

## PremierWave® EN Embedded System on Module Data Sheet

### General Description

PremierWave EN embedded system on module delivers a new dimension of Wi-Fi networking with the highest levels of security to virtually any electronic product. It provides affordable connectivity in a compact form factor, enabling OEMs to add Wi-Fi or wired Ethernet networking to their products on a single PCB design.

With a choice of flexible, media-independent modules ranging from Ethernet, Wi-Fi and ultra-secure Wi-Fi, the PremierWave EN takes the complexity out of RF design and networking. OEMs can focus on their core competencies while minimizing engineering risk, shortening development time and reducing development cost.

PremierWave EN has a dedicated 32-bit processor module running at 400 MHz and features 32 Kbyte Data Cache, 32 Kbyte Instruction Cache, embedded 64 Kbyte ROM, 16 Kbyte SRAM and a Memory Management Unit.

With options for up to 64Mbyte of SDRAM and up to 256Mbyte of NAND Flash, PremierWave EN can easily manage wireless connectivity and web services.

With its combination of high performance CPU, ample memory, variety of serial interface options (Serial, I2C, High Speed SPI, USB 2.0) and Linux OS, PremierWave EN can be designed as the primary host processor, for most demanding embedded applications.

PremierWave EN offers an unmatched portfolio of security technologies. PremierWave EN goes far beyond compliance with the popular 802.11i, WPA and WPA2 wireless security specifications. It ensures data integrity and privacy for highly sensitive requirements, such as medical or financial applications.
