU9450xAKS2)

## ●Description of Terminals -part1

BU94501AMUV / BU94502AMUV

No	Pin Name	IO Cir	IO	PU	Function
1	DVSSIO	—	—	—	GND terminal
2	RESETX	A	I	PU*3	H: Release RESET, L: RESET
3	TMODE	H	I	—	Test mode terminal. Connect it to GND.
4	IRPTO	B	O	—	Connection interrupt output terminal
5	SEARC	B	O	—	Search flag output terminal
6	MCHNG	B	O	—	File play end flag output terminal
7	BUSY	B	O	—	Command analysis BUSY output terminal
8	SCL	I	I	*2	I <sup>2</sup> C slave clock input terminal
9	SDA	I	I/O	*2	I <sup>2</sup> C slave data I/O terminal
10	DVDD_M	—	—	—	CORE power (VDD2) monitor terminal. Connect it to bypass capacitor.
11	DVSSIO	—	—	—	GND terminal
12	DVDDIO	—	—	—	IO power (VDD1) terminal
13	TEST1	—	I	—	Test mode terminal. Connect it to GND.
14	XIN_PLL	E	I	—	X'tal (16.9344MHz) connection input terminal.
15	XOUT_PLL	E	O	—	X'tal (16.9344MHz) connection output terminal.
16	TEST2	H	I	PU	Pull it up at VDD1 power.
17	TEST3	H	I	PU	Pull it up at VDD1 power.
18	TEST4	H	I	PU *1*3	Test mode terminal. Connect it to GND.
19	AVDDC	—	—	—	USB Power supply (VDD1) terminal
20	AVSSC	—	—	—	USB GND terminal
21	USB_DM	C	I/O	—	USB D−I/O terminal
22	USB_DP	C	I/O	—	USB D+ I/O terminal
23	REXTI	D	O	—	USB bias resistor (12kΩ) connecting terminal Arrange the resistance of 12kΩ near PIN, and wiring on the PIN side doesn't cross with other signal lines.
24	CLK24MI	B	I/O	PU*3	24MHz clock input terminal at SRC through mode
25	LRCK/SPDIF	B	O	—	Digital Audio channel clock or SPDIF output terminal
26	BCK	B	O	—	Digital Audio bit clock output terminal
27	DATA	B	O	—	Digital Audio data output terminal
28	MCLK	B	O	—	Audio Master clock (12.288MHz/16.9344MHz) output terminal
29	DVDDIO	—	—	—	IO Power supply (VDD1) terminal
30	AMUTE	G	O	—	Audio Mute output terminal (H : MUTE OFF, L : MUTE ON)
31	DAVSS	—	—	—	Audio DAC GND terminal
32	RDACO	F	O	—	Audio DAC Rch Line output terminal
33	VCDACO	J	O	—	Audio DAC Reference voltage output terminal
34	LDACO	F	O	—	Audio DAC Lch Line output terminal
35	DAVDD	B	—	—	Audio DAC Power supply (VDD1) terminal
36	SD_CON	B	I	PU*3	SD card Connect terminal
37	SD_DO	B	I	—	SD card Data In terminal
38	SD_CLK	B	O	—	SD card Clock terminal
39	SD_DI	B	O	—	SD card Data Out terminal
40	SD_CS	B	O	—	SD card Chip select terminal

\*1 Pull-Up turns OFF when L is input.

\*2 An external pull-up resistor is required because of Open Drain IO

\*3 please input L level directly without resistance when you input L to the terminal with Pull-Up (about 33 kΩ)

## ●Description of Terminals -part2

BU94501AKS2 / BU94502AKS2

No	Pin Name	IO Cir	IO	PU	Function
1	DVSSIO	—	—	—	GND terminal
2	DVDDIO	—	—	—	IO power (VDD1) terminal
3	TEST1	—	I	—	Test mode terminal. Connect it to GND.
4	XIN_PLL	E	I	—	X'tal (16.9344MHz) connection input terminal.
5	XOUT_PLL	E	O	—	X'tal (16.9344MHz) connection output terminal.
6	N.C.	—	—	—	Non Connection
7	N.C.	—	—	—	Non Connection
8	TEST2	H	I	PU	Pull it up at VDD1 power.
9	TEST3	H	I	PU	Pull it up at VDD1 power.
10	TEST4	H	I	PU *1*3	Test mode terminal. Connect it to GND.
11	AVDDC	—	—	—	USB Power supply (VDD1) terminal
12	AVSSC	—	—	—	USB GND terminal
13	N.C.	—	—	—	Non Connection
14	USB_DM	C	I/O	—	USB D− I/O terminal
15	USB_DP	C	I/O	—	USB D+ I/O terminal
16	REXTI	D	O	—	USB bias resistor (12kΩ) connecting terminal Arrange the resistance of 12kΩ near PIN, and wiring on the PIN side doesn't to cross with other signal lines.
17	CLK24MI	B	I	PU*3	24MHz clock input terminal at SRC through mode
18	LRCK/SPDIF	B	O	—	Digital Audio channel clock or SPDIF output terminal
19	N.C.	—	—	—	Non Connection
20	BCK	B	O	—	Digital Audio bit clock output terminal
21	DATA	B	O	—	Digital Audio data output terminal
22	MCLK	B	O	—	Audio Master clock (12.288MHz/16.9344MHz) output terminal
23	N.C.	—	—	—	Non Connection
24	N.C.	—	—	—	Non Connection
25	DVDDIO	—	—	—	IO Power supply (VDD1) terminal
26	AMUTE	G	O	—	Audio Mute output terminal (H : MUTE OFF, L : MUTE ON)
27	DAVSS	—	—	—	Audio DAC GND terminal
28	RDACO	F	O	—	Audio DAC Rch Line output terminal
29	VCDACO	J	O	—	Audio DAC Reference voltage output terminal
30	LDACO	F	O	—	Audio DAC Lch Line output terminal
31	DAVDD	B	—	—	Audio DAC Power supply (VDD1) terminal
32	N.C.	—	—	—	Non Connection
33	N.C.	—	—	—	Non Connection
34	SD_CON	B	I	PU*3	SD card Connect terminal
35	SD_DO	B	I	—	SD card Data In terminal
36	SD_CLK	B	O	—	SD card Clock terminal
37	SD_DI	B	O	—	SD card Data Out terminal
38	SD_CS	B	O	—	SD card Chip select terminal
39	N.C.	—	—	—	Non Connection
40	DVSSIO	—	—	—	GND terminal
41	N.C.	—	—	—	Non Connection
42	N.C.	—	—	—	Non Connection
43	RESETX	A	I	PU*3	H: Release RESET, L: RESET
44	TMODE	H	I	—	Test mode terminal. Connect it to GND.
45	IRPTO	B	O	—	Connection interrupt output terminal
46	N.C.	—	—	—	Non Connection
47	SEARCH	B	O	—	Search flag output terminal
48	MCHNG	B	O	—	File play end flag output terminal
49	BUSY	B	O	—	Command analysis BUSY output terminal
50	SCL	I	I	*2	I <sup>2</sup> C slave clock input terminal
51	SDA	I	I/O	*2	I <sup>2</sup> C slave data I/O terminal
52	DVDD_M	—	—	—	CORE power (VDD2) monitor terminal Connect it to bypass capacitor.

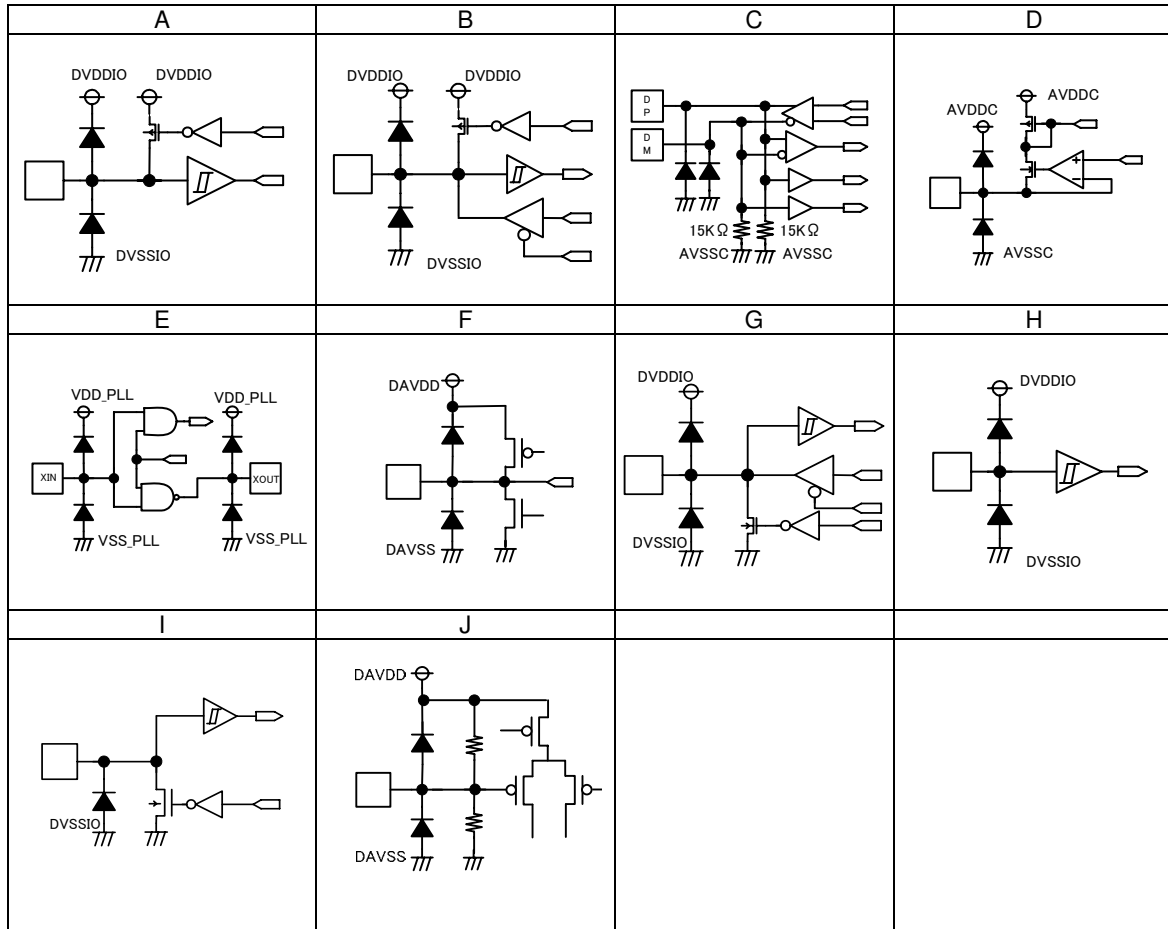

\*1 Pull-Up turns OFF when L is input.

\*2 An external pull-up resistor is required because of Open Drain IO

\*3 please input L level directly without resistance when you input L to the terminal with Pull-Up (about 33 kΩ)

● Terminal equivalent circuit diagram

## ●Description of each block's movement -part1

### 1. USB host interface

- Builds in the USB Full speed (12Mbps) HOST control function.
  - Supports the USB mass storage class.
  - Supports changeover of LUN (Logical Unit Number) and possible that Test Unit Ready of other LUN is confirmed during the playback.
  - Converts the protocol from I<sup>2</sup>C to USB (HID) or vice versa during communications with the master microcomputer.\*
  - Builds in isochronous transmission functions up to 192byte/Frame. \*
  - Builds in the interrupt IN transfer function. \*
  - Doesn't support external HUB.
  - Doesn't support MTP.
- \*These functions are available for a device having two or more configurations.

### 2. SD card interface

- Supports the SPI mode.
- Supports SDHC memory cards.
- Supports MMC, mini-SD and micro-SD cards.
- Does not support CPRM.

### 3. I<sup>2</sup>C command interface (Slave I/F)

- Communicates with the master microcomputer using the I<sup>2</sup>C interface format.
- Operates as I<sup>2</sup>C slave I/F.
- Supports the standard mode (100kbps) and the fast mode (400kbps).
- Supports 7-bit addresses.

### 4. Audio output

- Supports audio line outputs from built-in 1bit-DAC.
  - Builds in the digital soft mute function. \*
  - Supports digital audio outputs of the I<sup>2</sup>S format, the EIAJ format and those and the digital audio interface (SPDIF).
  - Builds in sound effects including POPS, JAZZ, ROCK, CLASSIC, R&B and Bass Boost. \*
- \*This is available for audio line outputs only.

### 5. Sample rate converter

- Converts all support sample rates to 44.1 kHz based on the polyphase calculation.
- Selection of sample rate converter ON / OFF is possible by the command configuration.
- \* Supports only digital audio outputs of the I<sup>2</sup>S and EIAJ format and
- When sample rate converter is used in off, enter the clock of 24.576 MHz synchronizing with the clock of 16.9344 MHz ( enter XIN\_PLL terminal ) to the CLK24MI terminal.

### 6. System controller

- Control all operations including interface control to the master microcomputer, USB device access, SD card access, FAT analysis, sort function, decoding, encoding and audio output.

## ●Description of each block's movement -part2

### 7. FAT analysis

- Supports FAT32, FAT16 and FAT12 file system.
- Supports VFAT (long file name).
- Supports multi-partition up to 1 partition.
- Supports multi-drive up to 1 drive.
- Supports playable folder hierarchies up to 16 hierarchies whose full path including the file name is within 260 characters.
- Supports playable file extension of \*.wav for WAV files.
- Supports playable file extensions of \*.m4a, \*.3gp and \*.mp4 for AAC files.
- Supports playable file extensions of \*.asf and \*.wma for WMA files.
- Supports playable file extensions of \*.mp3, \*.mp2 and \*.mp1 for MP3 files. For \*.mp2 and \*.mp1, the function allows you to select whether to play. Does not distinguish between upper case letters and lower case letters of file extensions.
- Up to 256 folders and 256 files can be sorted and played in the order of UNICODE when sorting functional effective.
- Can obtain 5 file names ahead from current music file.
- Can obtain a folder name or file name within 128 bytes.
- Supports 512, 1024, 2048 and 4096 bytes per sector.
- Playable file size up to 2G-1 byte. A file over 2Gbyte is recognized as a playable file, too. But, it is for 2Gbyte -1byte that it can play.
- Supports the device size up to FAT specification (2T byte).

### 8. Control from master microcomputer (little endian order)

- Can control from the master microcomputer using the I<sup>2</sup>C interface.
- Controllable using commands of play, pause, stop, tune skip, tune forward, folder move, device change, volume setting, repeat change, random play, digital audio output setting, sound effect setting and direct tune selection and etc.
- Can read information on internal status during play or stop, folder number, file number within the folder, play time, total number of folders, total number of files, name of folder being played, name of file being played and TAG (title, artist, album, genre), and etc.

### 9. MP3 decoder

- Supports MPEG audio 1, 2 and 2.5.
- Supports Layer1, 2 and 3.
- Supports sample rate of 8 k, 16 k, 32 k, 11.025 k, 22.05 k, 44.1 k, 12 k, 24 k and 48 kHz.
- Supports bit rate of 8 to 320 kbps and VBR (Variable Bit Rate). \*Excluding the free format
- Supports ID3TAG V1.0, V1, 1, V2.2, V2.3 and V2.4.  
(Up to 128 bytes can obtain for album, artist, title and genre, respectively.)

### 10. WMA decoder

- Supports Windows Media Audio 9 standard.
- Not supports DRM files.
- Supports sample rate of 8 k, 16 k, 32 k, 11.025 k, 22.05 k, 44.1 k and 48 kHz.
- Supports bit rate of 5 to 384 kbps and VBR (Variable Bit Rate).
- Supports WMA-TAG.  
(Up to 128 bytes can obtain for album, artist, title and genre, respectively.)

### 11. AAC decoder

- Supports MPEG4 AAC-LC (Audio stream).
- Based on 3GPP TS 26.244 and iTunes.
- Supports File Type of m4a, mp4 and 3gpX. (X stands for any numeric value.)
- Not supports DRM files.
- Supports sample rate of 8 k, 16 k, 32 k, 11.025 k, 22.05 k, 44.1 k, 12 k, 24 k and 48 kHz.
- Supports bit rate of 8 to 320kbps and VBR (Variable Bit Rate).
- Supports AACTAG (iTunes Meta-data and 3GP Meta-data).  
(Up to 128 bytes can obtain for album, artist, title and genre, respectively.)  
\*For files other than those encoded by iTunes, sound interruption may occur when skipping or forwarding to the next tune if streams such as gaps and video data are contained in the file.

### 12. WAV play

- Supports WAV format.
- Supports sample rate of 8 k, 16 k, 32 k, 11.025 k, 22.05 k, 44.1 k, 12 k, 24 k and 48 kHz.

- Supports 16-bit PCM data.
- Supports RIFF TAG.  
(Up to 128 bytes can obtain for album, artist, title and genre, respectively.)

### 13. Browsing and direct tune selection

- Can analyzes and read other file name in memory while playing the current music.
- Up to 64 bytes can obtain for file name, folder name respectively.
- Supports direct music selection using the analysis data.

### 14. Repeat and random play

- Supports repeat within the memory, repeat within folder and repeat with single tune.
- Supports random play within the area of  $\pm 128$  files.
- Can select auto-play of next music or stop playing at the end of current music playing.

### 15. Read from files within memory

- Can read the data from specified file stored in the specified folder within the memory.

● Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit	Comment
Supply voltage(Analog, I/O)	VDD1MAX	-0.3 to 4.5	V	DVDDIO, DAVDD, AVDDC
Input voltage	VIN	-0.3 to VDD1 + 0.3	V	
Storage temperature range	TSTG	-55 to 125	°C	
Operating temperature range	TOPR	-40 to 85	°C

\*8 28, 30 pin output no-load

●Application Information

1. Clock and Reset

Clock

Clock name	I/O	Function	Remarks
XIN_PLL	I	X'tal (16.9344MHz) connection input terminal	-
XOUT_PLL	O	X'tal (16.9344MHz) connection terminal	-

Reset

Signal name	I/O	Function	Remarks
RESETX	I	System reset input terminal	-

Please release the reset signal continue L input for more than 100 us after clock input from the oscillation I/O terminal becomes stable. (See Figure 6.)

Figure 6. Reset Timing

Item	Code	Rating			Unit	Remarks
		min	typ	max		
Clock frequency	f <sub>CLK</sub>	16.9302	16.9344	16.9386	MHz	-
Reset L interval	t <sub>RSTX</sub>	100	-	-	us	-

2. USB I/F

USB I/O interface

Signal name	I/O	Function	Remarks
USB_DP	I/O	USB D+ I/O terminal	-
USB_DM	I/O	USB D- I/O terminal	-
REXTI	O	USB bias resistor connection terminal	Connect a resistor of 12 kΩ±1% to GND.

This interface communicates with the USB device using USB\_DP and USB\_DM differential signals. REXTI terminal is used to connect to the bias resistor in the USB-PHY block.

3. SD I/F

SD memory card SPI interface

Signal name	I/O	Function	Remarks
SD_CS	O	SD chip select	-
SD_CLK	O	SPI clock	-
SD_DI	O	SPI data input	-
SD_DO	I	SPI data output	-
SD_CON	I	SD card connect detection terminal	H: Do not detect SD card connect, L: Detect SD card connect

This interface connects to the SD memory card slot to communicate with the SD memory device.

Supports the SPI mode.

Supports SD, SDHC memory cards and MMC, mini-SD and micro-SD cards.

Does not supports CPRM.

Since the SD memory card slot needs to detect the insertion status of the SD memory device, be sure to use the slot having the SD memory card insertion status detection terminal. The SD\_CON terminal is pulled up within the device and detects "SD card connect" when L is input.

The SD\_CON terminal is pulled up within the device and detects "SD card connect" when L is input.

3.1 Timing

(Unless specified, Ta=25°C, VDD1=3.3V, Load=20pF, 10kΩ)

Item	Symbol	Rating			Unit	Remarks
		min	typ	max		
SD_CS Setup time	Tcss	-	5	-	us	
SD_CS Hold time	Tcsh	-	15	-	us	
SD_CLK Clock Frequency	Tclk	-	13.5	-	MHz	
SD_DI Output delay	Tod	-20	-	20	ns

Output Low Voltage	Vol	-	-	0.25*VDD1	V	

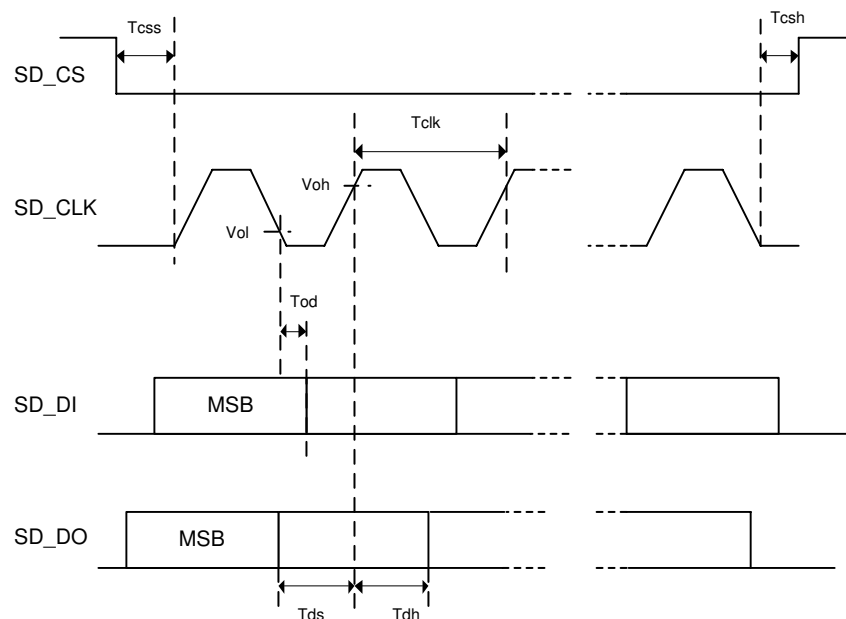

Figure 7. SPI I/F Timing

4. Audio line output

Audio line output

Signal name	I/O	Function	Remarks
LDACO	O	Lch audio line output	-
RDACO	O	Rch audio line output	-

This is a line output of decoded music data.

When a sample rate converter is used in on, data on the sample rate 48kHz, 32kHz are changed into 44.1kHz and outputted.

It turns ON when line output is selected by a command.

Figure 8. shows the relationship between audio outputs and volume steps.

The initial value is -24.1dB at power ON.

Figure 8. Volume Step Function

5. Equalizers

Selectable audio line output from 5 types of equalizers and 2 types of bus boosts, using commands. You can use a combination of an equalizer and bus boost 1. Even when line output is not selected, the equalizer setting is valid. However, for digital output, the equalizer cannot change the sound quality. Figure 9. - Figure 14. show frequency characteristics of each filter. Clipping may occur by the combination of volume and equalizer setting.

Figure 9. POPS Frequency Characteristics

Figure 10. JAZZ Frequency Characteristics

Figure 11. ROCK Frequency Characteristics

Figure 12. CLASSIC Frequency Characteristics

Figure 13. R&B

Figure 14. Bass Boost

6. MUTE control output

Audio MUTE

Signal name	I/O	Function	Remarks
AMUTE	O	Audio mute control terminal	H: At audio output , L: At mute

It outputs H at audio output and L at mute.

When power is ON or in the silence mode such as FF or FB, This control terminal is used to mute audio output It can be used for the flag to do mute with the amplifier of the rear step and so on.

Figure 15. shows the operation waveforms.

Figure 15. Waveform at Audio Mute

7. Digital audio output (I<sup>2</sup>S, EIAJ)

Audio outputs are shown in Table 1. "Audio Output".

Because TEST terminal is an output terminal, use it as OPEN.

Table 1. Audio Output

PIN	ANALOG output mode	DIGITAL output mode	
		SPDIF OFF	SPDIF ON
RDACO	Line Out Rch	HiZ	HiZ
LDACO	Line Out Lch	HiZ	HiZ
LRCK	TEST terminal	LR CLOCK	SPDIF
BCK	TEST terminal	BIT CLOCK	TEST terminal
DATA	TEST terminal	LR DATA	TEST terminal
MCLK	TEST terminal	MASTER CLOCK	TEST terminal

Digital audio interface (I<sup>2</sup>S, EIAJ)

Signal name	I/O	Function	Remarks
LRCK	O	LR clock output (fs=44.1kHz)	-
BCK	O	Bit clock output	-
DATA	O	Data output	-
MCLK	O	Masterclock output	At fs=32kHz 12.288MHz (384fs) At fs=44.1kHz 16.9344MHz (384fs) At fs=48kHz 12.288MHz (256fs)

This is a digital audio output interface terminal.

It becomes enabled by using the appropriate command.

When serial audio output is selected, The output format can be selected from the EIAJ format or I<sup>2</sup>S format of 32fs, 48fs or 64fs .

Selectable With the mode that the sample rate of the playback tune is outputted and the mode fixed on 44.1 kHz by sample rate converter.

Figure 16. - Figure 21. show the output formats.

Figure 16. I²S Output Timing (32fs)

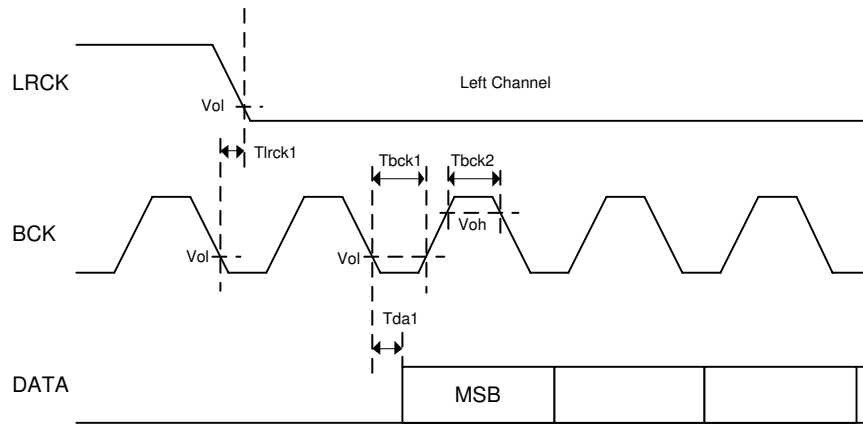

Figure 22. I<sup>2</sup>S, EIAJ Output Timing

8. Digital audio output (SPDIF)

Digital audio interface

Signal Name	I/O	Function	Remarks
SPDIF	O	SPDIF output	-

SPDIF output become enabled by setting it using the appropriate command. Figure 23. shows the digital audio signal output format.

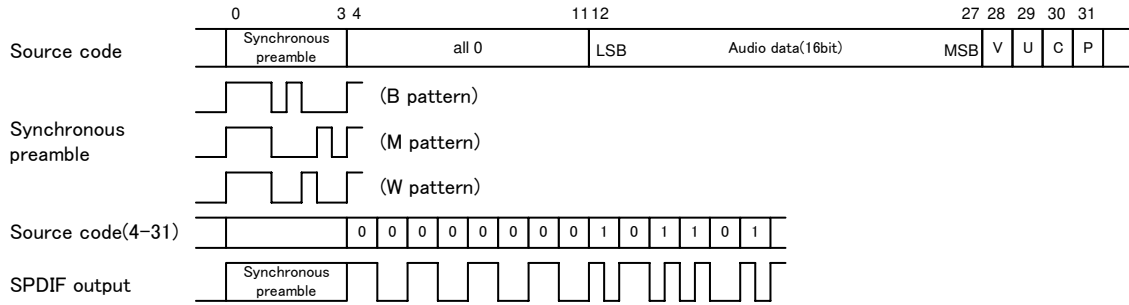

Figure 23. SPDIF Output Format

One sub frame of SPDIF consists of synchronous preambles, 16-bit audio data, V bit (validity flag), U bit (user data), C bit (channel status) and P bit (parity bit). Output rate is fixed to 1X speed.

SPDIF outputs synchronous preambles (source code 0-3) as they are, and other elements (source code 4-31) as the biphase output. While the operation stops, L output is enabled.

Synchronous preambles and C bit use 32 frames (≈4.4 ms) for one cycle. The data formats are shown in Tables.2 and 3 V bit is fixed to L. U bit uses 98 frames (≈13.3 ms) for one cycle

Table 2. Synchronous Preamble Pattern

	L0	R0	L1	R1	L2	R2	L3	R3	L4	R4	L5	R5
0	B	W	M	W	M	W	M	W	M	W	M	W
1	M	W	M	W	M	W	M	W	M	W	M	W
:	:	:	:	:	:	:	:	:	:	:	:	:
31	M	W	M	W	M	W	M	W	M	W	M	W

Table 3. C Bit Format

	L0	R0	L1	R1	L2	R2	L3	R3	L4	R4	L5	R5
0	0		0		Copy		0		0		0	
1	0		0		1		0		0		0	
2	0		0		0		Lbit		0		0	
3	0		0		1	0	0	1	0		0	
4	0		0		0		0		0		0	
5	0		0		0		0		0		0	
:	:		:		:		:		:		:	
31	0		0		0		0		0		0	

Table 4. U Bit Format

	L0	R0	L1	R1	L2	R2	L3	R3	L4	R4	L5	R5
0	0	0	0	0	0	0	0	0	0	0	0	0
1	0	0	0	0	0	0	0	0	0	0	0	0
2	1	0	0	0	0	0	0	0	0	0	0	0
3	1	0	0	0	0	0	0	0	0	0	0	0
:	:	:	:	:	:	:	:	:	:	:	:	:
97	1	0	0	0	0	0	0	0	0	0	0	0

P bit is set to 1 if the number of “1” contained in source codes 4-30 is odd, and set to 0 if the number is even. Therefore, the number of source codes to be set to 1 for one data must be even, SPDIF ends with L output, and preamble output always starts in the same direction.

8.1 SPDIF Output Timing

(Unless specified, Ta=25°C, VDD1=3.3V, Load=20pF)

Item	Symbol	Rating			Unit	Remarks
		min	typ	max

SPDIF Clock High time	Tck1	157	177	-	ns	
SPDIF Clock Low time	Tck2	157	177	-	ns	
Output High Voltage	Voh	VDD1-0.4	-	-	V	
Output Low Voltage	Vol	-	-	0.4	V	

Figure 24. SPDIF Output Timing

9. I<sup>2</sup>C command interface

Slave I<sup>2</sup>C serial interface

Signal name	I/O	Function	Remarks
SCL	I	I <sup>2</sup> C interface clock input	External pull-up resistor is required.
SDA	I/O	I <sup>2</sup> C interface data I/O	External pull-up resistor is required.

This is an I<sup>2</sup>C serial interface terminal to communicate with the microcomputer (master). It supports slave I<sup>2</sup>C operations.

9.1 I<sup>2</sup>C protocol

When the I<sup>2</sup>C bus is in the IDLE state, SDA and SCL are set to H by the external Pull-up resistor. To start communications, the master sets SDA to L while SCL set to H (Start condition). To finish communications, the master sets SDA to H while SCL set to H (Stop condition). During transfer, the master changes SDA only while SCL is L. Figure 25. shows Start condition and Stop condition of I<sup>2</sup>C.

Figure 25. I<sup>2</sup>C Start and Stop Conditions

9.2 Slave address

I<sup>2</sup>C bus slave addresses support the 7-bit addressing mode. Figure 26. shows the slave address transfer format.

Figure 26. Slave Address Transfer Format

Table 5. Settable Slave Addresses

MSB	A5	A4	A3	A2	A1	LSB A0
1	0	0	0	0	1	1

9.3 Protocol to write from the master

When sending commands from the master using the I<sup>2</sup>C bus, be sure to conform to the transfer protocol shown in Figure 27.

Figure 27. Command Send Protocol

9.4 Protocol to read to the master

When sending the received data from the slave to the master using the I<sup>2</sup>C bus, be sure to conform to the transfer protocol shown in Figure 28. First, transfer the status read command (step1). Then, input SCL clock of required bytes in step2 to read the status.

If the device status is BUSY when receiving the device status or the data within the memory, the I<sup>2</sup>C bus may be occupied by the device in BUSY. This LSI transfers the data to the master to avoid such occupation of the bus. However, as the BUSY status still exists internally, the proper data may not be transferred in BUSY. To cope with this situation, the first byte of the transfer data (step2) is used to judge whether the transferred data is valid or invalid. After addressing from the master to the slave, if the 0 bit of the first byte of the transfer data immediately after requiring the data transfer is 0, the data transferred from the slave is valid. If the 0 bit of the first byte is 1, it shows the BUSY status. Thus, judge all the transferred data to be invalid. If this happens, retry Step1 to send commands to read the status.

The first byte of the transferred data (step2) can be readable as the BUSY byte. Please read the status after sending the status read command (step1). In addition, internal statuses other than BUSY shown in Table 6. can be read.

The first byte of the transferred data (step2) can be readable as the BUSY byte. Please read the status after sending the status read command (step1). In addition, internal statuses other than BUSY shown in Table.7 can be read.

Figure 29. shows the relationship between the transferred data and BUSY.

Table 6. BUSY Byte Structure

bit	STATUS
7	0
6	0
5	0
4	PRECOM
3	IRPTO
2	SEARCH
1	MCHNG
0	BUSY

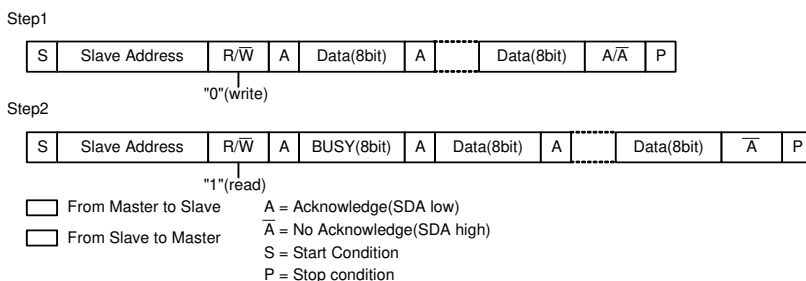

Figure 28. Status Reception Protocol

Figure 29. Relationship between Transferred Data and BUSY

9.5 I<sup>2</sup>C Bus line timing

Table 7. I<sup>2</sup>C Bus line timing

SDA and SCL bus-line characteristic (Unless specified, Ta=25°C, Vcc=3.3V)

Parameter	Code	Min.	Max.	Unit
1 SDA, SCL H input voltage	V <sub>IH</sub>	VDD*0.7	VDD	V
2 SDA, SCL L input voltage	V <sub>IL</sub>	DVSS	VDD*0.3	V
3 SDA H output voltage	V <sub>OH</sub>	VDD-0.4	VDD	V
4 SDA L output voltage	V <sub>OL</sub>	0	0.4	V
5 SCL clock frequency	f <sub>SCL</sub>	0	400	kHz
6 Bus-free-time between "Stop" condition and "Start" condition	t <sub>BUF</sub>	1.3	—	μS
7 Hold time for "Start" condition After this, the first clock pulse is generated.	t <sub>HD;STA</sub>	0.6	—	μS
8 LOW status hold-time of SCL clock	t <sub>LOW</sub>	1.3	—	μS
9 HIGH status hold-time of SCL clock	t <sub>HIGH</sub>	0.6	—	μS
10 Data-hold-time	t <sub>HD;DAT</sub>	0*	—	μS
11 Date-setup-time	t <sub>SU;DAT</sub>	100	—	ns
12 Rising time of SDA and SCL signal	t <sub>R</sub>	20+0.1*Cb	300	ns
13 Fall time of SDA and SCL signal	t <sub>F</sub>	20+0.1*Cb	300	ns
14 Setup time of "Stop" condition	t <sub>SU;STO</sub>	0.6	—	μS
15 Capacitive load of each bus-line	C <sub>b</sub>	—	400	pF

The above-mentioned numerical values are all the values corresponding to V<sub>IH min</sub> and V<sub>IL max</sub> level.  
 \*To exceed an undefined area on falling edged of SCL, transmission device should internally offer the hold-time of 300ns or more for SDA signal (V<sub>IH min</sub> of SCL signal).  
 Because the "Repeated Start" condition to send "Start" condition without sending "Stop" condition doesn't correspond, after sending "Start" condition, always send "Stop" condition.  
 Neither terminal SCL nor terminal SDA correspond to 5V tolerant.

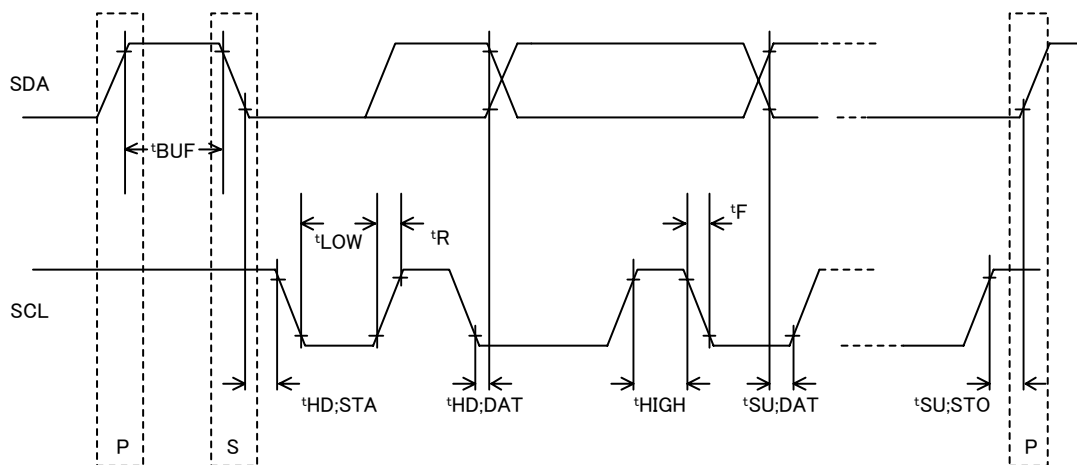

Figure 30. I<sup>2</sup>C Bus line timing chart

## 10. Interrupt Signals to microprocessor

## 10.1 BUSY

BUSY status detection output

Signal name	I/O	Function	Remarks
BUSY	O	BUSY status detection output signal	H: Busy, L: Not Busy

This is output to indicate that the LSI is in the BUSY status.  
 A BUSY signal outputs H until analyzing a command from the master and starting the command operation.  
 The command input to this LSI in BUSY status is unacceptable.  
 Connect it to the PIO port of the microcomputer.

## 10.2 MCHNG

Tune number change detection output

Signal name	I/O	Function	Remarks
MCHNG	O	Tune number change detection output signal	H: During playing, L: At the end or stop of tune

This signal outputs the information which tells that the file within the memory is being played or the file to be played is changed.  
 Precisely, the signal outputs H during the internal decode sequence operation, and L at stop of the operation.  
 Connect it to the interruption port of the microcomputer.

## 10.3 SEARCH

SEARCH status detection output

Signal name	I/O	Function	Remarks
SEARCH	O	SEARCH status detection output signal	H: SEARCH, L: Not SEARCH

This is output to indicate that the LSI is in the SEARCH status.  
 A SEARCH signal becomes H at the time of memory mount, file search, TAG analysis and TOC analysis.  
 This signal is OR of the 2-bit SEARCH status.  
 The LSI ignores command input during SEARCH. However, it can accept only ABORT, STOP and status read commands even during SEARCH and can execute them command.  
 Connect it to the PIO port of the microcomputer.

## 10.4 IRPTO

Interrupt output to microcomputer

Signal name	I/O	Function	Remarks
IRPTO	O	Interrupt output to microcomputer	H: Interrupt, L: Not Interrupt

This is output to indicate that the LSI is now requiring interruption to the microcomputer.  
 Change from L to H shows that an interruption has occurred.  
 When signage is H, it is shown that interrupt occurs.  
 Connect it to the interruption port of the microcomputer.

## 11. File search

### 11.1 Function

- The file search function supports file system of FAT32, FAT16 and FAT12. (NTFS is not supported.)
- The number of maximum playable files per folder follows the specification of FAT.

Table 8. Maximum Playable Files per Folder

	Root folder	Sub folder
FAT12	512	65534
FAT16	512	65534
FAT32	65535	65534

The number of files described above includes folders and files other than playable files (WAV/AAC/WMA/MP3). Thus, if non-playable files or folders contain in the above folders and the number of total files exceeds the maximum limit, all the playable files may not be played.

- Less than 256 files in the order of FAT within each folder are sorted according to UNICODE. More than 256 files, if any, will be sorted in the FAT order. The same rule is applied when sorting sub-folders. More than 100 sub-folders, if any, will be sorted in the FAT order. Sorting function can be selected valid or invalid with a command. The folder hierarchies up to 16 hierarchies whose full path including the file name is within 260 characters can be searched.

### 11.2 Playable file

The playable file extension is \*.WAV for the WAV file, \*.M4A, \*.3GP and \*.MP4 for the AAC file, \*.ASF and \*.WMA for the WMA file, and \*.MP3, \*.MP2 and \*.MP1 for the MP3 file. (There is no distinction between upper case letters and lower case letters.) Note that the file operation differs in the following cases

- Codec selection command: For details, please see  
SET\_MP3 / SET\_WMA / SET\_AAC / SET\_WAV / SET\_MP3\_PLAY command specifications.
- Attribute: Files with hidden attributes are also playable. Files with system attributes cannot be played.
- File name: The file name, including its size, does not depend on playability.
- File size: A file with file size "0" is not recognized as a playable file.

### 11.3 File playing sequence

The file playing sequence depends on the following rules when sort function valid. See Figure 28.

- [1] Files of 1 to 256, in the order written to FAT (FAT order) in each folder, are sorted in the order of UNICODE. Files more than 256 are played in the FAT order. The same rule is applied when sorting sub-folders. All the folders including null ones and those to which no playable file is written are sorted (selectable setting by command). If over 256 playable files or sub-folders are contained in the folder, they are played in the order written to the FAT directory entries. The writing method of directory entries will not help understand the file play order because the method depends on the OS operation at writing.
- [2] When a playable file exists in the root folder (the top hierarchy), the file is to be played first.
- [3] After all the playable files within the root folder have been played, playable files in the folder in the lower hierarchy, if any, are played.
- [4] If another folder exists in the lower hierarchy, playable files within this folder are played. If not, the LSI searches other folders in the same hierarchy. If another folder exists there, the LSI plays that folder.
- [5] After playing all the files, the LSI returns to the root folder as in [2] and play the files starting with the top sorted one.

11.4 Folder/File sort

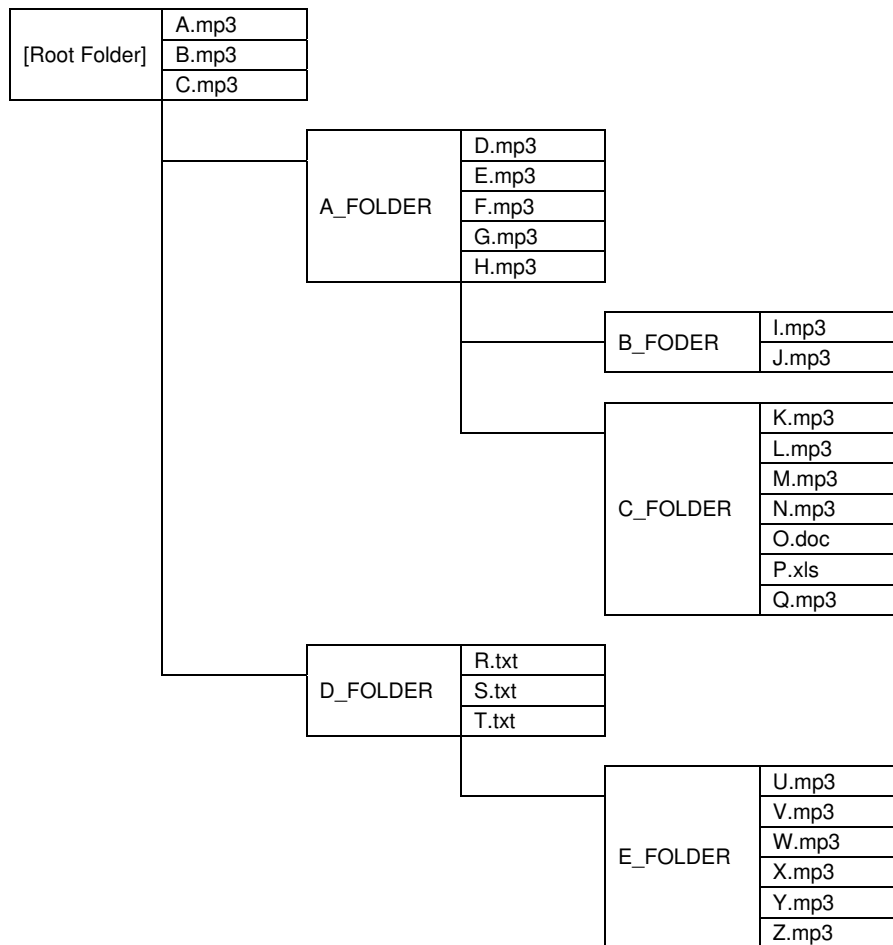

The LSI sorts the sub-folders and files in the following sequence:

- [1] Obtain up to 256 sub-folders and files each in the order written to FAT within selected folder.
- [2] Compare the obtained folder/file names for 8 characters (16 bytes) from the beginning in UNICODE (2-byte character) and sort them in the ascending order. \*
- [3] If there are files/folders with same character strings: follow the order of MP3, WMA, AAC and WAV when the extension is different; and, otherwise, follow the order written to FAT.
- [4] 101 or more files or sub-folders follow the order written to FAT.

\* The processing of the file name and the folder name is shown in the following.

- 1) When a LFN (long file name) entry exists, 2 bytes are treated as one character.
- 2) When no LFN entry exists, the SFN(short file name) entry is processed as follows.
  - 2-a) When the first appeared character code is within the range of 0x00-0x7F (US-ASCII), the LSI treats one byte as one character, and adds '0x00' to the upper of the character to expand the entire character to an UNICODE.
  - 2-b) For a case other than 2-a), practically, the LSI treats these 2 bytes as one character.

\*For details on LFN and SFN, see the FAT file system specifications.

◇ Figure 31. Example of Folder/File Structure within the Memory Device

Table 9. File Play Sequence for Folder/File Structure in Figure 28.

Playing sequence	File to be played	Remarks
1	A.mp3	-The LSI first starts playing the playable files in the root folder, if any. -The files are played in the ascending order of UNICODE given to each file name.
2	B.mp3	
3	C.mp3	
4	D.mp3	-After playing all the playable files in the root folder, the LSI searches folders in the lower hierarchy.
5	E.mp3	
6	F.mp3	-The folders are searched in the ascending order of UNICODE given to each folder name.
7	G.mp3	
8	H.mp3	
9	I.mp3	
10	J.mp3	
11	K.mp3	
12	L.mp3	
13	M.mp3	
14	N.mp3	
15	Q.mp3	-Unplayable files are ignored.
16	U.mp3	-After playing all the playable files including those in A_FOLDER and in its lower hierarchy, the LSI moves to the hierarchy in which A_FOLDER exists and searches files.
17	V.mp3	
18	W.mp3	
19	X.mp3	-In this case, since no playable file exists in D_FOLDER, which is in the same hierarchy of A_FOLDER, the LSI plays the playable files in E_FOLDER in the further lower hierarchy.
20	Y.mp3	
21	Z.mp3	

#### 11.5 Search within multi-drive and multi-partition

If a device is a multi-drive type or multi partition type, the LSI can recognize the drive by selecting LUN (Logical Unit Number) for the supporting FAT.

If particular LUN isn't selected, the LSI mounts the device whose LUN detected first. (default)

It is possible that Test Unit Ready of other LUNs is confirmed during the playback.

#### 11.6 External HUB search

When the USB connector is connected to a HUB, and a FAT-supported drive is connected ahead of the HUB at mounting the USB for this LSI, only one drive is recognized.

The LSI does not support external HUBs, it cannot detect plugging/unplugging of the drive ahead of the HUB after the USB is mounted.

## 12. Playing files

### 12.1 Function

For the files judged to be playable through the file search function, the LSI automatically switches the decoder using the file extension and decodes these files.

Fast forward play and rewinding play operations are available.

Also, repeat play and random play are available.

### 12.2 Playable file formats

#### 12.2.1 MP3 file format

This format supports MPEG Audio 1, 2, 2.5 and Layer 1, 2, 3.

It supports sample rates of 8 kHz, 16 kHz, 32 kHz, 11.025 kHz, 22.05 kHz, 44.1 kHz, 12 kHz, 24 kHz and 48kHz.

It supports bit rates of 8 to 320kbps and VBR (Variable Bit Rate).

#### 12.2.2 WMA file format

This format supports WMA Ver.9 Standard.

It supports sample rates of 8 kHz, 16 kHz, 32 kHz, 11.025 kHz, 22.05 kHz, 44.1 kHz and 48 kHz.

It supports bit rates of 5 to 384kbps and VBR (Variable Bit Rate).

It does not support DRM.

It supports ASF files including audio streams only.

#### 12.2.3 AAC file format

This format supports MPEG4 AAC-LC.

It conforms to iTunes and 3GPP TS 26.244.

It supports file types of m4a, mp42 and 3gpX. (X is an arbitrary numeric value.)

iTunes is validated in the following versions: 4.\*, 5.\*, 6.\* and 7.0-7.5.

It supports sample rates of 8 kHz, 16 kHz, 32 kHz, 11.025 kHz, 22.05 kHz, 44.1 kHz, 12 kHz, 24 kHz and 48 kHz.

It supports bit rates of 8 to 320kbps and VBR (Variable Bit Rate).

It does not support DRM.

#### 12.2.4 WAV file format

This format supports RIFF WAVE.

It supports sample rates of 8 kHz, 16 kHz, 32 kHz, 11.025 kHz, 22.05 kHz, 44.1 kHz, 12 kHz, 24 kHz and 48k Hz.

If you try to play a file created in any format other than above, the LSI immediately terminates decoding it.

### 12.3 Playing files having damaged data

If the data section of the MP3 file is damaged, the LSI plays the music data in the possible range instead of ceasing to play the entire file. It mutes the unplayable section. However, AMUTE terminal remains H output.

If the data section of the WAV file is damaged, noises are output.

The LSI executes other files within the playable range and stops playing. Then, it skips to the next tune.

If a part of the data header is damaged, the LSI immediately terminates playing and skips to the next tune.

If the file's extension is playable but its file's data does not have a format supporting to the extension, the LSI immediately terminates playing and skips to the next tune.

If the file does not have a file format, the LSI immediately terminates playing and skips to the next tune.

However, when the file data is structured in a format other than MP3 and its file extension is \*.MP3, \*.MP2 or \*.MP1, the LSI plays it in the silence mode basically. However, if the LSI can read any playable data, it plays the file partially.

In this case, the time information which is output as the serial status also becomes unstable. The time information is then partially output but you cannot obtain the correct information.

12.4 NEXT playing mode and Repeat playing mode

You can select the operation as shown below depending on the next playing mode, repeat mode and random mode.

Next playing mode

- [1] PLAY\_NEXT: Automatically searches the next tune after the tune being played ends and starts playing the next tune.
- [2] PLAY\_ALL\_STOP: After the last tune being played within the memory ends, stops upon completion of search for the next tune.  
Starts playing the next tune by the play command issued subsequently.
- [3] PLAY\_FOL\_STOP: After the last tune being played within the folder ends, stops upon completion of search for the next tune.  
Starts playing the next tune by the play command issued subsequently.
- [4] PLAY\_TUN\_STOP: After the tune being played ends, stops upon completion of search for the next tune.  
Starts playing the next tune by the play command issued subsequently.

Repeat mode

- I : REPEAT\_ALL: After playing all the tunes within the memory in process, starts playing them from the beginning of the memory.
- II : REPEAT\_FOL: Repeats playing tunes within the folder in process.
- III : REPEAT\_TUN: Repeats playing the tune in process. The operation at the time of FF and FB command reception follows a setup of a SET\_REPRAND command.
- IV : RANDOM\_ALL: Plays the range of ±128 files from the current tune being played at random within the memory.
- V : RANDOM\_FOL: Plays the range of ±128 files from the current tune being played at random within the folder in process.

Select one operation from next play mode and repeat mode respectively to determine the operation.  
When repeat mode is REPEAT\_FOL, the PLAY\_ALL\_STOP becomes invalid, and serves as PLAY\_NEXT.  
When repeat mode is [3][4][5], the PLAY\_ALL\_STOP and PLAY\_FOL\_STOP becomes invalid, and serves as PLAY\_NEXT.

	I : REPEAT_ALL	II : REPEAT_FOL	III : REPEAT_TUN	IV : RANDOM_ALL	V : RANDOM_FOL
[1] PLAY_NEXT	○	○	○	○	○
[2] PLAY_ALL_STOP	○	×	×	×	×
[3] PLAY_FOL_STOP	○	○	×	×	×
[4] PLAY_TUN_STOP	○	○	○	○	○

## 13. Command operations

## 13.1 Write command

The LSI allows command operations from an external microcomputer via a slave I<sup>2</sup>C serial interface. The command length to be sent varies depending on the command.

Table 9. shows the command specifications.

Table 10. shows enabled/disabled state of each command.

Table 9. Command Operations

Command name	Command Byte length	Command				Explanation of operation
		1st	2nd	3rd	4th	
CONFIG						
CHG_SYSTEM_MODE	4	0x60	0x00	N	0x00	<ul style="list-style-type: none"> <li>Set up System Operation Mode.</li> <li>Please choose 3rd byte N from the following. The other setup does not receive a command. Please be sure to perform the changes to each mode via CONFIG mode. 13.2 Status output

The operation information, such as internal statuses, play time, folders, files and Tags, is output using an I<sup>2</sup>C interface. The statuses shown in Table 11. Status Register Map is output.

When reading status via I<sup>2</sup>C, the OFFSET position is automatically incremented after reading byte data. However, by issuing the I<sup>2</sup>C start condition, the OFFSET position is reset to OFFSET specified by the previous command.

To read statuses, two methods are available: to specify OFFSET of the status register map and read any bytes continuously from the OFFSET position; and to read byte data by a command without specifying the OFFSET position. Table 12. shows the status output commands.

Byte data, when reading via I<sup>2</sup>C, is output in Little Endian format.

When read over OFFSET=0x140, OFFSET does not return to 0x00, therefore the read value turns into an unfixed value.

## 14. System Operation MODE

The LSI starts operation by setting up System Operation MODE after download of the program by IPL after a power supply and reset release.

Possible operation changes with each modes of operation.

Only the one mode can set up mode of operation with a command.

The mode which is simultaneously different cannot be set up.

A microcomputer sets up the change in System Operation MODE with a command.

Please be sure to perform the changes to each mode via CONFIG mode.

The changes between PLAYER mode and FILEREAD mode cannot be performed directly.

The settlement of the following command is to do a re-setup because it is returned in the initial value when it passes through the CONFIG mode.

REPEAT, RANDOM, SET\_EQ, SET\_NEXT, SET\_REPRAND, SET\_TAG, SET\_PRM

Command CHG\_SYSTEM\_MODE

N=0x00 ; CONFIG MODE

It is in the state which changes after a power supply

It is the mode which performs initial setting of a system.

Please change to the mode of other operation after setting up with an initial-setting command.

In this mode, even if it detects insertion of a memory, mount of a memory is not performed.

The mount of a memory carried out behind each mode changes.

N=0x01 ; PLAYER MODE

It is the mode which performs decoding play of the file in a memory.

File browsing (structural analysis in a memory) can be performed.

N=0x02 ; FILE Read MODE

It is the mode which Reading can perform about the specific file in a memory.

A specific file can be deleted.

File browsing (structural analysis in a memory) can be performed.

## 15. Resume information

This LSI outputs the information for resume function, using READ\_RESUME\_INFO command.

Table 14. Resume information register structure

Status OFFSET	The number of bytes	NAME	Contents
0x38-0x61	42	Resume information data	This data shows the information on the file being played and on the play position. The data has a LSI-unique structure. The resume information data is data of 42 bytes. It outputs with a little endian.

The above resume information has a LSI-unique structure and is used when executing resume play. Therefore, you should use the data contents as they are without rewriting.

The resume function is implemented by writing the resume information read by READ\_RESUME\_INFO command to PLAY\_RESUME command. After writing to PLAY\_RESUME, the LSI automatically searches the resume. As for the action of the searches end, selectable from [Playback is started in the time when 「READ\_RESUME\_INFO」command was forwarded], [top (Pause) in the time when 「READ\_RESUME\_INFO」command was forwarded], [Playback is started from the front of the tune when 「READ\_RESUME\_INFO」command was forwarded], [Stop (Pause) the front of the tune when 「READ\_RESUME\_INFO」command was forwarded].

After reading READ\_RESUME\_INFO command during file play, the LSI resumes the file from the time READ\_RESUME\_INFO has been read.

The data contents read by READ\_RESUME\_INFO command cannot assure the operations when executing PLAY\_RESUME which has been rewritten due to the positional information within the memory. If the resume information does not match because of change of memory, the LSI starts searches front file of memory.

## 16. File Name, Folder Name, TAG Information

A file name, a folder name, and TAG information are outputted to a status register.

The first 2 bytes to be output indicate file data ID information.

The target data is outputted from the 3rd byte.

A file name, a folder name, and TAG information status register structure are shown in Table 15.

Table 15. File (folder, TAG) information registers structure

Status OFFSET	The number of bytes	NAME	Contents
0x38	1	Data type	The type of data is outputted. 0x00; TEXT- NUL (0x00) Terminated character string 0x01; BYTE- Unsigned 1 byte integer
0x39	1	Encoding	Encoding of a character string is outputted. 0x00 ; ISO8859-1(Latin1) 0x01 : UTF-16(with BOM) 0x02 : UTF-16BE 0x03 : UTF-8 0x49 : UTF-16LE When a data type is except 0x00:TEXT, data length (byte unit) is outputted.
0x3A-0xB9	128	File name (Folder name, TAG)	A file name (or a folder name, TAG) is outputted by left fitting. Up to 128 bytes can be output. If the data is less than 128 bytes, it terminates with 0x00.

The character code information on TAG information is outputted to a status register.  
Character code information status register structure is shown in Table 16.

Table 16. Character code information registers structure

LANGH OFFSET=0x11	LANGL OFFSET=0x10	Language Code
0x00	0x00	ID3V1 TAG or ISO8859-1(ID3V2 TAG)
0x00	0x01	UTF-16 (ID3V2 TAG)
0x00	0x02	UTF-16BE (ID3V2 TAG)
0x00	0x03	UTF-8 (ID3V2 TAG or AAC TAG iTunes Meta-data)
0x00	0x49	UTF-16LE (WMA TAG)

## 17. File browsing within memory

The LSI can analyzing and reading of the entry information of files and subfolders within a folder which is different from the one having the current tune while the current tune is being played or stopped. Since the read information contains access data to be used to select tunes, the LSI enables to directly select and play tunes using this data.

File Browsing within the memory will be enabled by: operating the cursor position which can be controlled separately from the position of the tune being played and analyzing the folder to read the information on folders.

When sending the command to move the cursor, the LSI can analyze and read the information of 10 entries (files or folders) from the move destination.

The cursor movement conforms to the sort order determined by the sort function. If the sort function is enabled, the system first reads the files, and then the subfolders, in the sort order. If the sort function is disabled, the LSI reads the files and subfolders in the order that they are written to FAT.

A file browsing function becomes effective after ANALYSE\_ROOT command is send, and starts the analysis in a root folder.

When you select music directly by using the access data or cursor position, The following status doesn't return a normal value because it doesn't understand the number in the whole in the memory.

Playing folder number in memory status, Playing file number in the memory status.

The file information status register structure which can be read by the file browsing function in a memory is shown in Table 17.

Table 17. File (folder) information register structure

Status OFFSET	The number of bytes	NAME	Contents
0x38-0x3D	6	Access data	The position in the memory in which a file and folder information is written is shown. Direct song selection is possible from a microcomputer using this data.
0x3E	1	Entry type	The type of file is outputted. 0x0Y= file-native (LFN, SFN), 0x1Y= folder-native (LFN, SFN) 0x8Y= file-UTF16LE (LFN), 0x9Y= folder-UTF16LE (LFN) Y becomes the following cases. 0x1=MP3, 0x2=WMA, 0x3=AAC, 0x4=WAV , 0x6-0xE=reserve, 0xF,0x0=other file
0x3F	1	-	0x00
0x40-0x43	4	Cluster number	The cluster number in the memory in which a file and folder information is written is shown.
0x44-0x84	64	File name (Folder name)	A file name (folder name) is outputted by left fitting.

### Cautions)

If browsing operation is frequently performed during music playing, music skipping may occur by the memory with a slow access speed.

## 18. File data read

It is possible to read the contents of the specified file in a memory.

File name is specified by the full path (within 256 bytes) including a file name and an extension.

A full path including a file name and an extension supports to 16 classes within 256 bytes.

The above-operation can be performed when system operation mode is FILE Read mode.

19. IRPTO Interruption Terminal to Microcomputer

When some status changes, this LSI notifies interruption to master microcomputer by IRPTO terminal. When signal is H, it is shown that interrupt occurs. Please connect IRPTO terminal to the interruption port of level detection.

The mode of IRPTO signal output condition can be selected by SEL\_IRPTO command.  
 •variable interruption mode: IRPTO is unified output by two or more status change. Master microcomputer can select the status.  
 •fixed interruption mode: IRPTO is output by single status change according to system mode.

19.1 variable interruption mode

INTERRUPT REQUEST is caused from the IRPTO terminal to the microcomputer when either of the hereunder status register changes.

Interruption factor can be selected by SET\_MASK\_00-SET\_MASK\_37 command. The initial setting of the interruption factor is shaded status.

Table 18. Status registers for interruption factor

OFFSET	Status	bit7 (MSB)	bit6	bit5	bit4	bit3	bit2	bit1	bit0 (LSB)
0x00	STATUS1	ERROR	SEARCH		BUSY	MCHNG	STOP	PAUSE	PLAY
0x02	STATUS3	USBINS	SDINS	USBFILE	SDFILE	MDEVUSB	MDEVSD	PDEVUSB	PDEVSD
0x22	BROWSESTAT	ANA_ERR	0	0	GET_TAG_END	GET_TAG_ID			ANA_CUR
0x2F	FIOSTAT	FIOERR	0	0	FIOOPEN	FRDREADY	0	FIOSEARCH	FIOMODE
0x37	MEMINFO		MEMINFO			LUN_BUSY	LUN_READY_RENEW	reserve	reserve

IRPTO is returned to L when forego status is read out by using the READ\_IRPTO\_FACTOR command. Following table shows the contents of the output data by READ\_IRPTO\_FACTOR command.

The status value and interruption factor is included. When status changes, corresponding bit of interruption factor becomes H.

For example, when only ERROR status changes, Interruption factor 1 becomes 0x80.

Table 19. the contents of the output data by READ\_IRPTO\_FACTOR

STATUS OFFSET	byte	NAME	content
0x38 + 0x0	1	Status value 1	(Offset : 0x00) STATUS1
0x38 + 0x1	1	Status value 2	(Offset : 0x02) STATUS2
0x38 + 0x2	1	Status value 3	(Offset : 0x22) BROWSESTAT
0x38 + 0x3	1	Status value 4	(Offset : 0x2F) FIOSTAT
0x38 + 0x4	1	Status value 5	(Offset : 0x37) MEMINFO
0x38 + 0x5	1	Interruption factor 1	status change flag for Status value 1
0x38 + 0x6	1	Interruption factor 2	status change flag for Status value 2
0x38 + 0x7	1	Interruption factor 3	status change flag for Status value 3
0x38 + 0x8	1	Interruption factor 4	status change flag for Status value 4
0x38 + 0x9	1	Interruption factor 5	status change flag for Status value 5

## 19.2 Fixed interrupt mode

In fixed interruption mode, IRPTO is output by single status change according to system mode. Following table shows IRPTO signal output condition for each system mode.

State	Interruption	Contents
PLAYER MODE	MEMINFO = 0x3	An interrupt occurs when status register MEMINFO=0x03 (OFFSET=0x37, [7:4]). See 6.4.14. Selected memory information for content. Clear conditions; interruption is cleared by memory disconnection.
FILE READ MODE	FRDREADY	An interrupt occurs when a specified file is searched and read-out is ready. Clear conditions; interruption is cleared by data are read (block unit).

## 20. Previous Command Processing Situation

The previous command processing situation is outputted as status register STATUS6 (OFFSET=0x05) PRECOMSTAT. Bit0 of STATUS6 (OFFSET=0x05) and Bit2 of STATUS2 (OFFSET=0x01) is the same value. When Bit2 of STATUS2 set to "0", the previous command is normally processed. When Bit2 of STATUS2 set to "1", the previous command is not processed.

The following shows the value descriptions.

Value	NAME	Cause of being unprocessed
0x01	UNCLASSIFIED	Non classification error
0x03	UNKNOWN CMD	Undefined command
0x05	SEARCH	Searching now
0x07	INVALID ARG	Invalid parameter is detected.
0x09	WRONG MODE	Invalid command in the current system operation mode
0x0B	NOT READY	Initialization is not completed.
0x0F	NOT IMPLEMENTED	The function is not mounted.
0x15	DEVICE ERROR	Device error

## 21. Selected memory information

The kind and information on a device which are chosen now are outputted by a READ\_MEMINFO command.

An output value is cleared at the memory disconnection or CHG\_DEV command reception, and is updated at the completion of mount operation.

The details of an output value are shown below.

Value[7:4]	Contents
0x0	Mounted USB device (playable device)
0x1	NO-Mounted USB device (file system un-support, etc.)
0x2	USB LOW SPEED device
0x3	USB device with two or more DEVICE CONFIGURATION
0x4	The USB device and SD device which cannot be recognized (USB enumeration failure etc.)
0x5	MEMINFO is undecided.
0x6	-
0x7	SD Card
0x8-0xF	It means that there is HUB, when Bit7 is H.

22. Process information when a media mount error

When media mount failure occurs, READ\_MOUNT\_ERROR command output the information on the stage of media mount operation.

After being set to ERROR=1, the detailed information about in which process the error occurred can be read with this command.

For example, when ERROR=1 and 1st byte=0x08 or 0x09, it turns out that mount error is caused by device response error for TEST UNIT READY or REQUEST SENSE.

The details of an output value are shown below.

1st byte (offset=0) of a read value outputs the process state of USB mount operation.

A read value corresponds to the processing which went wrong.

A read value is cleared at the start of a USB mount operation.

A read value is updated irrespective of the success or failure of mount operation at the completion of mount operation.

Read value	Process state	Read value	Process state
0x00	Before a start of operation	0x10	GET_DEVSTATUS
0x01	DEVICE_DESCRIPTOR acquisition	0x11	Sector read command send
0x02	SET_ADDRESS	0x12	Sector read command receive
0x03	CONFIG_DESCRIPTOR acquisition	0x13	Sector read status receive
0x04	End Point connect	0x14	-
0x05	SET_CONFIGURATION	0x15	-
0x06	GET_MAX_LUN	0x16	-
0x07	CLEAR_FEATURE	0x17	Not-supported Device Subclass
0x08	INQUIRY	0x18	Only HUB is connected
0x09	TEST UNIT READY	0x19	LOW DEVICE is detected
0x0A	REQUEST SENSE	-	-
0x0B	READ_CAPACITY	-	-
0x0C	CLEAR_PORT_FEATURE	-	-
0x0D	GET_PORT_STATUS	-	-
0x0E	SET_PORT_FEATURE	-	-
0x0F	HUB_DESCRIPTOR acquisition	-	-

2nd byte (offset=1) of a read value outputs the process state of SD initialization.

bit corresponding to the succeeded process is set to 1.

A read value is cleared at the start of a SD mount operation.

A read value is updated one by one during mount, irrespective of the success or failure of mount operation.

Update is stopped at the completion of mount operation

A read value is 0x00 before a start of operation.

bit	Process state
0	CMD0 response
1	CMD8 response
2	CMD55 response
3	CMD41 response
4	CMD58 response
5	CMD1 response

10th byte (offset=9) of a read value outputs the process state of FAT file system analysis.

A read value corresponds to the processing which went wrong.

A read value is updated one by one during mount, irrespective of the success or failure of mount operation.

Update is stopped at the completion of mount operation

Read value	Process state
0x00	Before a start of operation
0x01	MBR read
0x02	MBR analysis
0x03	BPB analysis
0x04	FAT table check

23. Patch Code Download

For play ability improvement to peculiar USB memory and SD card, This LSI supports to download a patch cord from a master microcomputer.

In Config mode, a patch is downloadable from a master microcomputer via I<sup>2</sup>C.

The whole patch image size sent into BU94502AMUV must be smaller than 8440 Bytes.

Please divide a patch image into packets within 504 bytes, send by SET\_PATCH\_CODE command.

After downloading all patch image packets , validate the patch image by SET\_PATCH\_CRC command.

- Generator polynomial uses CRC-CITT ( $X^{16} + X^{12} + X^5 + 1$ ).
- Initial value is 0xFFFF.
- Output XOR is 0x0000.
- A bit feed is the right feed.

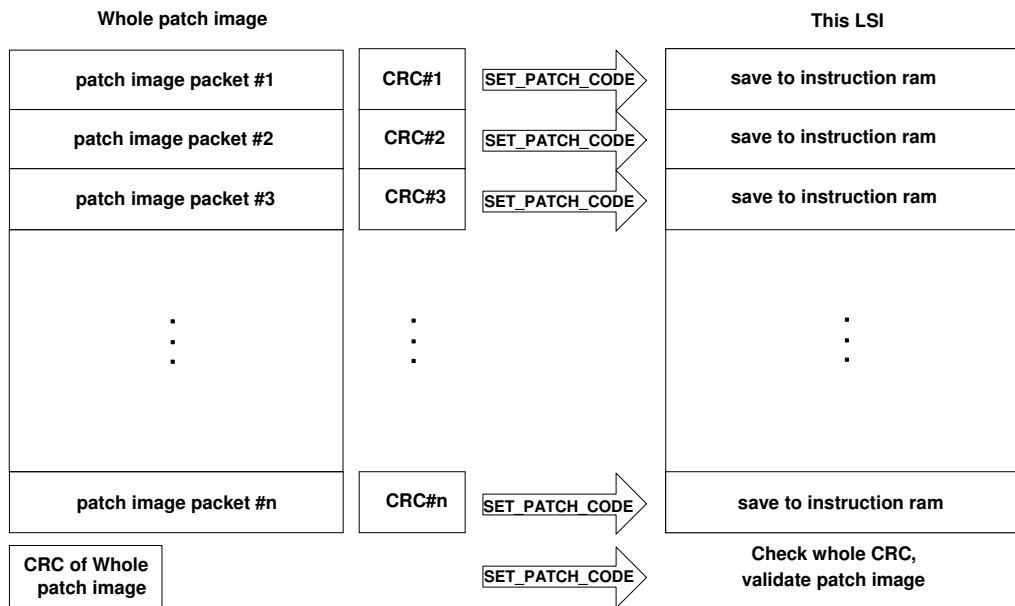

Figure 32. Concept of Patch Code Download

24. Watch Dog Timer

The LSI incorporates Watch Dog Timer, which monitors the system hang-up and resets whenever it occurs.

After resetting hang-up. Can disable WDT using DIS\_WDT command. Once WDT is disabled, it cannot be enabled until reset is input.

When WDT, in the valid status, detects a hang-up within the LSI regardless of external situations (on the microcomputer), the LSI resets the system internally.

To monitor whether the LSI is reset by WDT from the master microcomputer (external), use SET\_WDT command to write H to STATUS\_WDT\_RFLG and monitor this status. After reset, this status is read as L. This helps you judge that WDT has reset the LSI by reading out L when reading the status regularly after writing H using SET\_WDT command.

## ●Notes for use

## (1)Power on Reset

Please keep the terminal RESETX at the Low level when the power supply starts. Please make the terminal RESETX High level after 100us after 3.3V system power supply and the oscillation of the system clock is steady. Moreover, please make the terminal RESETX Low level during 100us or more when resetting it while operating.

## (2) About compatibility in USB memory device and SD memory card

According to the file structure and communication speed of an USB memory, SD memory card, this LSI might not play back correctly.

## (3) About turning on the power supply

Current rush might flow momentarily by the order of turning on the power supply and the delay in IC with two or more power supplies, and note the capacity of the power supply coupling, the power supply, and width and drawing the GND pattern wiring.

## (4) About absolute maximum rating

When the absolute maximum rating such as the applied voltage and the ranges of the operating temperature is exceeded, LSI might be destroyed. Please apply neither voltage nor the temperature that exceeds the absolute maximum rating. Please execute physical measures for safety such as fuse when it is thought to exceed the absolute maximum rating, and examine it so that the condition to exceed the absolute maximum rating is not applied to LSI.

## (5) About GND Voltage

In any state of operation must be the lowest voltage about the voltage of the terminal GND. Please actually confirm the voltage of each terminal is not a voltage that is lower than the terminal GND including excessive phenomenon.

## (6) About design of overheating malfunction preventive circuit

Please design overheating malfunction preventive circuit with an enough margin in consideration of a permissible loss in the state of using actually.

Use a thermal design that allows for a sufficient margin in light of the power dissipation (Pd) in actual operating conditions. VQFN040V6060 package (BU94501AMUV / BU94502AMUV) exposes its frame of the backside of package. Note that this part is assumed to use after providing heat dissipation treatment to improve heat dissipation efficiency. Try to occupy as wide as possible with heat dissipation pattern not only on the board surface but also the backside.

## (7) About the short between terminals and the mounting by mistake

Please note the direction and the gap of position of LSI enough about LSI when you mount on the substrate.

LSI might be destroyed when mounting by mistake and energizing. Moreover, LSI might be destroyed when short-circuited by entering of the foreign substances between the terminal and GND, between terminals, between the terminal and the power supply of LSI.

## (8) About operation in strong electromagnetic field

Use in strong electromagnetic field has the possibility of malfunctioning and evaluate it enough, please.

## (9) Browsing operation

With a memory with slow access speed, Browsing operation during music playing may generate skipping.

## (10) Playing time of MP3 file

The playing time when it can be acquired at the time of playing the MP3 file, may shift when fast forward playing, rewinding playing, and VBR playing.

## (11) About WMA

Windows Media Audio is the music compression technology which Microsoft Corp. developed.

Windows Media is the registered trademark of U.S. Microsoft Corporation in the U.S., and other countries.

(12) About I<sup>2</sup>C format I/F

Although this LSI has adopted the I<sup>2</sup>C format, the level shifter circuit is not built in.

For this reason, level shifter is needed for connection with the device besides the range of operating power supply voltage of this LSI.

## (13) About " Made for iPod / iPhone / iPad License "

For using of BU94502AMUV / BU94502AKS2, It is necessary to become a licensee of Apple Inc. regarding "Made for iPod/iPhone/iPad License"

## Status of this document

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

**Precautions Regarding Application Examples and External Circuits**

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

**Precaution for Electrostatic**

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

**Precaution for Storage / Transportation**

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

**Precaution for Product Label**

QR code printed on ROHM Products label is for ROHM's internal use only.

**Precaution for Disposition**

When disposing Products please dispose them properly using an authorized industry waste company.

**Precaution for Foreign Exchange and Foreign Trade act**

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

**Precaution Regarding Intellectual Property Rights**

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

**Other Precaution**

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
