Disclaimer and Revisions

***Note:** This product has been designed to comply with the limits for a Class B digital device pursuant to Part 15 of FCC and EN55022 Rules when properly enclosed and grounded. These limits are designed to provide reasonable protection against radio interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with this guide, may cause interference to radio communications. Changes or modifications to this device not explicitly approved by Lantronix will void the user's authority to operate this device. The information in this guide may change without notice. The manufacturer assumes no responsibility for any errors that may appear in this guide.*

1. Introduction

About this Guide

This guide provides the information needed to use the xPico with the Development Kit. The intended audience is the engineers responsible for integrating the xPico into their product.

Notes: Everything required to evaluate the CoBos OS-based turnkey application is provided in the development kit. See [Contents of the Kit](#).

Additional Documentation

Visit the Lantronix web site at www.lantronix.com/support/documentation for the latest documentation and the following additional documentation.

Document	Description
<i>xPico Development Kit Quick Start Guide</i>	Instructions for getting the xPico module up and running on the evaluation board.
<i>xPico Integration Guide</i>	Provides information for integrating the xPico module on a customer platform.
<i>xPico Product Brief</i>	Provides a quick reference to xPico technical specifications.
<i>xPico User Guide</i>	Provides information needed to configure, use, and build CoBos applications on the xPico.

2. Development Kit

Using an xPico sample and the xPico Development Kit, you can get familiar with the product and understand how to integrate the xPico into a given product design.

Contents of the Kit

The xPico Development Kit contains the following items:

- ◆ xPico Module
- ◆ xPico Evaluation Board
- ◆ 5V Wall Adaptor
- ◆ xPico Mounting Quick Clip
- ◆ RS-232 Cable, DB9F/F, Null Modem
- ◆ CAT5 Ethernet Cable
- ◆ 40-pin Connector Sample

Evaluation Board Description

The xPico evaluation board provides a test platform for the Lantronix xPico device server products. The evaluation board uses either 5V power from a USB device port connector or power supplied to the Ethernet connector via PoE. The Development Kit includes a 5V wall adapter with a USB plug to allow powering the evaluation board from a standard power strip. The evaluation board includes all necessary regulators to power the 3.3V xPico module. The evaluation board has the following features:

- ◆ Two DB9 serial port connectors with one driven by a multi-protocol RS232, RS422, RS485 transceiver at rates up to 1Mbps. The second DB9 is driven by an RS232 transceiver. Serial port modes are configured by on-board jumpers.
- ◆ One RJ45 10/100 Ethernet port with an integrated PoE regulator to allow powering from standard PoE PSE.
- ◆ One Mini-Type B USB device port connector for 5V input power. This port also has an integrated USB-to-serial converter. The USB-to-serial converter can be connected to the xPico serial port via a board jumper setting.
- ◆ LEDs for the xPico Ethernet and System status outputs along with two additional LEDs that can be driven via jumper wire.
- ◆ Access to all logic level IO signals on the xPico via header pins for measurements and connections to other places.

The figure below shows the xPico evaluation board and highlights all of the various connectors and configuration jumpers. The following table lists each of the connectors and jumper headers along with their function. Further description and pin assignments are included in subsequent sections.

Figure 2-1 xPico Evaluation Drawing

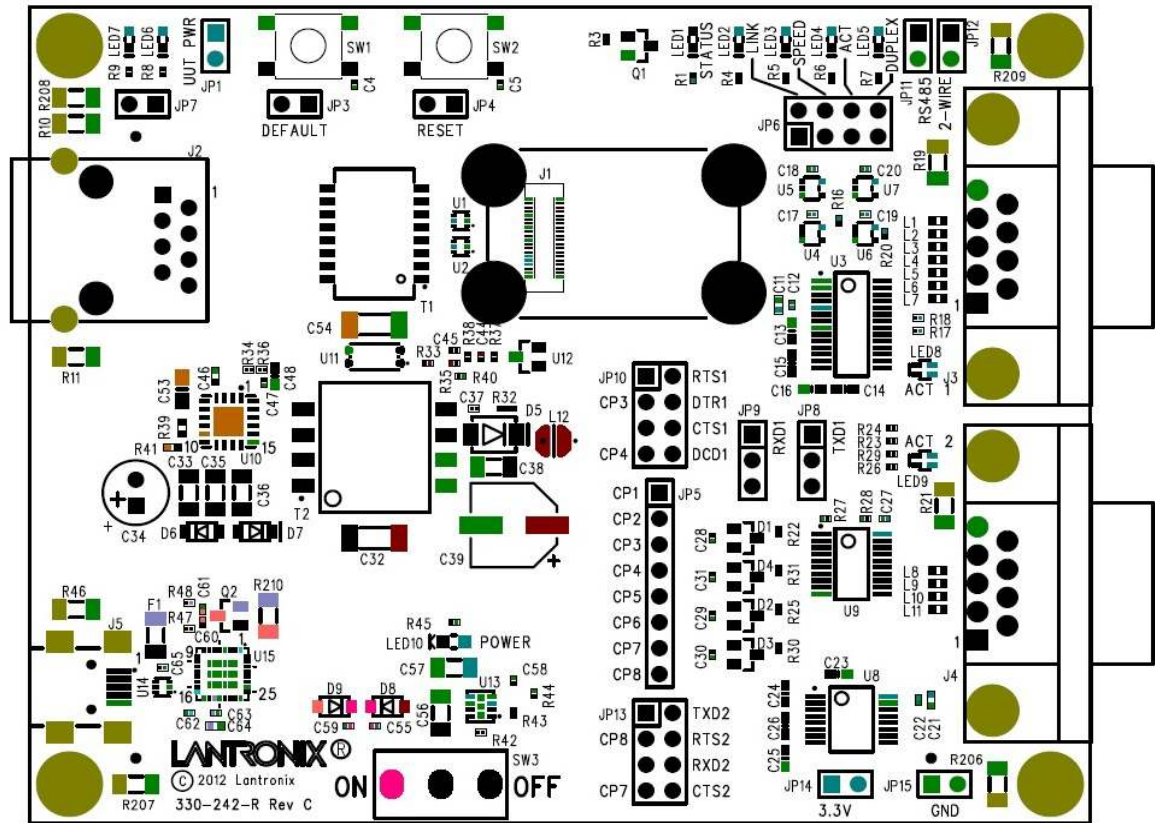

Table 2-1 Evaluation Board Connectors, Header and Switches

Ref Des.	Connector/Header Function
J1	xPico Module Socket 40 pin socket for xPico module
J2	RJ45 Connector 10/100Mbps Ethernet connector. PoE powered device port.
J3	Serial Port 1 DB9 Standard RS232/RS422/RS485 DB9 serial port connector.
J4	Serial Port 2 DB9 Standard RS232 DB9 serial port connector.
J5	Mini USB Connector Standard USB device port that can be used to power the evaluation board or drive the evaluation board USB-to-serial converter.
JP1	Module Power Jumper Power connection to the module
JP3	Default Button Jumper Allows access to module reset to default signal and SW1 push button. Install to use SW1 as reset to default button.
JP4	HW Reset Button Jumper Allows access to module HW reset signal and SW2 push button. Install to use SW2 as HW reset button.

Ref Des.	Connector/Header Function
JP5	Configurable Pin Header Provides access to xPico module configurable pins CP1 to CP8
JP6	Ethernet LED Header Allows access to Ethernet LED signals. Install to drive evaluation board Ethernet LEDs with module LED signals.
JP7	Spare LED Header Provides two additional LEDs. Jumper to desired active low signal to light LED6 and LED7
JP8	Serial Port 1 TX Source Header Install jumper to select between DB9 serial port or USB-to-serial.
JP9	Serial Port 1 RX Source Header Install jumper to select between DB9 serial port or USB-to-serial.
JP10	Serial Port 1 Breakout Header Install jumpers to connect xPico Serial Port 1 flow control signals to the RS232/RS422/RS485 transceiver for Serial Port 1.
JP11	Serial Port 1 RS232/RS422/RS485 Mode Jumper Leave open for RS232 mode. Install for RS422/RS485
JP12	Serial Port 1 RS422/RS485 Mode Jumper Leave open for RS232 or 4-wire mode. Install for 2-wire mode.
JP13	Serial Port 2 Breakout Header Install jumpers to connect xPico Serial Port 2 TX/RX and configurable pins to the RS232 transceiver for Serial Port 2.
JP14	3.3V Power Header Provides access to the internal 3.3V power rail.
JP15	Ground Header Provides access to the internal signal ground rail.
SW1	Module Reset to Default When pushed asserts the xPico module reset to default function.
SW2	Module Hardware Reset When pushed asserts the xPico module hardware reset to reboot the module.
SW3	Board Power Switch Switches ON or OFF the logic power rails.

Serial Port 1 and 2 RS232/RS485 Interfaces

The evaluation board has one multiprotocol RS-232/RS422/RS485 port and one RS232 port for connection to the xPico internal UARTs. The ports are DB9 type connectors labeled J3 and J4. Included with the kit is a DB9-to-DB9 null modem cable (Lantronix P/N 500-164-R). The null modem cable can be used to connect either J3 or J4 directly to a standard PC RS232 serial port.

The tables below list the RS232/RS422/RS485 signals and corresponding pins on the evaluation board DB9 connectors. All signals at J3 are level-shifted by a multiprotocol transceiver. J4 is an RS232 port only.

Table 2-2 RS-232 Signals on J3 and J4 Serial Ports

xPico Evaluation Board PIN FUNCTION	DB9 Pin #
Serial Port	
TX_232 (Data Out)	3
RX_232 (Data In)	2
CTS_232 (HW Flow Control Input)	8
RTS_232 (HW Flow Control Output)	7
DTR_232 (Modem Control Output)	4
GND (Ground)	5

Table 2-3 RS-422 4-Wire Signals on Serial Ports (J3 only)

xPico Evaluation Board PIN FUNCTION	DB9 Pin #
Serial Port	
TX- (Data Out)	3
RX+ (Data In)	2
TX+ (Data Out)	7
RX- (Data In)	4
GND (Ground)	5

Table 2-4 RS-485 2-Wire Signals on Serial Ports(J3 only)

xPico Evaluation Board PIN FUNCTION	DB9 Pin #
Serial Port	
TX-/RX- (Data IO)	3
TX+/RX+ (Data IO)	7
GND (Ground)	5

The J3 DB9 port is configured for RS232, RS422 (4-wire), or RS485 (2-wire) by jumper settings on JP11 and JP12. [Table 2-5](#) lists the correct jumper installation for each mode.

Table 2-5 JP11 and JP12 Jumper Settings for Serial Port 1 (J3)

xPico Evaluation Board Serial Port 1 Mode (J3)	JP11	JP12
RS232	OUT	OUT
RS485 2-wire	IN	IN
RS422 4-wire	IN	OUT

Figure 2-2 JP11 and JP12 Headers

All of the xPico module serial port signals can be used as configurable pins. Jumper headers JP10 and JP13 have been included to allow for each of the serial port signals to be connected or disconnected from the serial port transceiver. The tables below list the JP10 and JP13 serial port signal connections. Install jumper or remove as needed for desired function. In addition, the first serial port on the xPico module can be connected to either the DB9 serial port on J3 or to the USB on J5 via the on board USB-to-serial converter. Jumpers JP8 and JP9 allow for the selection of sending the J3 DB9 or J5 USB-to-Serial Port 1.

In order to access the unit through the J5 USB port, you will need to install the USB-to-serial VCP driver from FTDI on your PC. It is available in the installation directory of DeviceInstaller 4.3.0.2 and later versions, for installation. It can also be obtained from the FTDI website provided below. Once installed, you will be able to view the xPico boot messages as well as provide command inputs through any PC terminal program, such as Tera Term.

Download FTDI USB-to-serial drivers at this website:
<http://www.ftdichip.com/Drivers/VCP.htm>

Table 2-6 JP8 and JP9 Port 1 DB9 Serial or USB/Serial Selection Headers

Serial Port 1 External Connection	JP8	JP9
Serial Port 1 to J3 DB9 for RS232/RS422/RS485	Jumper pins 1 to 2	Jumper pins 1 to 2
Serial Port 1 to J5 USB via USB-to-serial converter	Jumper pins 2 to 3	Jumper pins 2 to 3

27	CP7, Serial port CTS2	7	8	RS232 CTS

Figure 2-4 JP13 Header

Ethernet Port

The xPico evaluation board includes one RJ45 with on-board magnetics for connection to the xPico module 10/100Mbps Ethernet interface. Connector J2 is the Ethernet port.

Power Supply

The evaluation board provides several options for input power. Included with the kit is a 5V wall adapter. The 5V wall adapter plugs into USB connector J5. In addition to powering from the wall adapter, the evaluation board can be powered from a standard PC USB Host port by connecting a USB cable between the PC and J5. The evaluation board can also be powered via Power-Over-Ethernet (PoE). The integrated PoE regulator accepts power from the Ethernet port on J2.

Table 2-9 Evaluation Board Power Options

Input Power Option	Description
5V Wall Cube	Connect 5V wall cube to J5 USB port. Note: USB-to-serial not available in this option.
USB Host Port	Connect J5 USB power to a PC USB Host Port. Note: Host port can communicate with serial port via on-board USB-to-serial converter. See Table 2-1 for JP8 and JP9 jumper pin selection.
PoE	Connect J2 Ethernet port to external PoE PSE switch or PoE injector

LEDs

The xPico evaluation board includes several LEDs for signal and unit status. The table below lists all of the LEDs and their function.

Table 2-10 LEDs Signals

J1 Pin	LED Ref Design	Color	LED Function
20	LED1	Orange	xPico Status LED blinks with patterns indicating module status. See the xPico user guide for a full description of the status LED blink patterns.
4	LED2	Orange	Ethernet Link LED is ON when the Ethernet port has a valid link
6	LED3	Orange	Ethernet Speed LED is ON when Ethernet is in 100Mbps mode
8	LED4	Orange	Ethernet Activity LED blinks when there is activity on the Ethernet port
14	LED5	Orange	Ethernet Duplex LED is ON when Ethernet is in half duplex mode
	LED6	Orange	Spare LED LED is ON when JP7 pin 1 is driven low
	LED7	Orange	Spare LED LED is ON when JP7 pin 2 is driven low.
10	LED8	Green	Serial Port 1 TX Activity LED is ON for activity on the Serial Port 1 transmit line
7	LED8	Orange	Serial Port 1 RX Activity LED is ON for activity on the Serial Port 1 receive line
25	LED9	Green	Serial Port 2 TX Activity LED is ON for activity on the Serial Port 2 transmit line
23	LED9	Orange	Serial Port 2 RX Activity LED is ON for activity on the Serial Port 2 receive line
	LED10	Blue	3.3V Power LED LED is ON when the evaluation board power supply is generating 3.3V

Additional Headers

The table below lists the pin functionality of the additional evaluation board headers.

Table 2-11 Additional Headers

J1 Pin	Header Pin	Signal	Function
36	JP3 pin 1	Module reset to defaults (active low)	Install jumper (JP3 pins 1 to 2) to use SW1 for asserting default function.
38	JP4 pin 1	Module hardware reset (active low)	Install jumper (JP4 pins 1 to 2) to use SW2 for asserting hardware reset.
35	JP5 pin 1	CP1, configurable pin	Test point
26	JP5 pin 2	CP2, configurable pin	Test point
28	JP5 pin 3	CP3, configurable pin	Test point
30	JP5 pin 4	CP4, configurable pin	Test point
32	JP5 pin 5	CP5, configurable pin	Test point
34	JP5 pin 6	CP6, configurable pin	Test point
27	JP5 pin 7	CP7, configurable pin	Test point
3	JP5 pin 8	CP8, configurable pin	Test point
