# Specification

1.25G Ethernet Optical Bypass Module

Quad Ports 1.25G Base-SX

O B M – B 3 B H 2 – E 0 1

Features

➢ **Reliable Passive Fiber Bypass (Latching)**
➢ **Low Return Loss**
➢ **Available in 50/125μm Multimode Fiber**
➢ **PCB Mountable Type**
➢ **Fast Ethernet Standard Compliant**
➢ **Digital Diagnostic SFF-8472 Rev.10.2 Compliant**
➢ **SONET/SDH Standard Compliant**
➢ **Two Dual LC Adapter**
➢ **1.25 G-BASE-SX are available**
➢ **Compliant with CE & FCC Standard**
➢ **Compact Format and ROHS Compliant**

Product Overview

Formerica's Dual Port 1.25 Gbit/s Optical Bypass Module(OBM) is a compact module that contains four 1.25 G Base-SX ports and can be integrated with I/O port controllers in a Network Interface Card (NIC). This module is targeted for maintaining network connectivity when power failure or system fails in an In-Line Network System.

Formerica's Dual Port 1.25 Gbit/s Optical Bypass Module supports Normal and Bypass modes, and can be configured to perform the Block mode. In Normal mode, two ports function independently. In Bypass mode, signal packets received from one port are loop-backed to the adjacent port. In Block mode, the module blocks the route.

Formerica's Dual Port 1.25 Gbit/s Optical Bypass Module can Bypass or Block its I/O ports upon a host system failure, power off, or by software request. Formerica's Dual Port 1.25 Gbits Optical Bypass Module can be integrated with any brand's Controllers CPU. It is suitable for connecting with in-line equipment for power failure or system maintenance.

When the In-Line unit is not on or is in bypass mode, the relays within the OBM are set to bridge the optical signals directly through the optical switch, completely bypassing the In-Line equipment.
Formerica's OBM module provides excellent performance and reliable Optical Bypass and Block functions. All routing fibers, switches and electronics network are enclosed in a safe and compact housing which provides safe and space-saving to networking equipment.
Block Diagram and Optical Paths
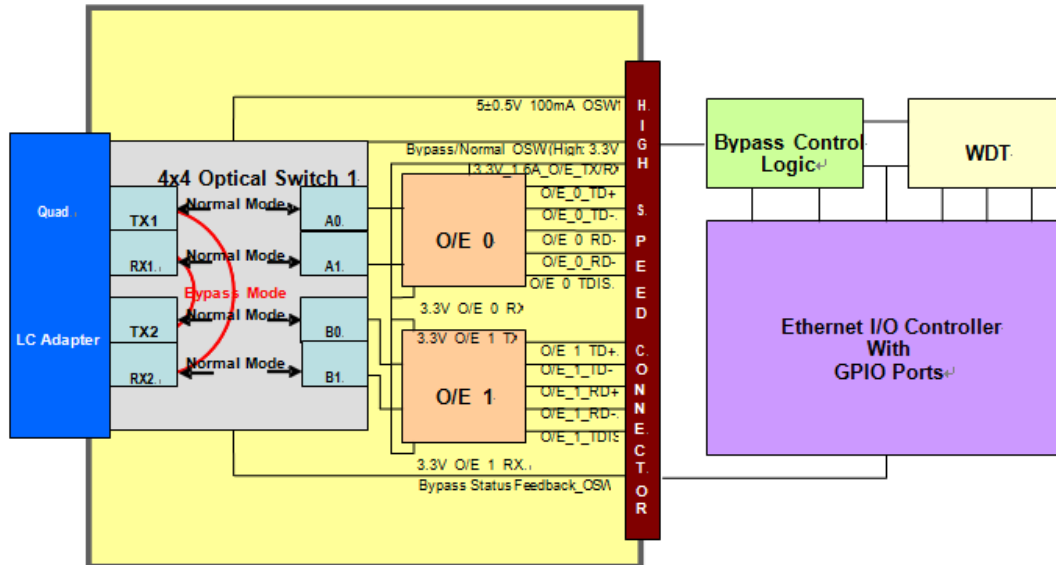

Dual Ports Optical Bypass Module

Notes:

1. TX Fault is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor on the host board. Pull up voltage between 2.0V and VccT, R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to < 0.5V.

2. TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7– 10 K Ω resistor. Its states are:
   - Low (0 – 0.8V): Transmitter on
   - (>0.8, < 2.0V): Undefined
   - High (2.0 – 3.465V): Transmitter Disabled
   - Open: Transmitter Disabled

3. Mod-Def 1,2, These are the module definition pins. They should be pulled up with a 4.7K – 10KΩ resistor on the host board. The pull-up voltage shall be VccT or VccR (see Section IV for further details). Mod-Def 0 is grounded by the module to indicate that the module is present Mod-Def 1 is the clock line of two wire serial interface for serial ID Mod-Def 2 is the data line of two wire serial interface for serial ID

4. LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7K – 10KΩ resistor. Pull up voltage between 2.0V and VccT, R+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.5V.

5. RD-/+: These are the differential receiver outputs. They are AC coupled 100Ω differential lines which should be terminated with 100Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 350 and 850 mV differential (175 – 425 mV single ended) when properly terminated.

6. TD-/+: These are the differential transmitter inputs. They are AC-coupled, differential lines with 100Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 180 – 700 mV (90 – 350 mV single-ended).

7. Latching Type - The input is used to control the optical switch mode for OSW

8. Normal mode: OSW N1/N2: > 3.75V and OSW B1/B2 < 0.5V and over 20ms.
   Bypass mode: OSW N1/N2: < 0.5V and OSW B1/B2 >3.75V and over 20ms
   Non-Latching Type - High =Normal Mode, Low=Bypass Mode for OSW.

9. Non-Latching Type - Pin 43, 44, 82 and 83: Ground

Absolute Maximum Ratings

Parameter	Symbol	Min.	Typ.	Max.	Unit
Storage Temperature	Ts	-40		85	℃
Supply Voltage	Vcc	0		5	V

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
Case Operating Temperature	Top	0		70	℃	1
+5.0V Supply Voltage	Vcc5	4.75		5.25	V	Vcc5
+3.3V Supply Voltage	Vcc3	3.10		3.50	V	
Relative Humidity (non-condensation)	RH	5		85	%	
Data Rate		-100ppm	1.25	+100ppm	Gbps

Electrical Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Note
+5.0V Supply Current	Icc5			100	mA	
+3.3V Supply Current	Icc3			1200	mA	
Transmitter						
Transmitter Differential Input Voltage	VDT	180		700	mV	1
Transmitter Disable Input-High	VDISH	2		Vcc+0.3	V	
Transmitter Disable Input-Low	VDISL	0		0.8	V	
Transmitter Fault Pull up Resistor	RTX FAULT	4.7		10	KΩ	2
Transmitter Fault Output-High	VTXFH	2.4		Vcc	V	2
Transmitter Fault Output-Low	VTXFL	0		0.5	V	2
Receiver						
Receiver Differential Output Voltage	VDR	350		850	mV	3
Receiver LOS Load	RRXLOS	4.7		10	KΩ	2
LOS Output Voltage-High	VLOSH	2.4		Vcc	V	2
LOS Output Voltage-Low	VLOSL	0		0.5	V	2
Optical Switch						
Latching Voltage-High	VLATH	4.75	5	5.25	V	
Latching Voltage-Low	VLATL	0		0.8	V	
Latching Resistance	RLAT		125		Ω	

Notes:

1. **Internally AC coupled and terminated to 100Ohm differential load**
2. **Pull up to Vcc on Host Board.**
3. **Internally AC coupled, but requies a 100Ohm differential termination at or internal to Serializer/Deserializer.**

Optical Characteristics (Top=0~70℃, Data Rate=1.25Gb/sec, PRBS=2^{31}-1 NRZ)

Parameter	Multimode Fiber Type	Min. Modal Bandwidth (MHz*km)	Operating Range (m)	Maximum Channel Intertion Loss (dB)
