

### FEATURES

- Member of the Texas Instruments Widebus™ Family
- High-Bandwidth Data Path (up to 500 MHz (1))
- 5-V Tolerant I/Os With Device Powered Up or **Powered Down**
- Low and Flat ON-State Resistance (r<sub>on</sub>) **Characteristics Over Operating Range**  $(r_{on} = 5 \Omega Typ)$
- Rail-to-Rail Switching on Data I/O Ports - 0- to 5-V Switching With 3.3-V V<sub>cc</sub> - 0- to 3.3-V Switching With 2.5-V V<sub>cc</sub>
- **Bidirectional Data Flow With Near-Zero**
- **Propagation Delay** Low Input/Output Capacitance Minimizes
- Loading and Signal Distortion (C<sub>io(OFF)</sub> = 4 pF Typ)
- Fast Switching Frequency ( $f_{OF} = 20$  MHz Max) .
- **Data and Control Inputs Provide Undershoot Clamp Diodes**
- Low Power Consumption (I<sub>cc</sub> = 1 mA Typ)
- V<sub>cc</sub> Operating Range From 2.3 V to 3.6 V
- Data I/Os Support 0- to 5-V Signaling Levels (0.8 V, 1.2 V, 1.5 V, 1.8 V, 2.5 V, 3.3 V, 5 V)
- Control Inputs Can Be Driven by TTL or 5-V/3.3-V CMOS Outputs
- Ioff Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- **ESD Performance Tested Per JESD 22** 
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)
- Supports Both Digital and Analog **Applications: PCI Interface, Differential Signal** Interface, Memory Interleaving, Bus Isolation, Low-Distortion Signal Gating
- (1) For additional information regarding the performance characteristics of the CB3Q family, refer to the TI application report, CBT-C, CB3T, and CB3Q Signal-Switch Families, literature number SCDA008.

## SN74CB3Q16245 16-BIT SWITCH 2.5-V/3.3-V LOW-VOLTAGE FET BUS SWITCH

SCDS171A-JULY 2004-REVISED MARCH 2005

### **DESCRIPTION/ORDERING INFORMATION**

The SN74CB3Q16245 is a high-bandwidth FET bus switch utilizing a charge pump to elevate the gate voltage of the pass transistor, providing a low and flat ON-state resistance (r<sub>on</sub>). The low and flat ON-state resistance allows for minimal propagation delay and supports rail-to-rail switching on the data input/output (I/O) ports. The device also features low data I/O capacitance to minimize capacitive loading and signal distortion on the data bus. Specifically designed to support high-bandwidth applications, the SN74CB3Q16245 provides an optimized interface solution ideally suited for broadband communications, networking, and data-intensive computing systems.

The SN74CB3Q16245 is organized as two 8-bit bus switches with separate output-enable  $(1\overline{OE}, 2\overline{OE})$  inputs. It can be used as two 8-bit bus switches, or as one 16-bit bus switch. When  $\overline{OE}$  is low, the associated 8-bit bus switch is ON, and the A port is connected to the B port, allowing bidirectional data flow between ports. When  $\overline{OE}$  is high, the associated 8-bit bus switch is OFF, and a high-impedance state exists between the A and B ports.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry prevents damaging current backflow through the device when it is powered down. The device has isolation during power off.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to V<sub>CC</sub> through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

|                   |   | DL package           |      | 63   |      |
| T <sub>stg</sub>  | Storage temperature range                     |                      | -65  | 150  | °C   |

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltages are with respect to ground unless otherwise specified.

(3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(4)  $V_I$  and  $V_O$  are used to denote specific conditions for  $V_{I/O}$ .

(5)  $I_{I}$  and  $I_{O}$  are used to denote specific conditions for  $I_{I/O}$ .

(6) The package thermal impedance is calculated in accordance with JESD 51-7.

### **Recommended Operating Conditions**<sup>(1)</sup>

|                  |  |  | MIN | MAX | UNIT |
|------------------|--|--|-----|-----|------|
| V <sub>CC</sub>  | Supply voltage                                   |  | 2.3 | 3.6 | V    |
| V                | V <sub>IH</sub> High-level control input voltage | $V_{CC}$ = 2.3 V to 2.7 V                  | 1.7 | 5.5 | V    |
| VIН              | High-level control linput voltage                | $V_{CC}$ = 2.7 V to 3.6 V                  | 2   | 5.5 | v    |
| V                |  | $V_{CC}$ = 2.3 V to 2.7 V                  | 0   | 0.7 | N/   |
| VIL              | Low-level control input voltage                  | $V_{CC} = 2.7 \text{ V to } 3.6 \text{ V}$ | 0   | 0.8 | v    |
| V <sub>I/O</sub> | Data input/output voltage                        |  | 0   | 5.5 | V    |
| T <sub>A</sub>   | Operating free-air temperature                   |  | -40 | 85  | °C   |

 All unused control inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

(1)

 $V_{IN}$  and  $I_{IN}$  refer to control inputs.  $V_{I},\,V_{O},\,I_{I}$ , and  $I_{O}$  refer to data pins. All typical values are at  $V_{CC}$  = 3.3 V (unless otherwise noted),  $T_{A}$  = 25°C. For I/O ports, the parameter  $I_{OZ}$  includes the input leakage current. (2)

(3)

This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V<sub>CC</sub> or GND. (4)

This parameter specifies the dynamic power-supply current associated with the operating frequency of a single control input (see (5) Figure 2).

Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is (6) determined by the lower of the voltages of the two (A or B) terminals.

### **Switching Characteristics**

NOTES: A.  $C_{L}$  includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz, Z<sub>Q</sub> = 50  $\Omega$ , t<sub>r</sub>  $\leq$  2.5 ns, t<sub>f</sub>  $\leq$  2.5 ns.
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- G. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd(s)</sub>. The tpd propagation delay is the calculated RC time constant of the typical ON-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).
- H. All parameters and waveforms are not applicable to all devices.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

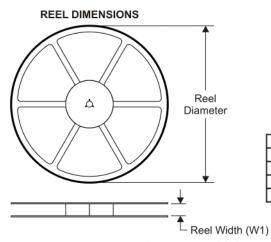

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
