Thermal Considerations

In order to ensure safe operation of the PSU in the most adverse conditions permitted in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. See mechanical drawing for component locations. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow).

Temperature Measurements at Maximum Ambient 50°C	
Component	Max Temperature °C
T1	120°C
C9	90°C
C19	100°C
Q1	110°C
Q2	110°C
