### **Product Overview**

Mini-Circuits TRS2-32-75+ is a  $75\Omega$  surface mount balun transformer with a 1:2 secondary/primary impedance ratio covering the 1 to 300 MHz band. This model handles RF input power up to 0.25W and provides low insertion loss, good return loss, low amplitude unbalance, and low phase unbalance. Measuring only 0.2 x 0.2 x 0.15", the unit features core and wire, all-welded construction mounted on a six-lead printed wiring laminate base with wraparound terminations for excellent solderability. The unit also includes Mini-Circuits' Top Hat<sup>TM</sup> feature for faster more accurate pick-and-place assembly.

## **Key Features**

| Feature   | Advantages   |
|---|--|
| Wideband, 1 to 300 MHz,<br>Usable to 500 MHz                      | TRS2-32-75+ supports a variety of applications including CATV and DOCSIS® 3.1 upstream paths.                  |
| Low insertion loss, 0.5 dB  | Enables excellent signal power transmission from input to output.  |
| Good return loss, 25 dB typ.                                      | Excellent matching for 75 $\Omega$ systems with minimal signal reflection.                                     |
| Low unbalance  • 0.2 dB amplitude unbalance  • 2° phase unbalance | Low unbalance can improve a system's electromagnetic compatibility by rejecting unwanted common-mode noise.    |
| Small footprint, 0.2 x 0.2"                                       | Accommodates tight space requirements for dense PCB layouts.   |
| Top Hat <sup>®</sup> feature                                      | Improves speed and accuracy of pick and place assembly and provides clear device marking for visual inspection |
