

bread:bit breakout board for micro:bit

PPMB00112

The bread:bit makes it a breeze to connect your micro:bit to your breadboard.

Simply solder the provided male headers and seat it in the middle of your breadboard. Alternatively you can solder female headers (not included) should you wish.

This board comes pre-populated with an 80 way surface mount edge connector.

If you don't want to solder them yourself we have the option of doing it for you above.
