Time Delay Relays – Repeat Cycle

R26 Series

91

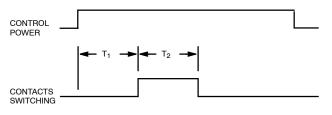

Features

- Universal Input Voltage (U-suffix)
- 16 Time Ranges in Single Timer (0.05 sec. to 100 hrs.)
- **User Sets Time Ranges** . No Math - Just Flip Switches
- Instructions Right on Unit .
- Fine Tuning Knob for Precision Timing •
- Pin for Pin Interchangeable with Timers . in the Field - No Rewiring
- AC or DC Operation
- CMOS Digital Circuitry 0.5% Repeatable Accuracy

OPERATIONS

RECYCLE TIMING - The first delay period begins when input voltage is applied. At the end of the first delay, or "OFF" period, the internal relay pulls in, and the second delay, or "ON" period begins. When the second delay period ends, the relay drops out. This recycling sequence will continue until the removal of input voltage. When input voltage is removed, the relay drops out.
