| MCOT064048A1V-BM | 64 x 48 | OLED Module |
| Specification | | |
| Version: 1 | Date: 16/09/2016 | |
| Revision | | |
| 1 | 14/09/2016 | First Issue |

| Display Features | |  | |
|-----------------------|------------------------|---|------------------|
| Resolution | 64 x 48 | | |
| Appearance | Blue on Black | | |
| Logic Voltage | 3V | | |
| Interface | Multi | | |
| Module Size | 18.46 x 18.10 x 1.30mm | | |
| Operating Temperature | -40°C ~ +80°C | Box Quantity | Weight / Display |
| Construction | COT | --- | --- |

* - For full design functionality, please use this specification in conjunction with the SSD1306BZ specification. (Provided Separately)

| Display Accessories | |

| Part Number | Description |
| | |
| | |
| | |

| Optional Variants | |
|-------------------|---------|
| Appearance | Voltage |
| White on Black | |
| Yellow on Black | |

General Specification

The Features is described as follow:

- Module dimension: 18.46 × 18.10 × 1.3 mm
- Active area: 13.42 × 10.06 mm
- Dot Matrix: 64 x 48 Dots
- Pixel size: 0.185 × 0.185 mm
- Pixel pitch: 0.210 × 0.210 mm
- Display Mode: Passive Matrix
- Drive Duty: 1/48 Duty
- Display Color: Sky Blue
- IC: SSD1306BZ
- SIZE:0.66 inch

Interface Pin Function

| No. | Symbol | Function | | | | | | | | | | | | | | | | | | | | |
|----------------------|-------------------------------|--|---|-------------------------------|------------------------------------|-----------------------------------|----------------------------|-----|---|---|---|---|-----|---|---|---|---|-----|---|---|---|---|
| 1 | ESD-GND | It should be connected to ground. | | | | | | | | | | | | | | | | | | | | |
| 2 | C2N | <i>Positive Terminal of the Flying Inverting Capacitor r Negative Terminal of the Flying Boost Capacitor</i> The charge-pump capacitors are required between the terminals. They must be floated when the converter is not used. | | | | | | | | | | | | | | | | | | | | |
| 3 | C2P | | | | | | | | | | | | | | | | | | | | | |
| 4 | C1P | | | | | | | | | | | | | | | | | | | | | |
| 5 | C1N | | | | | | | | | | | | | | | | | | | | | |
| 6 | VBAT | | <i>Power Supply for DC/DC Converter Circuit</i> This is the power supply pin for the internal buffer of the DC/DC voltage converter. It must be connected to external source when the converter is used. It should be connected to VDD when the converter is not used. | | | | | | | | | | | | | | | | | | | |
| 7 | VSS | This is a ground pin. | | | | | | | | | | | | | | | | | | | | |
| 8 | VDD | Power supply pin for core logic operation. | | | | | | | | | | | | | | | | | | | | |
| 9 | BS1 | MCU bus interface selection pins. | | | | | | | | | | | | | | | | | | | | |
| 10 | BS2 | <p style="text-align: center;">Table : MCU Bus Interface Pin Selection</p> <table border="1"> <thead> <tr> <th>SSD1306B Pin Name</th> <th>I²C Interface</th> <th>6800-parallel interface (8 bit)</th> <th>8080-parallel interface(8 bit)</th> <th>4-wire Serial interface</th> </tr> </thead> <tbody> <tr> <td>BS0</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>BS1</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>BS2</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> </tr> </tbody> </table> | SSD1306B Pin Name | I ² C Interface | 6800-parallel interface (8 bit) | 8080-parallel interface(8 bit) | 4-wire Serial interface | BS0 | 0 | 0 | 0 | 0 | BS1 | 1 | 0 | 1 | 0 | BS2 | 0 | 1 | 1 | 0 |

| BS2 | 0 | 1 | 1 | 0 | | | | | | | | | | | | | | | | | | |
| 11 | CS# | <i>Chip Select</i> This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low. | | | | | | | | | | | | | | | | | | | | |
| 12 | RES# | <i>Power Reset for Controller and Driver</i> This pin is reset signal input. When the pin is low, initialization of the chip is executed. | | | | | | | | | | | | | | | | | | | | |
| 13 | D/C# | This is Data/Command control pin. When it is pulled HIGH (i.e. connect to VDD), the data at D[7:0] is treated as data. When it is pulled LOW, the data at D[7:0] will be transferred to the command register. In I2C mode, this pin acts as SA0 for slave address selection. When 3-wire serial interface is selected, this pin must be connected to VSS. | | | | | | | | | | | | | | | | | | | | |
| 14 | R/W# | This is read / write control input pin connecting to the MCU interface. When interfacing to a 6800-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Read mode will be carried out when this pin is pulled HIGH (i.e. connect to VDD) and write mode when LOW. | | | | | | | | | | | | | | | | | | | | |

| | | |
|-------|---------|---|
| 15 | E/RD# | <p>When interfacing to a 6800-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled HIGH (i.e. connect to VDD) and the chip is selected.</p> <p>When connecting to an 8080-series microprocessor, this pin receives the Read (RD#) signal. Read operation is initiated when this pin is pulled LOW and the chip is selected. When serial or I2C interface is selected, this pin must be connected to VSS</p> |
| 16~23 | D0~D7 | <p>These are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial interface mode is selected, D0 will be the serial clock input: SCLK; D1 will be the serial data input: SDIN.</p> <p>When I2C mode is selected, D2, D1 should be tied together and serve as SDAout, SDAin in application and D0 is the serial clock input, SCL.</p> |
| 24 | IREF | <p>This is segment output current reference pin. When external IREF is used, a resistor should be connected between this pin and VSS to maintain the IREF current at a maximum of 30uA. Please refer to Figure 7-15 for the details of resistor value.</p> <p>When internal IREF is used, this pin should be kept NC.</p> |
| 25 | VCOMH | <p><i>Voltage Output High Level for COM Signal</i></p> <p>This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and VSS.</p> |
| 26 | VCC | <p><i>Power Supply for OEL Panel</i></p> <p>This is the most positive voltage supply pin of the chip. A stabilization capacitor should be connected between this pin and VSS when the converter is used. It must be connected to external source when the converter is not used.</p> |
| 27 | VLSS | This is an analog ground pin. It should be connected to VSS externally. |
| 28 | ESD GND | It should be connected to ground. |

Absolute Maximum Ratings

| Parameter | Symbol | Min | Max | Unit | Notes |
|----------------------------|--------|-----|-----|------|-------|
| Supply Voltage for Logic | VDD | 0 | 4 | V | 1,2 |
| Supply Voltage for Display | VCC | 0 | 15 | V | 1,2 |
| Operating Temperature | TOP | -40 | +80 | °C | — |
| Storage Temperature | TSTG | -40 | +80 | °C | — |

Note 1: All the above voltages are on the basis of “VSS = 0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

Electrical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|-----------------------------------|--------|-----------|---------|-----|---------|------|
| Supply Voltage for Logic | VDD | — | 2.8 | 3.0 | 3.3 | V |
| Supply Voltage for Display | VCC | — | 7.0 | 7.5 | 8.0 | V |
| Input High Volt. | VIH | — | 0.8×VDD | — | VDDIO | V |
| Input Low Volt. | VIL | — | 0 | — | 0.2×VDD | V |
| Output High Volt. | VOH | — | 0.9×VDD | — | VDDIO | V |
| Output Low Volt. | VOL | — | 0 | — | 0.1×VDD | V |
| 50% Check Board operating Current | ICC | VCC=7.5V | — | 6.0 | 13.0 | mA |

Optical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|---|--------------|-----------|--------|------|------|-------------------|
| View Angle | (V) θ | — | 160 | — | — | deg |
| | (H) ϕ | — | 160 | — | — | deg |
| Contrast Ratio | CR | Dark | 2000:1 | — | — | — |
| Response Time | T rise | — | — | 10 | — | μ s |
| | T fall | — | — | 10 | — | μ s |
| Display with 50% check Board Brightness | | | 80 | 100 | — | cd/m ² |
| CIEx(Sky blue) | | (CIE1931) | 0.12 | 0.16 | 0.20 | — |
| CIEy(Sky blue) | | (CIE1931) | 0.22 | 0.26 | 0.30 | — |

OLED Lifetime

| ITEM | Conditions | Min | Typ | Remark |
|---------------------|---|------------|-----|--------|
| Operating Life Time | Ta=25°C / Initial 50% check board brightness Typical Value | 20,000 Hrs | - | Note |

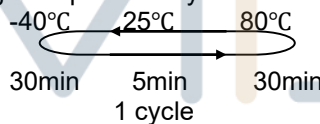

Notes:

1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
3. Screen saving mode will extend OLED lifetime.

Reliability

Content of Reliability Test

| Environmental Test | | | |
|------------------------------------|--|--|---------------------|
| Test Item | Content of Test | Test Condition | Applicable Standard |
| High Temperature storage | Endurance test applying the high storage temperature for a long time. | 80°C 240hrs | — |
| Low Temperature storage | Endurance test applying the low storage temperature for a long time. | -40°C 240hrs | — |
| High Temperature Operation | Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time. | 80°C 240hrs | — |
| Low Temperature Operation | Endurance test applying the electric stress under low temperature for a long time. | -40°C 240hrs | — |
| High Temperature/ Humidity Storage | Endurance test applying the high temperature and high humidity storage for a long time. | 60°C,90%RH 240hrs | — |
| Temperature Cycle | Endurance test applying the low and high temperature cycle.  | -40°C/80°C 100 cycles | — |
| Mechanical Test | | | |
| Vibration test | Endurance test applying the vibration during transportation and using. | 10~22Hz→1.5mmp-p 22~500Hz→1.5G Total 0.5hr | — |
| Shock test | Constructional and mechanical endurance test applying the shock during transportation. | 50G Half sin wave 11 ms 3 times of each direction | — |
| Atmospheric pressure test | Endurance test applying the atmospheric pressure during transportation by air. | 115mbar 40hrs | — |
| Others | | | |
| Static electricity test | Endurance test applying the electric stress to the terminal. | VS=±600V(contact), ±800v(air), RS=330Ω CS=150pF 10 times | — |

*** Supply voltage for OLED system =Operating voltage at 25°C

Test and measurement conditions

1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at $23\pm 5^{\circ}\text{C}$; $55\pm 15\%$ RH.
2. All-pixels-on is used as operation test pattern.
3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

Evaluation criteria

1. The function test is OK.
2. No observable defects.
3. Luminance: $> 50\%$ of initial value.
4. Current consumption: within $\pm 50\%$ of initial value.

APPENDIX:

RESIDUE IMAGE

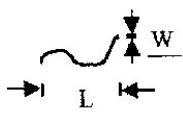

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

| | | 12.2 No cracks on interface pin (OLB) of TCP. | 0.65 |
| | | 12.3 No contamination, solder residue or solder balls on product. | 2.5 |
| | | 12.4 The IC on the TCP may not be damaged, circuits. | 2.5 |
| | | 12.5 The uppermost edge of the protective strip on the interface pin must be present or look as if it cause the interface pin to sever. | 2.5 |
| | | 12.6 The residual rosin or tin oil of soldering (component or chip component) is not burned into brown or black color. | 2.5 |
| | | 12.7 Sealant on top of the ITO circuit has not hardened. | 0.65 |
| | | 12.8 Pin type must match type in specification sheet. | 0.65 |
| | | 12.9 OLED pin loose or missing pins. | 0.65 |
| | | 12.10 Product packaging must the same as specified on packaging specification sheet. | 0.65 |
| | | 12.11 Product dimension and structure must conform to product specification sheet. | 0.65 |

MIDAS

design • manufacture • supply

| Check Item | Classification | Criteria |
|--|----------------|--|
| No Display | Major |  |
| Missing Line | Major |  |
| Pixel Short | Major |  |
| Darker Short | Major |  |
| Wrong Display | Major |  |
| Un-uniform $B/A \times 100\% < 70\%$ $A/C \times 100\% < 70\%$ | Major |  |

Precautions in use of OLED Modules

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, modify its shape or change the components of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Don't operate it above the absolute maximum rating.
- (5) Don't drop, bend or twist OLED display module.
- (6) Soldering: only to the I/O terminals.
- (7) Storage: please storage in anti-static electricity container and clean environment.
- (8) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use fix information for long time in real application.
- (9) Don't use fixed information in OLED panel for long time, that will extend "screen burn" effect time..
- (10) Midas has the right to change the passive components, including R2 and R3 adjust resistors. (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.)
- (11) Midas has the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Midas has the right to modify the version.)

Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched. Please be careful when handling the OLED display module.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage of by using following adhesion tape.

* Scotch Mending Tape No. 810 or an equivalent

Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent Also, pay attention that the following liquid and solvent may spoil the polarizer:

* Water

* Ketone

* Aromatic Solvents

- (6) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (7) Do not apply stress to the LSI chips and the surrounding molded sections.
- (8) Do not disassemble nor modify the OLED display module.
- (9) Do not apply input signals while the logic power is off.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
 - * Be sure to make human body grounding when handling OLED display modules.
 - * Be sure to ground tools to use or assembly such as soldering irons.
 - * To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
 - * Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film.
- (11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (12) If electric current is applied when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. And, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from Midas Displays. At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.
- (2) If electric current is applied when water drops are adhering to the surface of the OLED display module, when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, panel damage may be happen.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) When fastening the OLED display module, fasten the external plastic housing section.
- (7) If power supply to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module. Connection (contact) to any other potential than the above may lead to rupture of the IC.
