3.6 Derating

The derated values of dissipation at temperature in excess of 70 °C shall be as indicated by the following curve.

3.7 Rated voltage

d.c. or a.c. r.m.s. voltage calculated from the square root of the product of the rated resistance and the rated dissipation.

E: Rated voltage (V) P: Rated dissipation (W) R: Rated resistance (Ω)

Limiting element voltage can only be applied to resistors when the resistance value is equal to or higher than the critical resistance value.

At high value of resistance, the rated voltage may not be applicable.

3.8 Rated current

The rated current calculated from the square root of the quotient of the rated resistance and the rated dissipation.

$$I = \sqrt{P / R}$$

I: Rated current (A) P: Rated dissipation (W) R: Rated resistance (Ω)

The rated current shall be corresponding to rated voltage.
