

Low Duty LCD Segment Driver for Automotive application

BU97601FV-M
MAX 116 Segments (29SEG x 4COM)

General Description

The BU97601FV-M is a 1/4, 1/3, 1/2 duty or Static general-purpose LCD driver that can be used for automotive applications and can drive up to 116 LCD Segments.

This product can support VA LCD displays, which has better optical performance with higher LCD voltage driving and higher frame frequency driving.

It can control up to 16 general-purpose outputs / 16 PWM output ports for LED backlighting and LED button illumination realizing less flicker by various frequency setting function.

It can also support a key scan function that detects a maximum of 20 key inputs to reduce PCB wiring and to minimize microcontroller size and cost.

It can support LCD contrast adjustment by its EVR function and TTL compatible input interface is also available, these are well-suited for wide-voltage range of MCUs.

Features

- AEC-Q100 Qualified (Note)
- 1/4, 1/3, 1/2 duty or Static Setting Selectable
1/4 duty: Max 116 Segments,
1/3 duty: Max 87 Segments
1/2 duty: Max 58 Segments,
Static: Max 29 Segments
- 1/3 or 1/2 Bias Setting Selectable
- Support wide range of operation voltage from 2.7 V to 6.0 V, which can support TN LCD and VA LCD display.
- Integrated LCD Voltage Driving Circuit
- Integrated Oscillation Circuit for LCD Frame Frequency
- Line or Frame Inversion Driving Selectable
- Max 16ch External PWM Outputs
(SEG outputs/general purpose outputs selectable)
- Max 6ch Internal PWM Outputs
(SEG outputs/general purpose outputs/external PWM outputs selectable)
- Support 256 Step PWM Function to Realize Backlight Button LED Illumination
- Support LCD Frame Frequency from 50 Hz to 685 Hz, Total 128-setting
- Support PWM Frequency from 146 Hz to 2.34 kHz, Total 16-setting
- Support 3 Wire Serial Interface + KEYOUT
- Support TTL Level Input to Connect 3.3 V MCU Directly
- Support Max 20 Keys Input Detection
(SEG selectable)
- Integrated EVR Function to Adjust LCD Contrast
- Integrated Voltage Detected Type Power on Reset Circuit
- No External Components Required
- Low Power Consumption Design

(Note) Grade 3

Key Specifications

- Supply Voltage Range: +2.7 V to +6.0 V
- Operating Temperature Range: -40 °C to +85 °C
- Max Segments: 116 Segments
- Display Duty: Static, 1/2, 1/3, 1/4 Selectable
- Bias: 1/2, 1/3 Selectable
- Interface: 3wire Serial Interface

Special Characteristics

- Electrostatic Discharge Voltage(HBM): ±2000 V
- Latch-up Current: ±100 mA

Applications

- Instrument Clusters
- Climate Controls
- Car Audios
- Car Radios
- Metering
- White Goods
- Healthcare Products
- Battery Operated Products
etc.

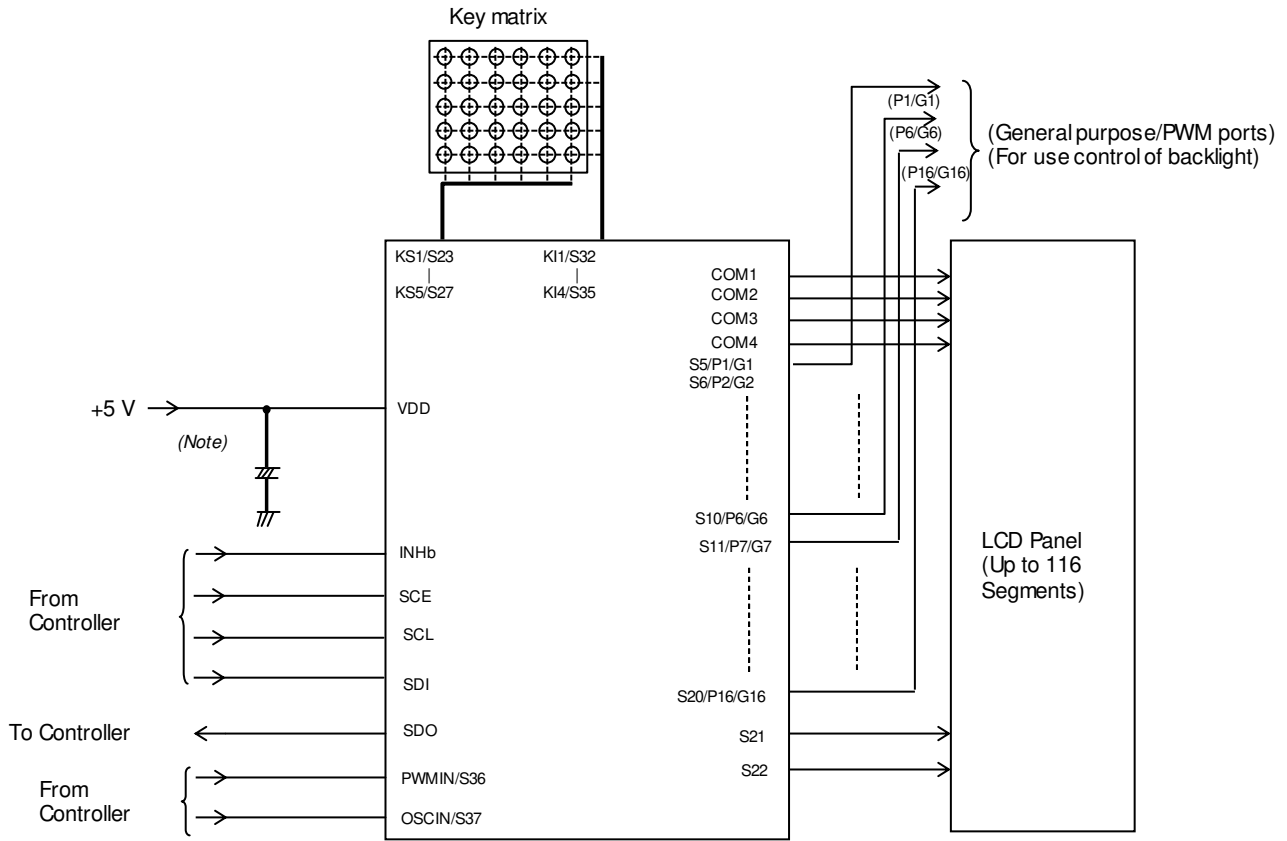

Package

W (Typ) x D (Typ) x H (Max)

○Product structure : Silicon monolithic integrated circuit ○This product is not designed protection against radioactive rays.

Typical Application Circuit

(Note) Insert capacitors between VDD and VSS $C > 0.1 \mu\text{F}$.

Pin Arrangement

Figure 3. Pin Configuration (TOP VIEW)

Absolute Maximum Ratings(VSS = 0.0 V)

Parameter	Symbol	Conditions	Ratings	Unit
Maximum Supply Voltage	VDD	VDD	-0.3 to +7.0	V
Input Voltage	V _{IN1}	SCE, SCL, SDI, INHb, PWMIN ^(Note 1) , OSCIN ^(Note 2)	-0.3 to +7.0	V
	V _{IN2}	KI1 to KI4 ^(Note 3)	-0.3 to +7.0	V
Allowable Loss	Pd		0.70 ^(Note 4)	W
Operating Temperature	Topr		-40 to +85	°C
Storage Temperature	Tstg		-55 to +125	°C

(Note 1) In case of External PWM setting.

(Note 2) In case of External clock mode setting.

(Note 3) In case of Key scan setting

(Note 4) Delete by 7.00 mW/°C when operating above Ta = 25 °C (when mounted in ROHM's standard board).

Caution: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

Recommended Operating Conditions (Ta = -40 °C to +85 °C, VSS = 0.0 V)

Parameter	Symbol	Conditions	Ratings			Unit
			Min	Typ	Max	
Supply Voltage	VDD		2.7	5.0	6.0	V

Electrical Characteristics (Ta = -40 to +85 °C, VDD = 2.7 V to 6.0 V, VSS = 0.0 V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Hysteresis	V _{H1}	SCE, SCL, SDI, INHb, PWMIN ^(Note 1) , OSCIN ^(Note 2)		-	0.03VDD D	-	V
	V _{H2}	KI1 to KI4 ^(Note 3)		-	0.1VDD	-	V

MPU Interface Characteristics (Ta = -40 °C to +85 °C, VDD = 2.7 V to 6.0 V, VSS = 0.0 V)

Parameter	Symbol	Pin	Conditions	Limit			Unit
				Min	Typ	Max	
Data Setup Time	t _{DS}	SCL, SDI		120	-	-	ns
Data Hold Time	t _{DH}	SCL, SDI		120	-	-	ns
SCE Wait Time	t _{CP}	SCE, SCL		120	-	-	ns
SCE Setup Time	t _{CS}	SCE, SCL		120	-	-	ns
SCE Hold Time	t _{CH}	SCE, SCL		120	-	-	ns
Clock Cycle Time	t _{CCYC}	SCL		320	-	-	ns
High-level Clock Pulse Width	t _{CHW}	SCL		120	-	-	ns
Low-level Clock Pulse Width (Write)	t _{CLWW}	SCL		120	-	-	ns
Low-level Clock Pulse Width (Read)	t _{CLWR}	SCL	R _{PU} = 4.7 kΩ C _L = 10 pF (Note)	1.6	-	-	μs
Rise Time	t _r	SCE, SCL, SDI,		-	160	-	ns
Fall Time	t _f	SCE, SCL, SDI,		-	160	-	ns
INH Switching Time	t _c	INHb, SCE		10	-	-	μs
SDO Output Delay Time	t _{DC}	SDO	R _{PU} = 4.7 kΩ C _L = 10 pF (Note)	-	-	1.5	μs
SDO Rise Time	t _{DR}	SDO	R _{PU} = 4.7 kΩ C _L = 10 pF (Note)	-	-	1.5	μs

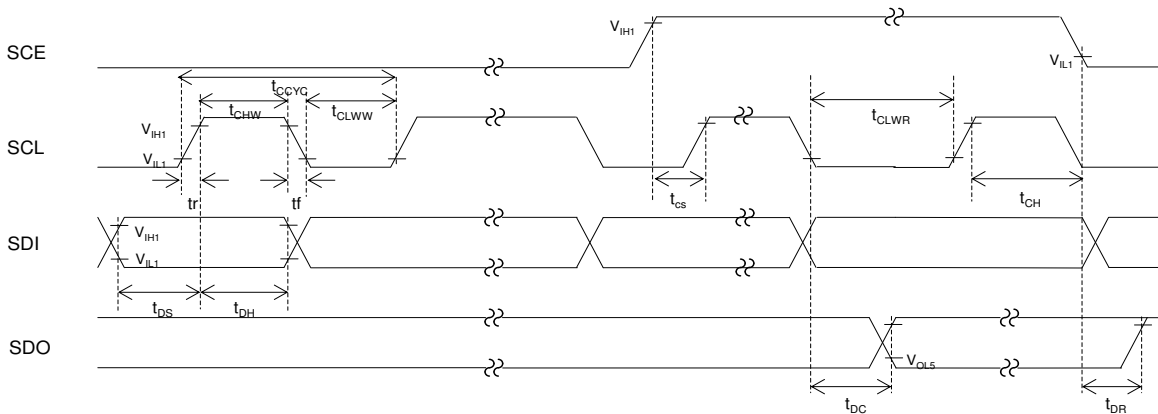

(Note) Since SDO is an open-drain output, "t_{DC}" and "t_{DR}" depend on the resistance of the pull-up resistor R_{PU} and the load capacitance C_L.

R_{PU}: 1 kΩ ≤ R_{PU} ≤ 10 kΩ is recommended.

C_L: A parasitic capacitance to VSS in an application circuit. Any component is not necessary to be attached.

Pin Description

Symbol	Pin No.	Function	Active	I/O	Handling when unused
S5/P1/G1 to S10/P6/G6	1 to 2 37 to 40	Segment output for displaying the display data transferred by serial data input. The S5/P1/G1 to S10/P6/G6 pins can also be used as General –purpose / PWM outputs when set by the control data.	-	O	OPEN
S11/P7/G7 to S20/P16/G16	3 to 12	Segment output for displaying the display data transferred by serial data input. The S11/P7/G7 to S20/P16/G16 pins can also be used as General –purpose outputs / PWM outputs (by External PWM only) when set by the control data.	-	O	OPEN
S21 to S22	13 to 14	Segment output for displaying the display data transferred by serial data input.	-	O	OPEN
KS1/S23 to KS5/S27	15 to 19	Key scan outputs. Although normal key scan timing lines require diodes to be inserted in the timing lines to prevent shorts, since these outputs are unbalanced CMOS transistor outputs, these outputs will not be damaged by shorting when these outputs are used to form a key matrix. The KS1/S23 to KS5/S27 pins can be used as segment outputs when specified by the control data.	-	O	OPEN
KI1/S32 to KI4/S35	20 to 23	Key scan inputs. These pins have built-in pull-down resistors. The KI1/S32 to KI4/S35 pins can be used as segment outputs when specified by the control data.	-	I O	VSS OPEN
COM1 to COM4	24 to 27	Common driver output pins. The frame frequency is fo[Hz].	-	O	OPEN
PWMIN/S36	30	Segment output for displaying the display data transferred by serial data input. The pin PWMIN/S36 can be used external PWM input pin or segment output when set by the control data.	-	I O	VSS OPEN
OSCIN/S37	31	Segment output for displaying the display data transferred by serial data input. The pin OSCIN/S37 can be used as external frequency input pin or segment output when set by the control data.	-	I O	VSS OPEN
SCE SCL SDI	32 33 34	Serial data transfer inputs. Must be connected to the controller. SCE: Chip enable SCL: Synchronization clock SDI: Transfer data	H ↑ -	I I I	VSS
SDO	35	Output data	-	O	OPEN
INHb ^(Note)	36	Display off control input. When INHb = low (VSS), Display forced off S5/P1/G1 to S10/P6/G6 = low (VSS) S11/P7/G7 to S20/P16/G16 = low (VSS) S21 to S22 = low (VSS) KS1/S23 to KS5/S27 = low (VSS) KI1/S32 to KI4/S35 = low (VSS) PWMIN/S36 = low (VSS) OSCIN/S37 = low (VSS) COM1 to COM4 = low (VSS) Stop the LCD drive bias voltage generation divider resistors. Stop the internal oscillation circuit. When INHb = high (VDD), Display on However, serial data transfer is possible when the display is forced off.	L	I	VDD
VDD	28	Power supply pin of the IC A power voltage of 2.7 V to 6.0 V must be applied to this pin.	-	-	-
VSS	29	Power supply pin. Must be connected to ground.	-	-	-

(Note) Regarding the details of INHb terminal and the control of each output, refer to "INHb Pin and Display Control".

(Note 3) P_x/G_x : PWM output or General Purpose output (x = 1 to 16)

PWM is selected by P_{Gx}(x = 1 to 6) control data bit

Internal PWM or external PWM output or General Purpose output is selected by EP_x(x = 1 to 6).

External PWM / General Purpose output is selected by EP_x(x = 7 to 16).

Control Data Functions – continued

When the General Purpose Output Port Function is selected, the correspondence between the output pins and the respective display data is given in the table below.

Output Pins	Corresponding Display Data			
	1/4 Duty mode	1/3 Duty mode	1/2 Duty mode	Static mode
S5/P1/G1	D17	D13	D9	D5
S6/P2/G2	D21	D16	D11	D6
S7/P3/G3	D25	D19	D13	D7
S8/P4/G4	D29	D22	D15	D8
S9/P5/G5	D33	D25	D17	D9
S10/P6/G6	D37	D28	D19	D10
S11/P7/G7	D41	D31	D21	D11
S12/P8/G8	D45	D34	D23	D12
S13/P9/G9	D49	D37	D25	D13
S14/P10/G10	D53	D40	D27	D14
S15/P11/G11	D57	D43	D29	D15
S16/P12/G12	D61	D46	D31	D16
S17/P13/G13	D65	D49	D33	D17
S18/P14/G14	D69	D52	D35	D18
S19/P15/G15	D73	D55	D37	D19
S20/P16/G16	D77	D58	D39	D20

When the General Purpose Output Port Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to "1". Likewise, it will output a "LOW" level, if its corresponding display data is set to "0". For example, at 1/4 Duty mode, S8/P4/G4 is used as a General Purpose Output Port, if its corresponding display data D29 is set to "1", then S8/P4/G4 will output "HIGH" level. Likewise, if D29 is set to "0", then S8/P4/G4 will output "LOW" level.

Control Data Functions – continued

3. FL: Line Inversion or Frame Inversion switching control data

This control data bit selects either line inversion mode or frame inversion mode.

FL	Inversion mode	Reset condition
0	Line Inversion	○
1	Frame Inversion	-

Typically, when driving large capacitance LCD, Line inversion will increase the influence of crosstalk. Regarding driving waveform, refer to [LCD Driving Waveforms](#).

4. DR: 1/3 bias drive or 1/2 bias drive switching control data

This control data bit selects either 1/3 bias drive or 1/2 bias drive.

DR	Bias drive scheme	Reset condition
0	1/3 bias drive	○
1	1/2 bias drive	-

The settings take effect if except Static are already set by DT0 and DT1 control bits.

5. DT: 1/4 duty drive, 1/3 duty drive, 1/2 duty drive or Static drive switching control data

These control data bits select either 1/4 duty drive, 1/3 duty drive, 1/2 duty drive or Static drive

DT0	DT1	Duty drive scheme	Reset condition
0	0	Static drive	-
0	1	1/2 duty drive	-
1	0	1/3 duty drive	-
1	1	1/4 duty drive	○

6. FC0, FC1, FC2, FC3, FC4, FC5, and FC6: Common/Segment output waveform frame frequency switching control data

These control data bits set the frame frequency for common and segment output waveforms.

(Note) fosc: Internal oscillation frequency (600 kHz Typ)

Control Data Functions – continued

7. OC: Internal oscillator operating mode/External clock operating mode switching control data in OSCIN/S37
 These control data bits select either Internal oscillator operating or External clock operating mode.

OC	Operating mode	In/Out pin(OSCIN/S37) status	Reset condition
0	Internal oscillator	S37 (segment output)	○
1	External Clock	OSCIN (clock input)	-

OC = 1: the OSCIN/S37 pin can be used as input clock pin when External Clock is set by the control data.

<External Clock input timing function>

Internal oscillation/external clock select signal behavior is below.
 Please input external clock after serial data sending.

8. SC: Segment on/off switching control data
 This control data bit controls the on/off state of the segments.

SC	Display state	Reset condition
0	On	-
1	Off	○

Note that when the segments are turned off by setting SC to “1”, the segments are turned off by outputting segment off waveforms from the segment output pins.

9. BU0, BU1 and BU2: Normal mode/power-saving mode switching control data
 These control data bits select either normal mode or power-saving mode.

BU0	BU1	BU2	Mode	OSC Oscillator	Segment outputs Common outputs	Output Pin States During Key Scan Standby					Reset condition	
						KS1	KS2	KS3	KS4	KS5		
0	0	0	Normal	Operating	Operating	H	H	H	H	H	-	
0	0	1				L	L	L	L	H	H	-
0	1	0	Power-saving	Stopped	Low(VSS)	L	L	L	H	H	-	
0	1	1				L	L	H	H	H	H	-
1	0	0				L	H	H	H	H	H	-
1	0	1				H	H	H	H	H	H	-
1	1	0				H	H	H	H	H	H	-
1	1	1				H	H	H	H	H	○	

Power-saving mode status: S5/P1/G1 to S20/P16/G16 = active only General Purpose output

- S21 to S22 = low (VSS)
- KS1/S23 to KS5/S27 = low (VSS)
- KI1/S32 to KS4/S35 = low (VSS)
- PWMIN/S36 = low (VSS)
- OSCIN/S37 = low (VSS)
- COM1 to COM4 = low (VSS)
- Stop the LCD drive bias voltage generation circuit
- Stop the Internal oscillation circuit
- However, serial data transfer is possible when at Power-saving mode.

Regarding the details of INHb pin and the control of each output, refer to “[INHb Pin and Display Control](#)”.

Control Data Functions – continued

10. PG1, PG2, PG3, PG4, PG5 and PG6 : PWM/General Purpose output switching control data
 This control data bit selects either PWM output or General Purpose output of Px/Gx pins. (x = 1 to 6)

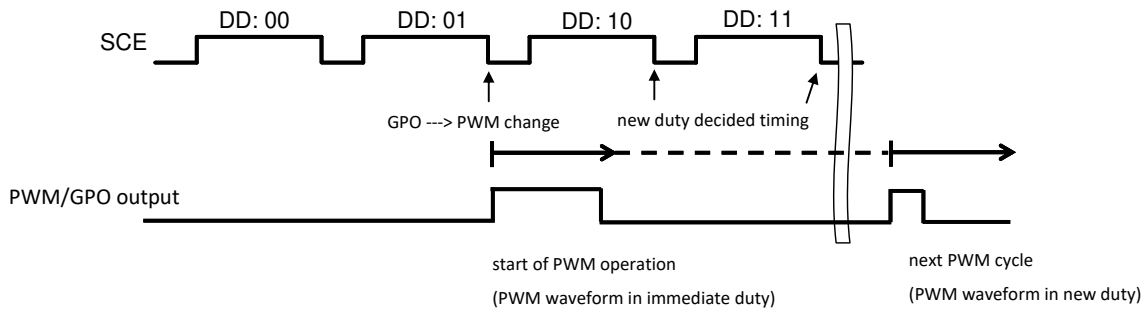

PGx(x = 1 to 6)	Px/Gx(x = 1 to 6) pin status	Reset condition
0	PWM output	○
1	General Purpose output	-

The Px/Gx pin settings take effect only if PWM / General Purpose Output are already set by P0 to P4 control bits.

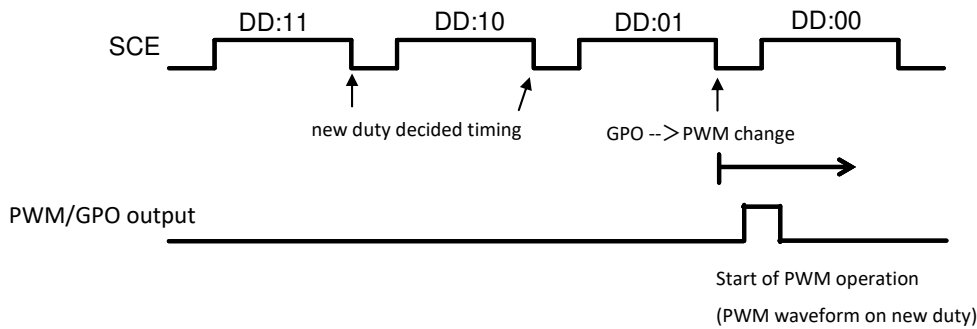

<PWM->GPO Changing function>

Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD: 01 during GPO → PWM change.
- Please take care of reflect timing of new duty setting of DD: 10 and DD: 11 is from the next PWM.

In order to avoid this operation, please input commands in reverse as below.

Control Data Functions – continued

11. PF0, PF1, PF2, and PF3: PWM output waveform frame frequency switching control data

These control data bits set the frame frequency for PWM output waveforms of Px/Gx pins. (x = 1 to 6).

PF0	PF1	PF2	PF3	PWM output Frame Frequency fp(Hz)	Reset condition
0	0	0	0	f _{osc} /4096	○
0	0	0	1	f _{osc} /3840	-
0	0	1	0	f _{osc} /3584	-
0	0	1	1	f _{osc} /3328	-
0	1	0	0	f _{osc} /3072	-
0	1	0	1	f _{osc} /2816	-
0	1	1	0	f _{osc} /2560	-
0	1	1	1	f _{osc} /2304	-
1	0	0	0	f _{osc} /2048	-
1	0	0	1	f _{osc} /1792	-
1	0	1	0	f _{osc} /1536	-
1	0	1	1	f _{osc} /1280	-
1	1	0	0	f _{osc} /1024	-
1	1	0	1	f _{osc} /768	-
1	1	1	0	f _{osc} /512	-
1	1	1	1	f _{osc} /256	-

The following can output PWM output waveforms when selected.

P0 to P4: PWM / General Purpose output is selected.

PG1 to PG6: PWM output is selected.

EP1 to EP6: Internal PWM is selected.

12. CT0, CT1, CT2 and CT3: LCD display contrast switching control data

These control data bits set display contrast

CT0	CT1	CT2	CT3	LCD Drive bias voltage for VLCD Level	Reset condition
0	0	0	0	1.000*VDD	○
0	0	0	1	0.975*VDD	-
0	0	1	0	0.950*VDD	-
0	0	1	1	0.925*VDD	-
0	1	0	0	0.900*VDD	-
0	1	0	1	0.875*VDD	-
0	1	1	0	0.850*VDD	-
0	1	1	1	0.825*VDD	-
1	0	0	0	0.800*VDD	-
1	0	0	1	0.775*VDD	-
1	0	1	0	0.750*VDD	-
1	0	1	1	0.725*VDD	-
1	1	0	0	0.700*VDD	-
1	1	0	1	0.675*VDD	-
1	1	1	0	0.650*VDD	-
1	1	1	1	0.625*VDD	-

These control data bits set VLCD voltage level (the max level voltage of LCD driving voltage).

Avoid setting VLCD voltage under 2.5 V.

And ensure "VDD – VLCD > 0.6 V" condition is satisfied.

Unstable IC output voltage may result if the above conditions are not satisfied.

Control Data Functions – continued

The relationship of LCD display contrast setting and VLCD voltage

Control Data Functions – continued

13. EP1, EP2, EP3, EP4, EP5, EP7, EP8, EP9, EP10, EP11, EP12, EP13, EP14, EP15 and EP16 :

Internal PWM/External PWM switching control data (EP1-EP6),

GPO/External PWM switching control data (EP7-EP16)

This control data bit select either External PWM output or internal generation PWM output of Px/Gx pins(x = 1 to 6).

EPx(x = 1 to 6)	Px/Gx(x = 1 to 6) pin status	Reset condition
0	Internal PWM	○
1	External PWM	-

The following can output PWM output waveforms when selected:

P0 to P4: PWM/General Purpose output is selected.

PG1 to PG6: PWM output is selected.

This control data bit select either GPO or external PWM output of Px/Gx pins(x = 7 to 16).

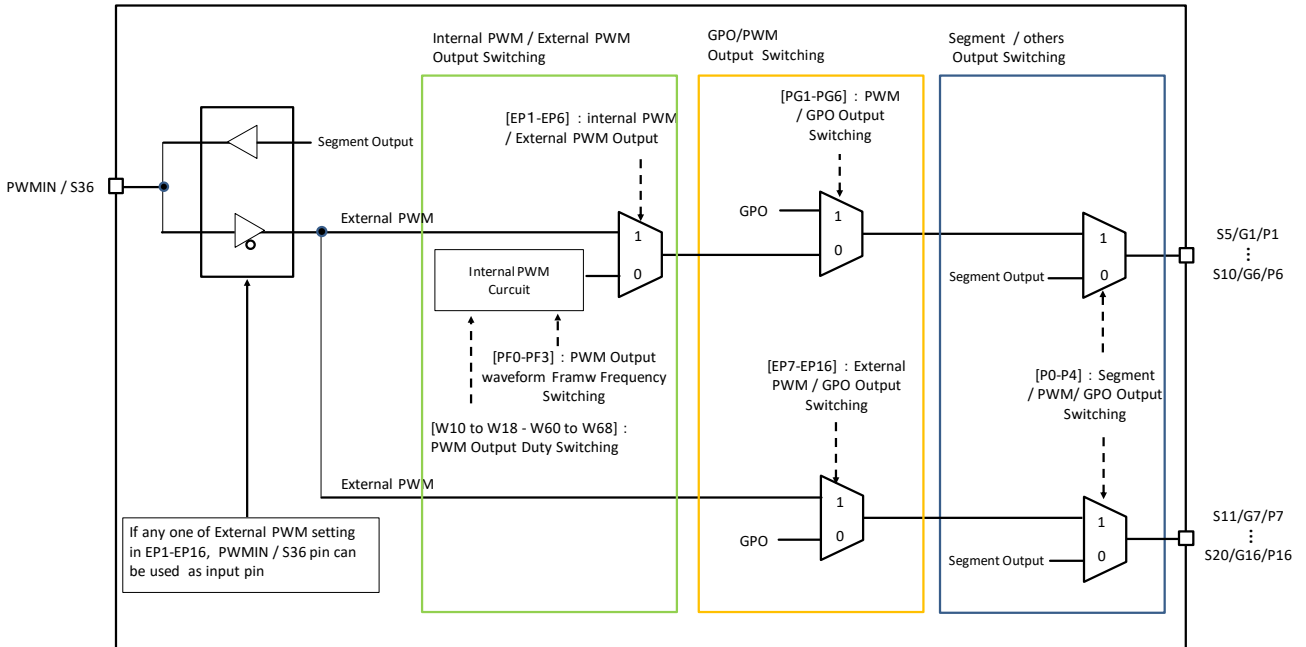

EPx(x = 7 to 16)	Px/Gx(x = 7 to 16) pin status	Reset condition
0	GPO	○
1	External PWM output	-

The following can output PWM output waveforms when selected:

P0 to P4: PWM/General Purpose output is selected.

If any one of external PWM setting in EP1-EP16, PwMIN/S36 pin can be as input pin.

The relation of P0 to P4, Px/Gx(x = 1 to 6), EP1 to EP16 is as follows

P0 to P4	PGx (x = 1 to 6)	EPx (x = 1 to 6)	EPx (x = 7 to 16)	Pin status			Reset condition
				Px/Gx (x = 1 to 6)	Px/Gx(x = 7 to 16)	PwMIN / S36	
Sx ^(Note 1)	0	0	0	Segment Output	Segment Output	Segment Output	○
Sx ^(Note 1)	0	0	1	Segment Output	Segment Output	PwMIN ^(Note 3)	-

Serial Data Output

1. When SCL is stopped at the low level^(Note 1)

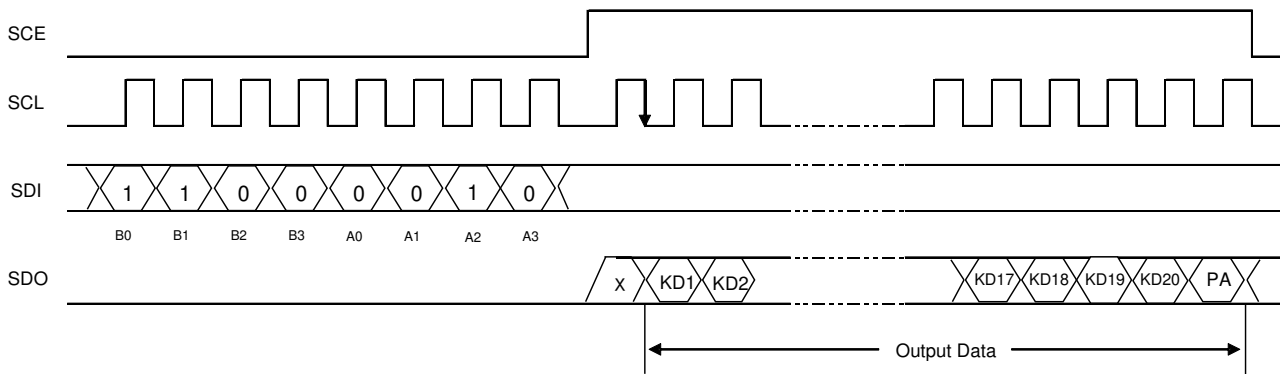

Figure 15. Serial Data Output Format

(Note 1)

- 1. X = Don't care
- 2. B0 to B3, A0 to A3: Serial Interface address

2. When SCL is stopped at the high level^(Note 2)

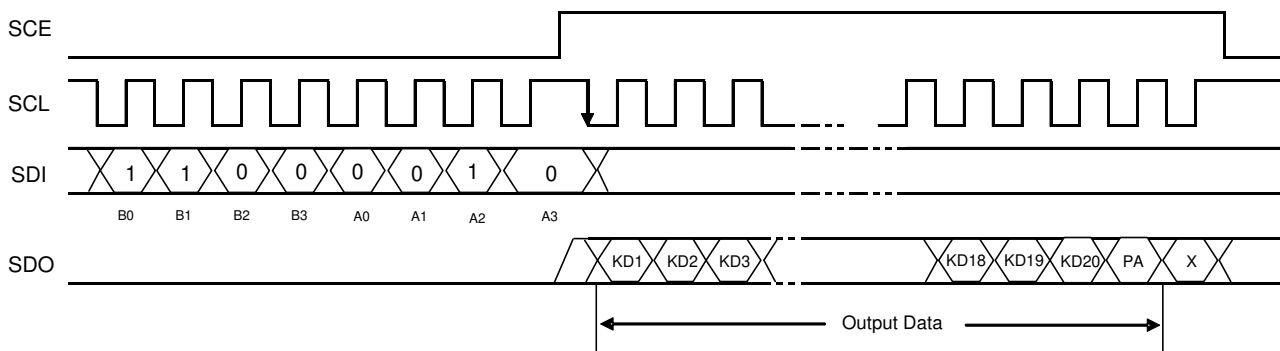

Figure 16. Serial Data Output Format

(Note 2)

- 1. X = Don't care
- 2. B0 to B3, A0 to A3: Serial Interface address
- 3. Serial Interface address: 43H
- 4. KD1 to KD20: Key data
- 5. PA: Power-saving acknowledge data
- 6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD20) and power-saving acknowledge data (PA) will be invalid.

Output Data

1.KD1 to KD20: Key Data

When a key matrix of up to 20 keys is formed from the KS1 to KS5 output pins and the KI1 to KI4 input pins and one of those keys is pressed, the key output data corresponding to that key will be set to 1. The table shows the relationship between those pins and the key data bits.

Item	KI1	KI2	KI3	KI4
KS1	KD1	KD2	KD3	KD4
KS2	KD5	KD6	KD7	KD8
KS3	KD9	KD10	KD11	KD12
KS4	KD13	KD14	KD15	KD16
KS5	KD17	KD18	KD19	KD20

2.PA: Power-saving Acknowledge Data

This output data is set to the state when the key is pressed. In that case SDO will go to the low level. If serial data is input during this period and the mode is set (normal mode or power-saving mode), the IC will be set to that mode. PA is set to 1 in the power-saving mode and to 0 in the normal mode.

Power-saving Mode

Power-saving mode is activated when least one of control data BU0 or BU1 or BU2 is set to 1. All segment and common outputs will go low. The oscillation circuit will stop (It can be restarted by a key press), thus reducing power consumption. This mode can be disabled when control data bits BU0, BU1 and BU2 are all set to 0. However, note that the S5/P1/G1 to S20/P16/G16 outputs can still be used as general-purpose output ports according to the state of the P0 to P4 control data bits, even in power-saving mode. (See [Control Data Functions](#))

Key Scan Operation Function

1. Key scan timing

The key scan period is 4640T(s). To reliably determine the on/off state of the keys, the BU97601FV-M scans the keys twice and determines that a key has been pressed when the key data agrees. It outputs a key data read request (a low level on SDO) 9904T(s) after starting a key scan. If the key data does not agree and a key was pressed at that point, it scans the keys again. Thus the BU97601FV-M cannot detect a key press shorter than 9904T(s).

Figure 17. Key Scan Timing^(Note)

(Note) In power-saving mode the high/low state of these pins is determined by the BU0 to BU2 bits in the control data. Key scan output signals are not output from pins that are set "L".

2. In Normal Mode

The pins KS1 to KS5 are set "H".

When a key is pressed a key scan is started and the keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9904T(s) (Where $T = 1/f_{osc}$) the BU97601FV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set "H".

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97601FV-M performs another key scan. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 kΩ and 10 kΩ)

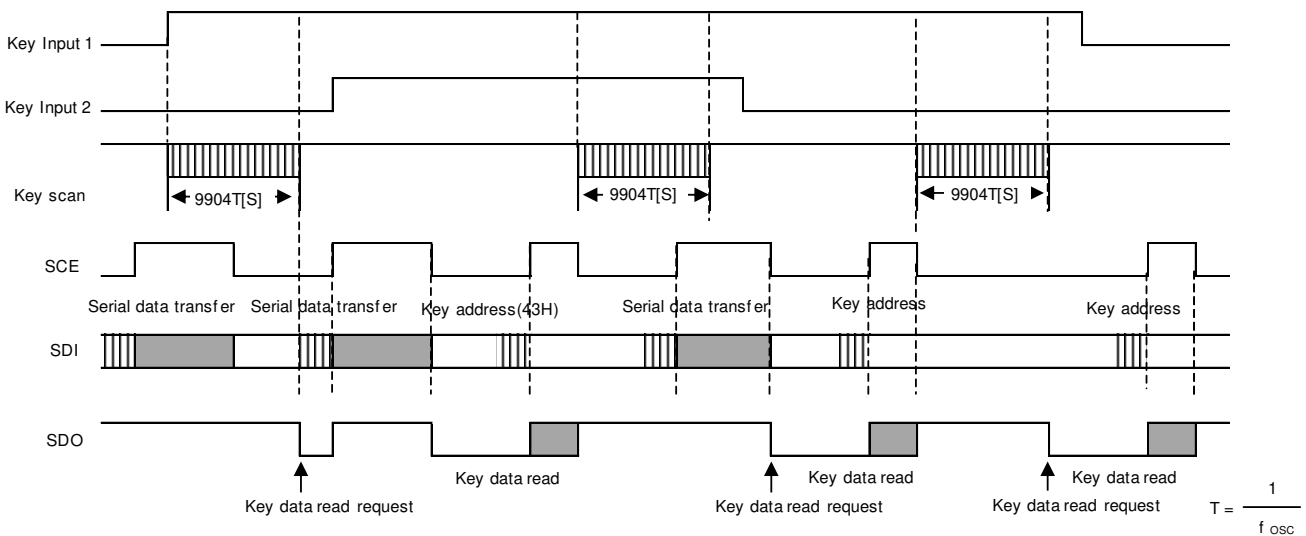

Figure 18. Key Scan Operation in Normal Mode

Key Scan Operation Function – continued

3. In Power-saving mode

The pins KS1 to KS5 are set to high or low by the BU0 to BU2 bits in the control data. (See the control data description for details.)

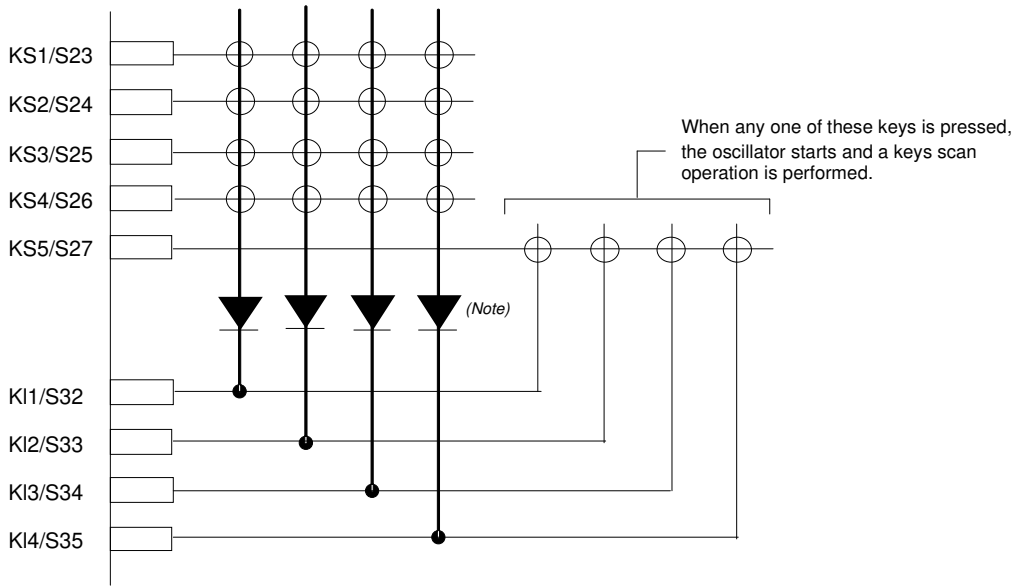

If a key on one of the lines corresponding to a KS1 to KS5 pin which is set high is pressed, the oscillator on the OSC pin is started and a key scan is performed. Keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than $9904T(s)$ (Where $T = 1/f_{osc}$) the BU97601FV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU97601FV-M performs another key scan. However, this does not clear power-saving mode. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 kΩ and 10 kΩ).

Power-saving mode key scan example

Example: BU0 = 0, BU1 = 0, BU2 = 1 (only KS5 high level output)

(Note) These diodes are required to reliably recognize multiple key presses on the KS5 line when only KS5 is high, as in the above example. That is, these diodes prevent incorrect operations due to sneak currents in the KS5 key scan output signal when keys on the KS1 to KS5 lines are pressed at the same time.

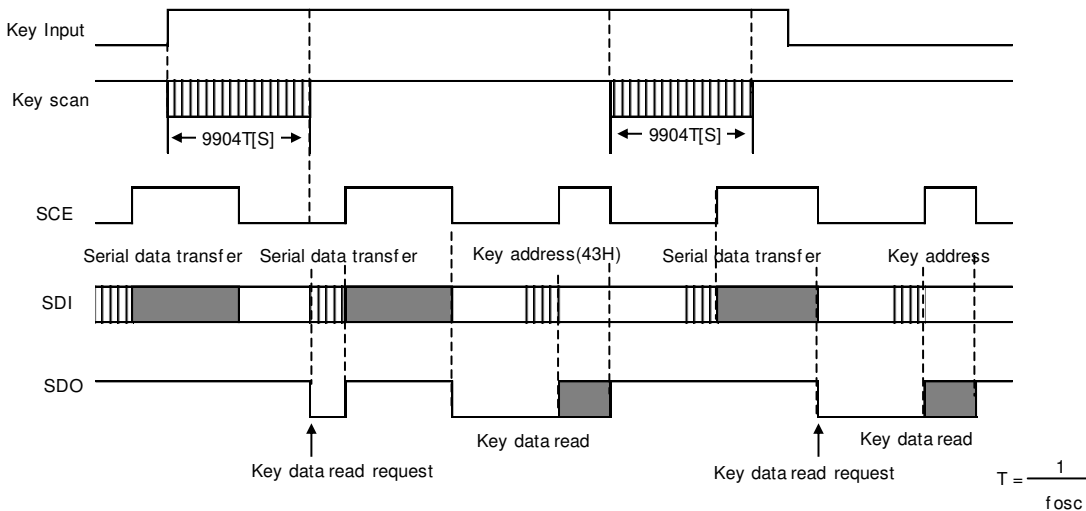

Figure 19. Key Scan Operation in Power-saving Mode

Multiple Key Presses

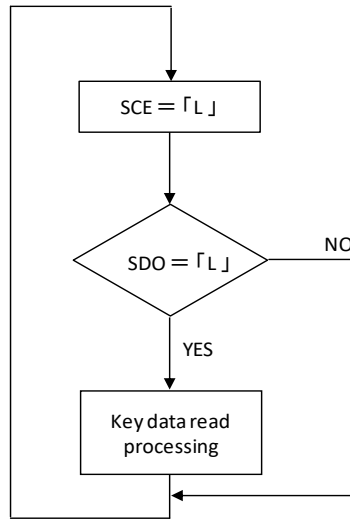

Although the BU97601FV-M is capable of key scanning without inserting diodes for dual key presses, triple key presses on the KI1 to KI4 input pin lines or multiple key presses on the KS1 to KS5 output pin lines, multiple presses other than these cases may result in keys that were not pressed recognized as having been pressed. Therefore, a diode must be inserted in series with each key. Applications that do not recognize multiple key presses of three or more keys should check the key data for three or more 1 bit and ignore such data.

Controller Key Data Read Technique

When the controller receives a key data read request from BU97601FV-M, it performs a key data read acquisition operation using either the Timer Based Key Data Acquisition or the Interrupt Based Key Data Acquisition.

Timer Based Key Data Acquisition Technique

Under the Timer Based Key Data Acquisition Technique, the controller uses a timer to determine the states of the keys (ON or OFF) and read the key data. Please refer to the flowchart below.

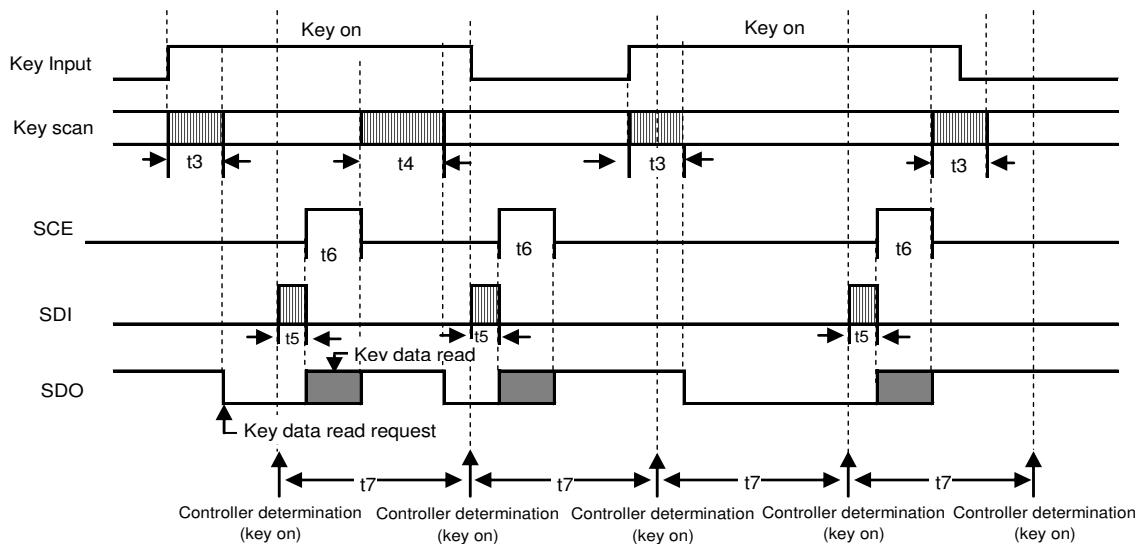

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 20. Flowchart

In this technique, the controller uses a timer to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low every t7 period without fail. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation.

The period t7 in this technique must satisfy the following condition.
 $t7 > t4 + t5 + t6$

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD20) and power-saving acknowledge data (PA) will be invalid.

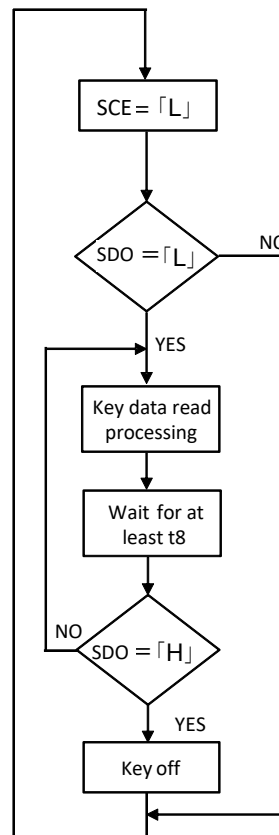

- t3: Key scan execution time when the key data agreed for two key scans. (9904T(s))
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19808T(s)) $T = 1/f_{osc}$
- t5: Key address (43H) transfer time
- t6: Key data read time

Figure 21. Timer Based Key Data Read Operation

Controller Key Data Read Technique – continued**Interrupt Based Key Data Acquisition Technique**

Under the Interrupt Based Key Data Acquisition Technique, the controller uses interrupts to determine the state of the keys (ON or OFF) and read the key data. Please refer to the flow chart diagram below.

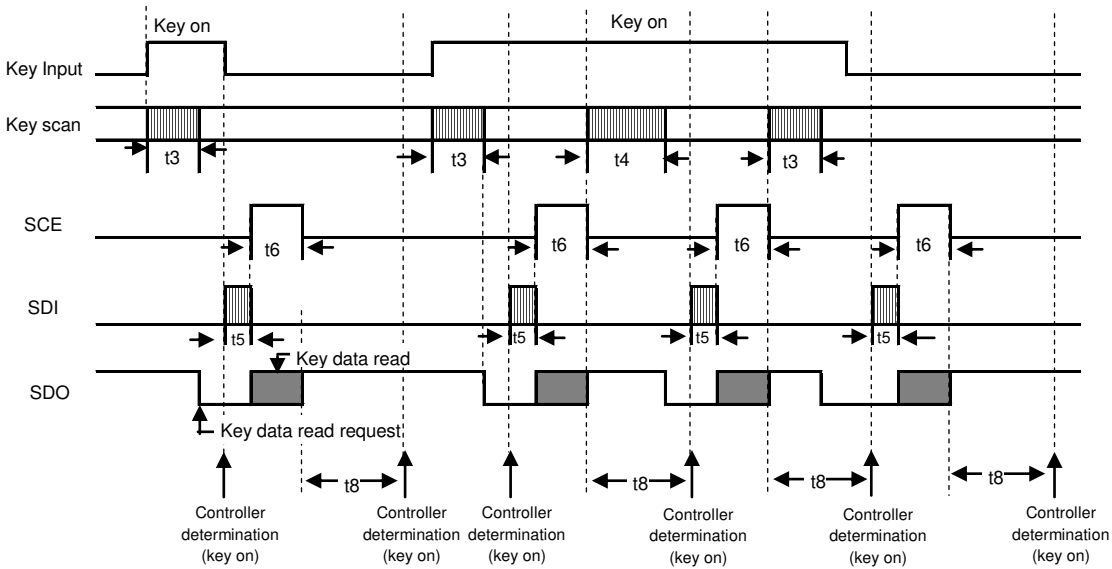

Key data read processing: Refer to [“Serial Data Output”](#)

Figure 22. Flowchart

Controller Key Data Read Technique – continued

In this technique, the controller uses interrupts to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation. After that the next key on/off determination is performed after the time t_8 has elapsed by checking the SDO state when SCE is low and reading the key data. The period t_8 in this technique must satisfy $t_8 > t_4$.

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD20) and power-saving acknowledge data (PA) will be invalid.

- t_3 : Key scan execution time when the key data agreed for two key scans. (9904T(s))
- t_4 : Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19808T(s)) $T = 1/f_{osc}$
- t_5 : Key address (43H) transfer time
- t_6 : Key data read time

INHb Pin and Display Control

The INHb pin operates Display off of LCD.
INHb control depends on set pin function.

Below table shows terminal function and control by INHb pin.

Pin Function	Control	
	INHb = L	INHb = H
SEG/COM	Display forced off	Display on
PWM/GPO	Operation Stop	Operation Available
Key Scan	Available regardless of INHb	
External Clock Input External PWM Input	Available regardless of INHb	

Below table shows pin name and pin state of INHb = L.

Each output state are decided by Control data(P0 to P4, KM0 to KM2, OC, EPx(x = 1 to 16), PGx(x = 1 to 6))

For the details, please refer to "[Control Data Functions](#)".

Pin Name	Pin Function ^(Note) (In case of INHb = L)						
	SEG	COM	PWM	GPO	Keyscan	External Clock Input	External PWM Input
S5/P1/G1 to S20/P16/G16	Stop (VSS)	-	Stop (VSS)	Stop (VSS)	-	-	-
S1 to S4, S21 to S22, S28 to S31	Stop (VSS)	-	-	-	-	-	-
KS1/S23 to KS5/S27	Stop (VSS)	-	-	-	Keyscan Output operation	-	-
KI1/S32 to KI4/S35	Stop (VSS)	-	-	-	Keyscan Input operation	-	-
PWMIN/S36	Stop (VSS)	-	-	-	-	-	PWM Input operation
OSCIN/S37	Stop (VSS)	-	-	-	-	Clock Input operation	-
COM1 to COM4	-	Stop (VSS)	-	-	-	-	-

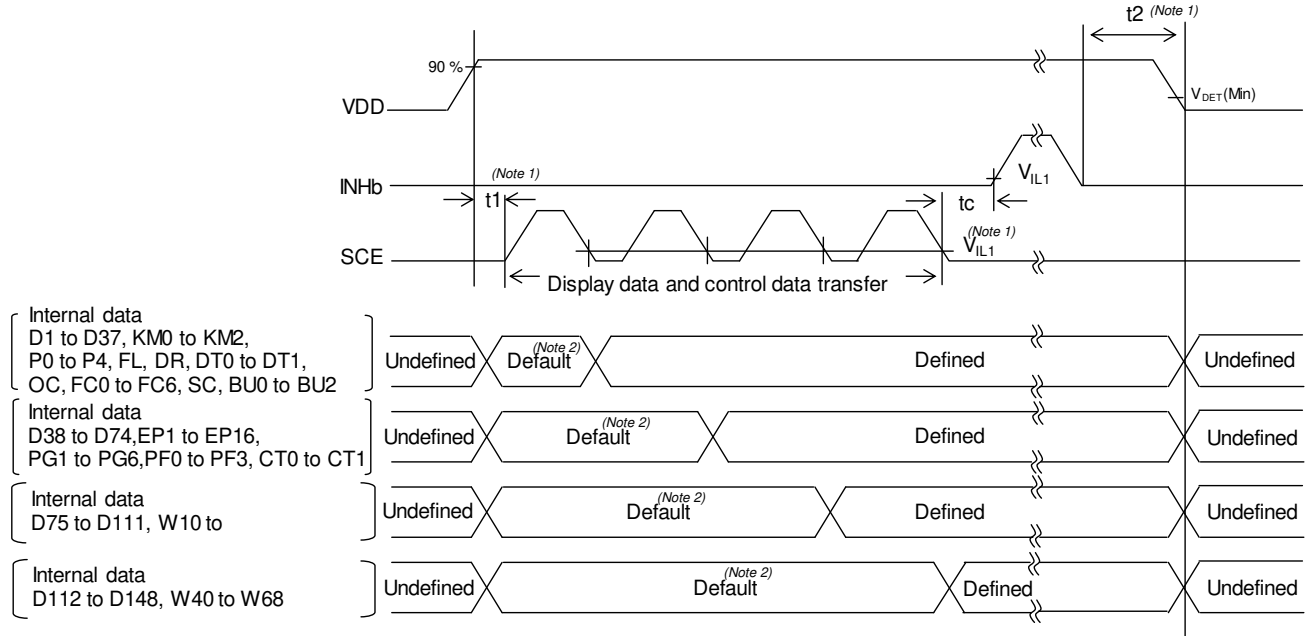

(Note) "-" means the terminal does not have the function

For example, S5/P1/G1 to S20/P16/G16 are not set COM, Keyscan, External Clock Input and External PWM Input

INHb Pin and Display Control – continued

Since the IC internal data (1/4-Duty: the display data D1 to D148 and the control data, 1/3-Duty: the display data D1 to D111 and the control data, 1/2-Duty: the display data D1 to D74 and the control data, Static: the display data D1 to D37 and the control data) is undefined when power is first applied, applications should set the INHb pin low at the same time as power is applied to turn off the display (This sets the S5 to S27, S32 to S37, COM1 to COM4 to the VSS level.) and during this period send serial data from the controller. The controller should then set the INHb pin high after the data transfer has completed. This procedure prevents meaningless displays at power on.

1. 1/4-Duty

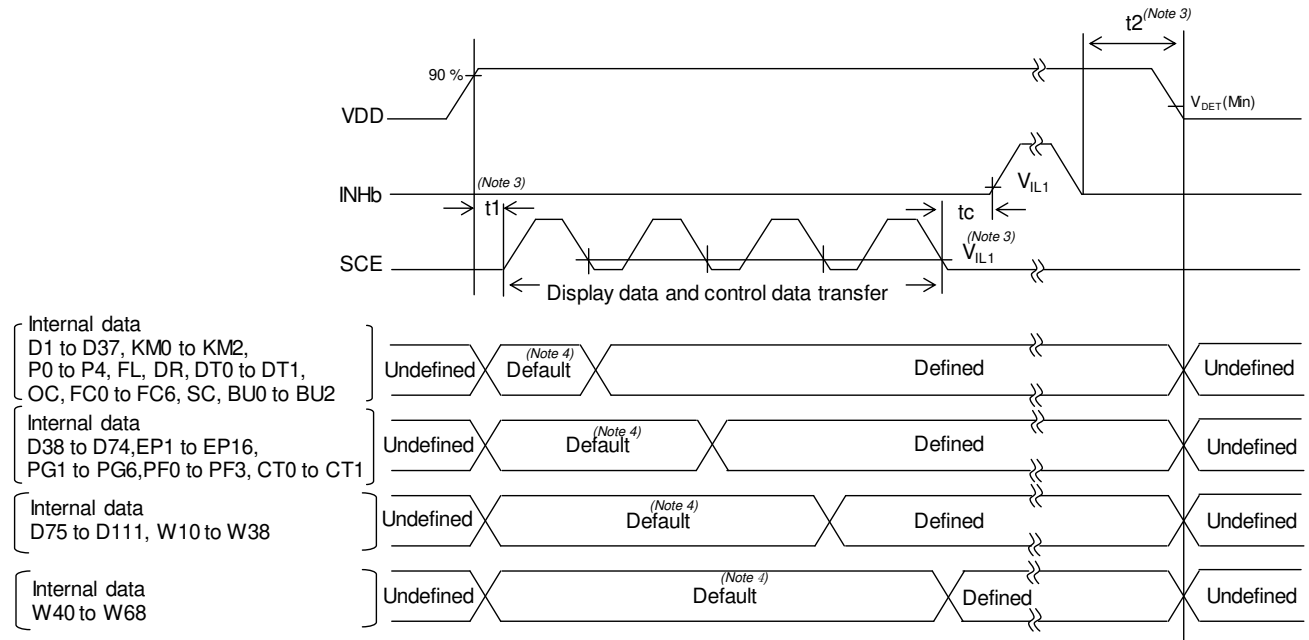

(Note 1) $t1 \geq 0$, $t2 \geq 0$, t_c : 10 μs (Min)

When VDD level is over 90 %, there may be cases where command is not received correctly in unstable VDD.

(Note 2) Display data are undefined. Regarding default value, refer to [Reset Condition](#).

4. Static

(Note 3) $t1 \geq 0$, $t2 \geq 0$, $tc: 10 \mu s(\text{Min})$

When VDD level is over 90 %, there may be cases where command is not received correctly in unstable VDD.

(Note 4) Display data are undefined. Regarding default value, refer to [Reset Condition](#).

Figure 41. Power ON/OFF and INHb Control Sequence (Static)

Oscillation Stabilization Time

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of 100 μs (oscillation stabilization time) after oscillation has started.

Figure 42. Oscillation Stabilization Time

Power-saving mode operation in external clock mode

After receiving [BU0,BU1,BU2] = [1,1,1], BU97601FV-M enters to power saving mode synchronized with frame then Segment and Common ports output VSS level.

Therefore, in external clock mode, it is necessary to input the external clock based on each frame frequency setting after sending [BU0,BU1,BU2] = [1,1,1].

For the required number of clock, refer to [“6. FC0, FC1, FC2, FC3, FC4, FC5, and FC6: Common/Segment output waveform frame frequency switching control data”](#).

For example, please input the external clock as below.

[FC0, FC1, FC2, FC3, FC4, FC5, FC6] = [0,0,0,0,0,0,0]: In case of $f_{osc}/12000$ setting, it needs over 12000 clk,

[FC0, FC1, FC2, FC3, FC4, FC5, FC6] = [0,1,0,1,0,1,0]: In case of $f_{osc}/2308$ setting, it needs over 2308 clk,

[FC0, FC1, FC2, FC3, FC4, FC5, FC6] = [1,1,1,1,1,1,1]: In case of $f_{osc}/876$ setting, it needs over 876 clk

Please refer to the timing chart below.

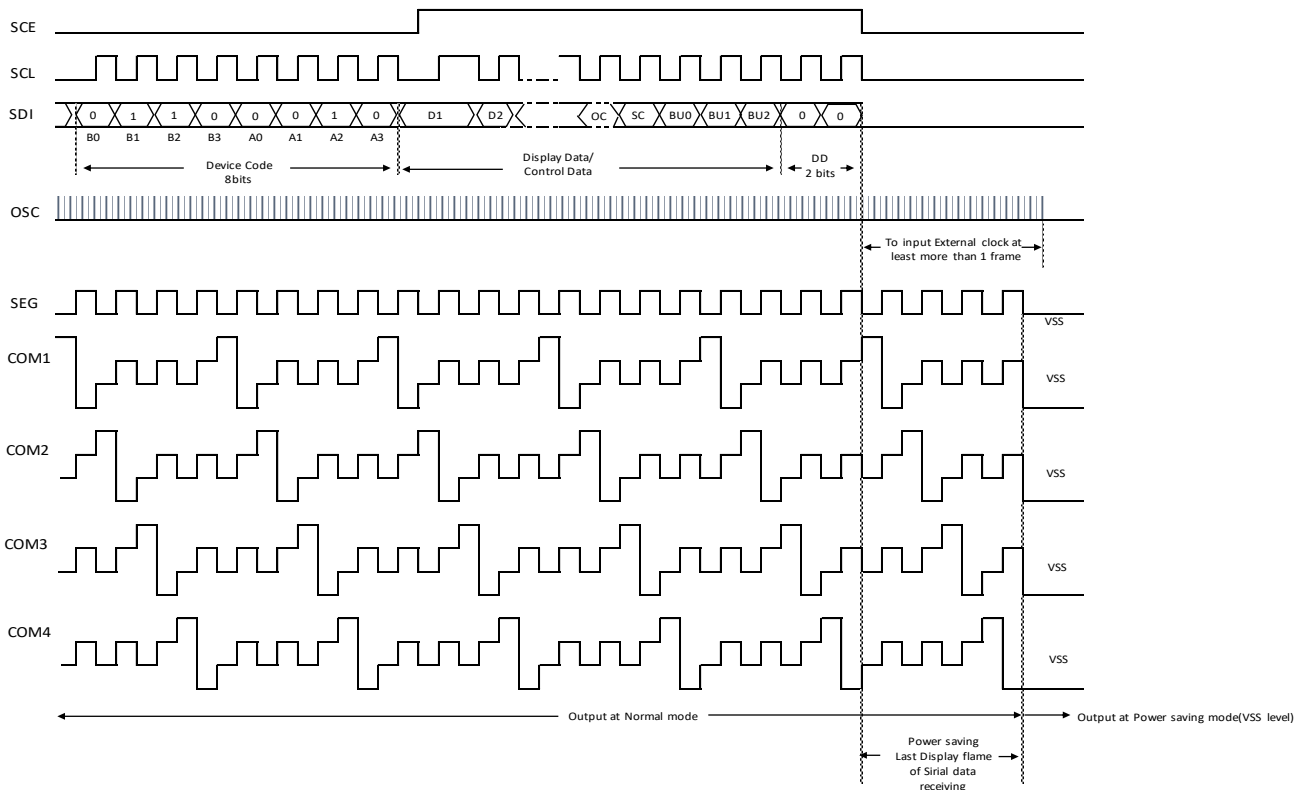

Figure 43. External Stop Timing(1/4-Duty)

Voltage Detection Type Reset Circuit (VDET)

The Voltage Detection Type Reset Circuit generates an output signal that resets the system when power is applied for the first time and when the power supply voltage drops (that is, for example, the power supply voltage is less than or equal to the power down detection voltage (VDET = 1.8 V Typ). To ensure that this reset function works properly, it is recommended that a capacitor be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1 ms.

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception.

Figure 44. VDET Detection Timing

Power supply voltage VDD fall time: $t_1 > 1 \text{ ms}$
 Power supply voltage VDD rise time: $t_2 > 1 \text{ ms}$
 Internal reset power supply retain time: $t_3 > 1 \text{ ms}$

When it is difficult to keep above conditions, it is possibility to cause meaningless display due to no IC initialization. Please execute the IC initialization as quickly as possible after Power-on to reduce such an affect. See the IC initialization flow as below.

But since commands are not received when the power is OFF, the IC initialization flow is not the same function as POR.

Set [BU0,BU1,BU2] = [1,1,1](power-saving mode) and SC = 1(Display Off) as quickly as possible after Power-on. BU97601FV-M can receive commands in 0ns after Power-on(VDD level is 90 %). Please refer to the timing chart of "[INHb Pin and Display Control](#)".

Reset Condition

When BU97601FV-M is initialized, the internal status after power supply has been reset as the following table.

Instruction	At Reset Condition
Key Scan mode	[KM0,KM1,KM2] = [1,1,1]:Keyscan no use
S5/P1/G1 to S20/P16/G16 pin	[P0,P1,P2,P3,P4] = [0,0,0,0,0]:all segment output
Inversion mode	FL = 0:Line Inversion
LCD bias	DR = 0:1/3 bias
LCD duty	[DT0,DT1] = [1,1]:1/4 duty
DISPLAY frequency	[FC0,FC1,FC2,FC3,FC4,FC5,FC6] = [0,0,0,0,0,0,0]: $f_{osc}/12000$
Display clock mode	OC = 0:Internal oscillator
LCD display	SC = 1:OFF
Power mode	[BU0, BU1, BU2] = [1,1,1]:Power saving mode
PWM/GPO output	PGx = 0:PWM output(x = 1 to 6)
External PWM	[EP1,EP2,EP3,EP4,EP5,EP6,EP7,EP8,EP9,EP10,EP11,EP12,EP13,EP14,EP16] = [0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0]: External PWM OFF
PWM frequency	[PF0,PF1,PF2,PF3] = [0,0,0,0]: $f_{osc}/4096$
PWM duty	[Wn0 to Wn8] = [0,0,0,0,0,0,0,0,0]: $(0/256) \times T_p$ (n = 1 to 6, $T_p = 1/f_p$)
Display Contrast setting	[CT0,CT1,CT2,CT3] = [0,0,0,0]:VLCD Level is $1.00 \times VDD$

Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

5. Thermal Consideration

Should by any chance the power dissipation rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. The absolute maximum rating of the Pd stated in this specification is when the IC is mounted on a 70mm x 70mm x 1.6mm glass epoxy board. In case of exceeding this absolute maximum rating, increase the board size and copper area to prevent exceeding the Pd rating.

6. Recommended Operating Conditions

These conditions represent a range within which the expected characteristics of the IC can be approximately obtained. The electrical characteristics are guaranteed under the conditions of each parameter.

7. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

8. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

9. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

10. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

Operational Notes – continued**11. Unused Input Pins**

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

12. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

Ordering Information

B U 9 7 6 0 1 F V - ME 2

Part Number	Package FV : SSOP-B40	Product Rank M: for Automotive Packaging Specification E2: Embossed tape and reel (SSOP-B40)
-------------	--------------------------	--

Marking Diagram

Physical Dimension, Tape and Reel Information

Package Name	SSOP-B40
--------------	----------

(UNIT ; mm)
 PKG : SSOP-B40
 Drawing No. EX157-5001

<Tape and Reel information>

Tape	Embossed carrier tape
Quantity	2000pcs
Direction of feed	E2 (The direction is the 1pin of product is at the upper left when you hold reel on the left hand and you pull out the tape on the right hand)

*Order quantity needs to be multiple of the minimum quantity.

Version / Revision History

Version	date	description
001	13. Sep. 2016	New Release
002	01. Oct. 2019	Page.4 Delete temperature condition in Absolute Maximum Rating Page.6 Modify Figure Name. Page.8 Add Pin Description Note Page.11,13,15,17and 23 Add Description Page.27 Correction of errors of Pin stats table. Page.54 Add INHb Pin and Display Control description Page.58 Add Voltage Detection Type Reset Circuit (VDET) additional explanation. Page.60 Delete 13. Data transmission in Operational Notes (Move to Voltage Detection Type Reset Circuit (VDET)) Minor correction to have more conformity between Japanese and English version.
003	05. Jan. 2021	Page.26 Modify The relationship of LCD display contrast setting and VLCD voltage.

Notice

Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ^(Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - [a] Installation of protection circuits or other protective devices to improve system safety
 - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
 - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - [f] Sealing or coating our Products with resin or other coating materials
 - [g] Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - [h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
