# NS-Series **CX-Designer** Ver. 2.1 NS-CXDC1-V2

# **USER'S MANUAL**

# OMRON

# CX-Designer Ver. 2.1 NS-CXDC1-V2

## **User's Manual**

Revised July 2007

## Notice:

OMRON products are manufactured for use according to proper procedures by a qualified operator and only for the purposes described in this manual.

The following conventions are used to indicate and classify precautions in this manual. Always heed the information provided with them. Failure to heed precautions can result in injury to people or damage to property.

- **DANGER** Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. Additionally, there may be severe property damage.
- **WARNING** Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Additionally, there may be severe property damage.
- **Caution** Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury, or property damage.

## **OMRON Product References**

All OMRON products are capitalized in this manual. The word "Unit" is also capitalized when it refers to an OMRON product, regardless of whether or not it appears in the proper name of the product.

The abbreviation "Ch," which appears in some displays and on some OMRON products, often means "word" and is abbreviated "Wd" in documentation in this sense.

The abbreviation "PLC" means Programmable Controller. "PC" is used, however, in some Programming Device displays to mean Programmable Controller.

## Visual Aids

The following headings appear in the left column of the manual to help you locate different types of information.

- **Note** Indicates information of particular interest for efficient and convenient operation of the product.
- *1,2,3...* 1. Indicates lists of one sort or another, such as procedures, checklists, etc.

## Terminology

NS-series PT	A Programmable Terminal in the NS Series manufactured by OMRON.
PLC	A Programmable Logic Controller manufactured by OMRON.
Host	A PLC, factory computer, personal computer or other controller controlling an NS-series PT.
NS-Designer	The NS-NSDC1-V $\square$ NS-Designer produced by OMRON. The NS-Designer is an applications software package that enables creating screen data for NS-series PTs.
CX-One	The CXONE-AL C-E CX-One FA Integrated Tool Package produced by OMRON. This applications software package provides all of the software packages for OMRON PLCs and components.
CX-Designer	The NS-CXDC1-V2 CX-Designer produced by OMRON.
NS-Runtime	The NS-Runtime software runs on Windows XP and provides the same functionality as an NS-series PT.

## About this Manual:

The CX-Designer is a software package that enables creating screens for OMRON Programmable Terminals. Please be sure you understand the functions and performance of the CX-Designer to ensure correct application of the Programmable Terminals.

Please read this manual and related manuals carefully and be sure you understand the information provided before attempting to use the CX-Designer.

*Section 1* provides an overview of the CX-Designer and its features and explains basic operating methods.

Section 2 describes how to install and uninstall the CX-Designer.

Section 3 describes the CX-Designer menus and basic procedures.

Section 4 describes convenient functions of the CX-Designer.

The *Appendices* provide a comparison between the CX-Designer and NS-Designer, tables of shortcut keys, and data transfer procedures between different versions of NS-series PT.

# **Guide to Version Upgrade**

## From CX-Designer Version 1.0 to Version 2.0

Item	Previous versions	New version
CX-Designer	Version 1.0 (NS-CXDC1-V1)	Version 2.0 (NS-CXDC1-V2)
NS system software	Version 6.2 or 6.5	Version 6.6
Integrated simulation	The only function available was simulated testing of PT screen operations on a per- sonal computer.	Using a personal computer, a virtual PT can be connected to a virtual PLC (CX- Simulator) or to an actual PLC, and the operation of the entire PT-PLC system can be simulated. This makes it possible to reduce the total time involved in debugging.
Symbol programming without addresses	Symbol names, addresses, and comments were entered in symbol tables. Then the required symbols were selected from the symbol tables when creating screens.	Symbol names and comments can be input for symbol tables with no addresses. This allows screens to be created using symbol names without inputting addresses. Enter- ing symbols in screen designs without addresses makes it possible to reduce the total time involved in design.
Multi-vendor connectivity	Not supported.	It is now possible to connect OMRON NS- series PTs to Mitsubishi FX-series PLCs, A-series PLCs, and Siemens S7-series PLCs.
Data security	<ul> <li>The following two types of data transfers are possible between CX-Designer (running on a personal computer) and a PT:</li> <li>Data transfers with the PT.</li> <li>With data transfers using a Memory Card, data can be uploaded and downloaded by any user.</li> </ul>	A password can now be set for creating data. When data with a set password is transferred to a PT, the password is then required in order to upload the data. This prevents users who do not know the pass- word from obtaining that data from the PT. In addition, a password can be required to transfer data to the PT. This prevents data from being accidentally overwritten.
User security	Any of five levels of passwords could be set for each functional object. A dialog box ask- ing for the password was displayed each time an attempt was made to use a func- tional object for which a password had been set, and the object could not be used unless the password was input.	Once a user inputs the password to use a functional object for which a password has been set, the password does not have to be input again as long as the user continues using only functional objects for which lower level passwords have been set. Functional objects with a higher-level password cannot be manipulated. (A warning message will be displayed if an attempt is made.) This makes it possible to create applications that permit only the necessary operations by users who have entered passwords, and thus helps prevent faulty operations.
Consecutive line drawing	Not available.	Data in memory is treated as X and Y coor- dinates, and straight lines are drawn between the applicable coordinates to cre- ate consecutive line drawing. This makes it possible to handle applications involving the drawing of various graphics in two- dimensional space that could not be drawn using the existing graph components.

Item	Previous versions	New version
Improvements in broken-line	Number of monitor points: 256 max.	•Number of monitor points: 1,000 max.
graph		Batch reading
		<ul> <li>Graph overwriting</li> </ul>
		<ul> <li>Indirect specification of starting display position</li> </ul>
		<ul> <li>Indirect specification of displaying/hiding graph lines</li> </ul>
		<ul> <li>Indirect specification of displaying/hiding scale lines</li> </ul>
Ladder Monitor	To use the Ladder Monitor it was necessary to copy the Ladder Monitor software from a CD-ROM to a Memory Card and to install the Memory Card in an NS-series PT. In addition, the PT was reset when starting or exiting the Ladder Monitor.	With version-2 NS-series PTs (except for the NS5-V2 and NSJ5), ladder monitoring is built into the PT as a standard feature, so no separate Memory Card is required. (A Memory Card is required for version-1 PTs, however, just as before.) In addition, neither version-1 nor version-2 PTs are reset when starting or ending the Ladder Monitor when Ladder Monitor version 2.8 is used. These improvements make the Ladder Monitor easier to use and reduce operating time.
Symbol table transfers when transferring screen data	Symbol tables set using the CX-Designer could be managed only by the CX- Designer, and symbol data was lost when data was uploaded from an NS-series PT.	When screen data is downloaded from the CX-Designer, the symbol tables are down- loaded together with it. Likewise, when screen data is uploaded, the symbol tables are uploaded too.
Holding log and alarm informa- tion when transferring screen data	All of the log and alarm information in the PT was initialized when screen data was downloaded.	It is now possible to select whether log and alarm information is to be initialized when screen data is downloaded.
PLC data trace reading	Not supported. (This was a function of the CX-Programmer.)	Trace results from data traces (which is a CPU Unit function) can now be read by the PT and displayed in time chart format. (CSV files cannot be saved.) This makes it possible, using just the PT without CX-Programmer, to isolate the causes of errors that occur on-site.
Addition of European fonts	With the built-in raster fonts in NS-series PTs, Russian and Greek characters were full-width and not all characters were available.	All Russian and Greek characters are now available, and all characters are half-width.
Japanese file names	Two-byte characters could not be used for project file names.	Two-byte characters can now be used for project file names.
Video display mode setting	Image quality could not be adjusted when an NS-CA002 RGB/Video Input Unit was used.	It is now possible to select from three pat- terns for image quality adjustment. When a visual sensor is connected, even small dis- play characters can be read. It is now also possible to adjust the display position for RGB display.
SAP (Smart Active Parts)		SAP has been added for the EJ1 Modular Temperature Controller, G3ZA Multi-chan- nel Power Controller, and Troubleshooters.
Automatic using symbol names		Symbol names and I/O comments of the
and I/O comments as labels		communications addresses can be auto-
and alarm messages		matically used as functional object labels and alarm messages.
NS-Runtime		Projects can be created for NS-Runtime.

## From CX-Designer Version 2.0 to Version 2.1

Item	Previous versions	New version	
CX-Designer	Version 2.0	Version 2.1	
NS system software	Version 6.6	Version 7.0	
Multi-vendor connectivity		It is now possible to connect NS-series PTs to the following devices.	
		OMRON Trajexia Motion Controllers	
		Yaskawa MP-series Machine Controllers	
		Yaskawa F7-series Varispeed and VS Mini V7-series Machine Controllers	
		• Mitsubishi Q-series PLCs	
		Yaskawa Eshed Technology XtraDrive Motion Controllers	
NT compatibility		System memory can now be allocated to PLC memory areas in the same way as for the NT Series, enabling PLC ladder pro- grams to be easily transferred when migrat- ing from the NT Series to the NS Series.	
Holding previous system mem- ory values	When an NS-series PT was started, the ini- tial screen set in the System Setup was always opened.	It is now possible to display at the next star- tup the screen that was being displayed when the program was closed.	
Multilingual system capability	The system supported two languages: English and Japanese.	In addition to English and Japanese, the system now also supports German, French, Italian, Spanish, and Chinese (both traditional and simplified).	
Multifunction Objects	Macros were required in order to executed multiple processes for a single functional	Multifunction Objects have been added to functional objects.	
	object.	With Multifunction Object, multiple pro- cesses can be registered and can then be executed with the press of a button.	
		Processes that previously required the cre- ation of macros can now be executed by simply setting properties.	
Machine Navigator function	Multiple objects, such as frames, labels, and bitmaps, were used to change displays such as on-screen characters and BMP files. Contents of displays were set individ- ually, which was time-consuming and made maintenance troublesome.	A Machine Navigator function and a func- tional object contents display function have been added. Machine Navigator provides unified control of text and image files (i.e., "contents") to be displayed, and the new display function displays those contents.	
		Contents requiring association can be managed in ID units, and the display can be easily changed by simply changing the ID specification.	
Flicker function	The only flicker method for objects was display color inversion.	The following flicker methods have been added.	
		<ul> <li>Display/hide (entire object or label)</li> <li>Flicker color specification (fill color, character, and line colors)</li> </ul>	
Improved alarm/event sum- mary and history display	When the history was displayed using the Alarm/event Summary & History command, the same alarm/event was displayed in multiple places for each date of occurrence. This made it difficult to check the frequency of occurrence.	A function has been added to provide a summary of a particular alarm/event on a single line, making it possible to quickly check conditions without unnecessary dis- plays. A horizontal scrolling function has also	
	In addition, in some cases there were many items to be displayed and not all of them could fit on the screen.	been added to allow all items to be checked.	

Item	Previous versions	New version	
Fonts	Raster fonts could be set for objects with changing display character strings, such as numeric displays and inputs. Rounded areas became rough, however, when the font size was increased.	Scalable fonts have been added to enable smooth displays. Gothic numeral and 7- segment displays have also been added to allow more attractive and up-to-date screens to be created.	
Improved screen switching function		Speed and bitmap performance have been improved for switching screens.	
Improved connection opera- tions	When serial ports A and B were both set for use for NT Links, "Connecting" was dis- played if either of the hosts was not con- nected.	Even if one host is not connected, the mon- itoring results of the connected host can be displayed on the screen without "Connect- ing" being displayed.	
SAP Library allocated unit number and communications setting information display	SAP Library settings could not be checked even by displaying addresses using screen data checking from the System Menu.	The following information can now be dis- played. • Command destination port names • Destination network addresses • Destination node addresses • Destination unit numbers • DeviceNet Slave Unit address and Inverter node addresses	
Programming Console function	To use the Programming Console function with the NS5-V2, it was necessary to copy the program onto a Memory Card and to insert the Memory Card into the NS5-V2.	The Programming Console function is built- in to the NS5-V2, so there is no need for a Memory Card.	
Bar codes	The maximum length of data that could be processed by an NS-series PT was 40 bytes.	The maximum data length has been increased to 254 bytes, allowing the data to be processed by two-dimensional bar code readers.	
Test screens		<ul> <li>The following functions have been added to test screens.</li> <li>Zoom</li> <li>Always displaying on top</li> <li>Starting test screens in the previous display position and zoom status</li> </ul>	
DXF files	DXF files could not be accessed.	It is now possible to convert DXF files to graphics and position them with the CX-Designer.	
Initialization options for alarm/ event history data	When the alarm/event history data was cleared by using \$SB32, all history data was cleared including current alarms or events.	System Memory \$SW40 has been added so that it is now possible to specify initializ- ing cleared or confirmed history data.	
Changing host settings with the System Menu	The settings of a host connected by Ether- net or Controller Link could not be checked with the System Menu.	A list of hosts can now be displayed by selecting Communications Settings from the System Menu. It is now also possible to change the host network address, node address, and host type.	

## **Related Manuals:**

The manuals related to using the CX-Designer are listed below. Manual suffixes have been omitted. Please be sure you have the most recent version for your area.

#### Installing the CX-Designer

#### CX-Designer User's Manual - - - - - - - - - - - V088

This manual describes how to install the CX-Designer and the user interface. It also describes characteristic functions and application methods.

## NS-Runtime User's Manual - - - - - - - - - V093

This manual describes the special functions of NS-Runtime.

## Read and Understand this Manual

Please read and understand this manual before using the product. Please consult your OMRON representative if you have any questions or comments.

## Warranty and Limitations of Liability

#### WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

## LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## **Application Considerations**

## SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this manual.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

## **PROGRAMMABLE PRODUCTS**

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

## Disclaimers

### CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

#### DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

#### PERFORMANCE DATA

Performance data given in this manual is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

## ERRORS AND OMISSIONS

The information in this manual has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

## SECTION 1 Overview

This section describes the features of the CX-Designer and the startup procedures for NS-series PTs for first-time users.

1-1	Feature	s of the CX-Designer	2
	1-1-1	Features	2
1-2	Basic C	peration Procedures	5

#### Features of the CX-Designer 1-1

The CX-Designer is software that can be run on Windows 98 SE, NT, Me, 2000, XP, or Vista to create screen data for NS-series Programmable Terminals (PTs).

The CX-Designer has a variety of functions to enable efficient screen creation and debugging.

Edit Screens Screen data displayed on the PTs can be created for a group of objects.

#### Functional object property settings can be changed and checked without having to open a properties dialog box.

Project Workspace

Property List

**Output Window** Displays data such as search results and error details.

#### 1-1-1 **Features**

Screens Can Be Created Using Symbols

Symbols can be used with the CX-Designer. Symbols are addresses to which names have been assigned. In addition to the existing method of directly inputting addresses to be browsed by functional objects, the addresses can also be set by using symbols (names). When the address allocated for a symbol is changed, the address is changed for all objects that access that symbol. This makes it easy to change address allocations and reuse screens. Symbols can also be shared by the CX-Designer and CX-Programmer by copying the symbols from CX-Programmer symbol tables to the CX-Designer.

Refer to 4-1 Creating Screens Using Symbols for details.

**Project Management** Screens, alarms, and other common settings can be displayed in a directory Using Project Workspace tree in the CX-Designer project workspace. Projects are easy to manage because the entire project structure can be checked at a glance.

> Screens and settings can be copied between multiple CX-Designer project workspaces. Screens can also be copied within the same project workspace. Refer to 4-2 Using Screens from Other Projects for details.

Easy Reuse of Screens Screens and settings can be copied between multiple CX-Designer project workspaces. Screens can also be copied within the same project workspace. The common settings accessed by screens are also copied automatically.

> If symbols are used, it also becomes easy to change addresses after screens have been copied. Refer to 4-2 Using Screens from Other Projects for details.

Screen Classification by Screens can be classified into any category, e.g., by application, and dis-**Application for Easy** played in a directory tree. When screens are created, consecutive screen Management numbers are automatically applied to screens in the same category. These numbers can also be changed. This makes screen management even easier.

Refer to 4-3 Classifying Screens by Application for details.

Functional Object Property Settings Using	Functional object settings can be changed and checked without having to open a dialog box.
Property Lists	When more than one object is selected, common settings for those objects can be changed in one operation from the property list.
	Refer to 4-4 Checking and Changing Functional Object Properties without Opening Property Setting Dialog Boxes.
Edit Properties from Lists	Properties of objects on the screen can be displayed in table format and the settings changed.
	Settings for more than one object can be changed at the same time and con- secutive addresses can be automatically set.
	Refer to 4-5 Listing and Editing Functional Object Properties for details.
Select and Display Specified Objects	Objects on the screen can be listed and specified objects selected. The screen display can also be limited to specified objects.
	This makes it easy to check and change the property settings for overlapping objects.
	Refer to 4-6 Editing Overlapping Objects for details.
Find Macros	Embedded macros can be listed.
	This improves debugging efficiency by no longer requiring individual object property settings to be opened to find objects that use macros.
	Refer to 4-9 Searching for Embedded Macros for details.
Automatic Transfer of Edited Data Only	Once screens have been transferred to the PT, quick transfers of only the changed data can be made automatically. Screens are edited and data transferred many times during debugging, so the quick transfer function greatly reduces transfer time and increases efficiency.
	Refer to 4-10 Transferring Only Edited Data to PT for details.
Easy Document Creation	Common settings and property settings for objects in screens can be output in rich text format (.rtf). The output settings are displayed in a list for easier viewing.
	Screen images can also be output to bmp and jpg files.
	Refer to 4-11 Creating Documents for details.
Integrated Simulation for Entire PT-PLC System (CX-Designer Version 2.0 and Higher)	The CX-Designer test function can be connected to the CX-Simulator (a vir- tual PLC). When the CX-Simulator is started, the PLC user program created using the CX-Programmer can be debugged on a personal computer together with screen data.

In addition, the test function can be connected directly to an actual PLC. This enables debugging (including monitoring and settings) using actual I/O, Special I/O Units, and CPU Bus Units connected to the PLCs, as well as data from external devices and PLC data on the network.

- 1. Integrated operations with screens and user programs can be tested on a personal computer
- Screen operations can be tested while connected to the actual PLC System (including external devices).

Prevent Unauthorized Uploading of Data from the PT (CX-Designer Version 2.0 and Higher)

To prevent data theft from the PT, a password can be required to upload project data. Data cannot be uploaded from the PT unless the correct password is input. A password can also be required for downloading data to prevent data from being accidentally overwritten.

**Note** Project data created using the NS-Designer can be used with the CX-Designer. Project data created using the CX-Designer can also be used with the NS-Designer. (Only project data versions supported by NS-Designer, however, can be used.)

Designer

#### 1-2 **Basic Operation Procedures**

This section describes the basic procedures for creating screens using CX-Designer, transferring data to the PT, and displaying screens. Refer to the CX-Designer online help and the NS Series Setup Manual and NS Series Programming Manual for details.

#### Section 1-2

# Transferring Projects and Screens to the PT

#### **Communications between** the PT and PLC

Refer to 6-10 Starting Operation in the NS Series Setup Manual.

## SECTION 2 Setting Up the CX-Designer

The CX-Designer must be installed on the computer before it can be used for the first time. The CX-Designer is application software that runs on a Windows 98 SE, NT, Me, 2000, XP, or Vista operating system. This section describes how to install the CX-Designer assuming that the Windows 98 SE, NT, Me, 2000, XP, or Vista operating system has already been installed on the computer.

2-1	Preparations for Installation	12
2-2	Installing the CX-Designer	13
2-3	Uninstalling	18
2-4	Installing USB Drivers for NS-Series PTs	18

## 2-1 Preparations for Installation

Check to be sure that the following system requirements have been met before installing the CX-Designer.

#### System Requirements

**<u>S</u>** The system requirements for the CX-Designer are given in the following table.

Item	Requirement				
Operating system (OS) (See note 1.) Japanese or English system	Microsoft Win- dows 98SE or Me	Microsoft Win- dows NT (Ser- vice Pack 6a)	Microsoft Win- dows 2000 (Ser- vice Pack 3 or higher)	Microsoft Win- dows XP	Microsoft Windows Vista (except for 64-bit edition) (See note 3.)
Computer	IBM PC/AT or con sor (Pentium III 1 GH	BM PC/AT or compatible with a Pentium II 333 MHz or faster proces- or Pentium III 1 GHz or faster recommended.)		IBM AT-compatible per- sonal computer with the processor recommended by Microsoft.	
	A minimum ommended.			A minimum of 1 GHz is recommended.	
Memory	256 MB minimum of 1 GB of memory is required, and a minimum of 1.5 GB is rec- ommended.				
Hard disk	Approx. 700 MB or more available space is required to install.				
Display	SVGA (800 $\times$ 600) or better high-resolution display with 256 colors min.				
Disk drive	CD-ROM drive				
Communications ports	1 port minimum,	either RS-232C or	USB (See note 2.	.)	
Other	Internet access is nection method.	s required for onlin	e user registration	, including a mode	em or other hardware con-

- (1) CX-Designer Operating System Precaution The CX-Designer will not run on Microsoft Windows 95 or any other OS not listed above. If such an OS is being used on the client computer, the OS must be upgraded before installing the CX-Designer. System requirements and hard disk space may vary with the system environment.
- (2) An RS-232C or USB port is required for connecting to the NS-series PT. When Windows NT4.0 is used, however, data cannot be transferred via the USB port.
- (3) The following restrictions apply when using CX-Designer version 2.1 with Microsoft Windows Vista.

Some help files cannot be referenced.

Help files can be referenced if the help program (WinHlp32.exe) for Windows Vista (distributed by Microsoft Corporation) is imported. For details, either refer to the Microsoft home page below or contact Microsoft Corporation. (When connected online, the download page is displayed automatically by opening the help file.)

Using CX-Designer with Windows Vista

The following restrictions apply when using CX-Designer with Windows Vista.

Section 2-2

Item	Contents
Fonts	When project data created outside of Windows Vista is saved in Windows Vista, characters using fonts that are different in Windows Vista will be changed.
	Similarly, characters in project data using fonts added or changed in Windows Vista will be changed when saved outside of Windows Vista.
Memory Card Transfer Support Software	Two-bytes characters used in file names and folder names on the Memory Card will not be displayed nor-mally.

#### 2-2 Installing the CX-Designer

Install the CX-Designer in the hard disk.

To install the CX-Designer, execute the installation program provided.

For details on procedures for installing the CX-Designer from CX-One FA Integrated Tool Package, refer to the *CX-One Ver. 2.1 Setup Manual* provided with CX-One.

Cat. No.	Model	Manual name	Contents
W463	CXONE-ALOC-	CX-One Ver. 2.1	Installation and overview of CX-
	EV2/ALOD-EV2	Setup Manual	One FA Integrated Tool Package.

**Note** If the CX-Designer was previously installed from the CX-One and it's necessary to install it from the individual CX-Designer CD-ROM, always uninstall the CX-Designer using the following procedure before installing it from its individual CD-ROM. The CX-Designer will not operate properly if it is installed without first uninstalling it.

- 1,2,3... 1. Insert the CX-One installation disk 1 into the CD-ROM drive.
  - 2. Select the *Modify* Option to enable modifying the Support Software that is installed.
  - 3. In the Select Features Dialog Box, clear the selection of only the CX-Designer. Do not change any other selections.
  - 4. Continue by following the instructions in the dialog boxes to modify the installation and uninstall CX-Designer.
  - 5. Once the CX-Designer uninstallation process has been completed, place the individual CD-ROM disk for the CX-Designer into the CD-ROM drive and install the CX-Designer. (See note.)
    - **Note** If the version of the CX-Server bundled on the individual CX-Designer CD-ROM is lower than the version of the CX-Server bundled with the CX-One, install only the CX-Designer and NOT the CX-Server. If a version of CX-Server that is lower than the version with the CX-One is installed, the CX-One will not operate properly.

The main buttons that are displayed during installation are as follows:

			 а.
- N I	- uk	× .	
- 13	ext	- 2 -	
_			

Confirms the settings in the window displayed and moves to the next window.

k <u>B</u>ack

Cancels the settings in the window displayed and returns to the previous window.

Closes the window currently being displayed. The settings in the window are cancelled.

Installation can be cancelled by pressing this button in the installation window. A confirmation message will be displayed.

Browse...

The actual folder configuration is displayed in a tree format, from which the folders where installation files are to be installed can be selected.

#### Installation Procedure

- 1,2,3... 1. Start up Windows 98SE, NT, Me, 2000, XP, or Vista.
  - 2. Close all applications before executing installation. Place the CX-Designer CD-ROM in the CD-ROM drive. The setup program is started automatically. If the setup program does not start automatically, such as after executing uninstall, locate Setup.exe in the CD-ROM using Windows Explorer, and then double-click the file to execute the setup program.
  - **Note** If CX-Designer is already installed, a dialog box to confirm deletion of this version will be displayed. Click the OK Button to start deleting this version. To exit the setup program, click the Cancel Button and then click the Exit Button. FinsGateway and CX-Server will not be uninstalled by this operation.
    - 3. The CX-Designer Setup Wizard will be displayed. Install the CX-Designer by following the instructions in the Setup Wizard.

X-Designer_V2.0 - Instal	IShield Wizard
	Welcome to the InstallShield Wizard for CX-Designer_V2.0
	The InstallShield® Wizard will install CX-Designer_V2.0 on your computer. To continue, click Next.
	Cancel

4. During installation, the installation progress is displayed as a percentage.

5. When CX-Designer installation has been completed, a message to confirm installation of Smart Active Parts will be displayed. Click the **Yes** Button to start the installation. If Smart Active Parts installation is not required, click the **No** Button and proceed to step 10.

M		
Do you want to in	nstall Smart Ac	tive Parts?
<u>Y</u> es	No	
	Do you want to ir	Do you want to install Smart Ac

Smart Active Parts are libraries containing setting/monitoring screens (e.g., Position Control Unit setting screens and Temperature Controller monitoring screens).

6. The following dialog box will be displayed. Install the software according the instructions given in window messages.

7. During installation, the installation progress is displayed as a percentage. When installation has been completed, the following dialog box will be displayed. Click the **Finish** Button.

	InstallShield Wizard Complete Setup has finished installing Smart Active Parts on your computer.
	Ender Finish Dandei

8. A message will be displayed to confirm installation of the CX-Server. Click the **Yes** Button.

9. When installation has been completed, the following dialog box will be displayed. Select whether or not to restart the computer immediately, and click the **Finish** Button to complete the installation. Always restart the computer before using CX-Designer.

CX-Designer_V2.0 - Insta	liShield Wizard
	InstallShield Wizard Complete
	Setup has finished installing CX-Designer_V2.0 on your computer.
	Yes, I want to restart my computer now.
	C No, I will restart my computer later.
	Remove any disks from their drives, and then click Finish to complete setup.
	K Back Finish Cancel

Note

- (1) When installing CX-Designer in Windows NT, 2000, XP, or Vista, log onto the computer as the administrator to ensure that system DLL files can be overwritten. If overwriting system DLL files fails, CX-Designer may not operate properly.
  - (2) When adding Smart Active Parts after installation of CX-Designer, double-click the CD-ROM directory \SmartActiveParts\Setup.exe from Windows Explorer to execute the setup program. Select all the Smart Active Parts to be used in the dialog box for selecting components.
  - (3) Refer to the *How to manage after conversion* file in the Programs Folder under the Windows Start Menu for details after NT31C/NT631C Conversion Support Tool conversion.
  - (4) Internet Explorer Ver 5.5 or higher is required to transfer data.

## 2-4 Installing USB Drivers for NS-Series PTs.

Install the NS-series USB driver in the personal computer. After installation, data can be transferred between the personal computer and NS-series PT via USB.

Note (1) With NS-V1 Series models, make sure that the PT has a lot number that supports USB transmission. The system program version of the NS-series PT must also support USB transmission. For details, refer to 3-3-2 Connecting via USB in the NS series Setup Manual (Cat. No. V083). (2) If an NS-series USB driver has already been installed for use with the NS-Designer, the NS-series USB driver must be installed again to use the CX-Designer. (3) Do not install the NS-series USB driver for the NS-Designer while the CX-Designer is being used. **Applicable Operating** Windows 98SE, Windows Me, Windows 2000, Windows XP, and Windows Systems Vista **Operation Procedure** Windows 2000, Windows XP, and Windows Vista: 1,2,3... 1. Start Windows 2000, Windows XP, or Windows Vista.

#### Section 2-4

- Connect the personal computer to the NS-series PT USB slave connector using the USB cable. The following Found New Hardware Wizard will be displayed.
- 3. For Windows 2000, select *Display a list of the known drivers for this device so that I can choose a specific driver* and click the **Next** Button. For Windows XP, select *Install from a list or specific location (Advanced)* and click the **Next** Button.

4. The dialog box shown below will be displayed. Confirm that Search for the best driver for my device (Recommended) is selected. Select the Include this location in the search option, click the Browse Button and specify the following CX-Server installation directory folder: \USB

Then click the Next Button.

Please choose your search and installation options.
<ul> <li>Search for the best driver in these locations.</li> <li>Use the check boxes below to limit or expand the default search, which includes local paths and removable media. ## SECTION 3 Basic Operations of the CX-Designer

This section describes basic functions and operation methods, such as starting and exiting CX-Designer and the user interface.

3-1	Starting and Exiting CX-Designer		26	
	3-1-1	Startup Method	26	
	3-1-2	Exiting CX-Designer	26	
3-2	Menu Commands			
3-3	User Ir	nterface	34	
	3-3-1	Names of Basic Screen Components	34	
	3-3-2	CX-Designer Functions and Screens	41	

## 3-1 Starting and Exiting CX-Designer

This section describes how to start and exit the CX-Designer.

### 3-1-1 Startup Method

To start the CX-Designer, click the Windows **Start** Button, and then select *Programs - OMRON - CX-One - CX-Designer - CX-Designer Ver.* (The items displayed may vary according to the program folder specified during installation). Alternatively, right-click the NS-series PT in the Network Configuration Window of CX-Integrator, and select **Start Special Application - Start Only.** 

When the CX-Designer startup is completed, the Main Window will be displayed, as follows:

- **Note** (1) More than one copy of the CX-Designer application can be run at the same time.
  - (2) To start CX-Designer, log in as the administrator when using a personal computer running Windows NT, 2000, XP, or Vista.

### 3-1-2 Exiting CX-Designer

Use one of the following operations to exit the CX-Designer.

- Select *Exit* from the File Menu.
- Click the Close Button |x| at the top right of the Main Window.
- Double-click the CX-Designer icon at the top left of the Main Window.
- Click the CX-Designer icon at the top left of the Main Window and select *Close* from the Control Menu Box.
- Press the Alt + F4 Keys.

If the project data that is open has not been saved, a confirmation message will be displayed.

When the CX-Designer is exited, the system will return to the Windows display.

## 3-2 Menu Commands

The commands that appear on the pull-down menus of the CX-Designer and their functions are described in the following tables.

File Menu

	Command	Function	Shortcut keys
Ne	w Project	Creates a new project.	
Ор	en Project	Opens an existing project.	
Clo	ose Project	Closes the project currently open without exiting the CX-Designer.	
Sa	ve Project As	Saves the current project under a specified name.	
Sa	ve All	Saves (overwrites) all of the data for the current project.	Ctrl+S
Ne	w Screen	Creates a new screen under the current project.	Ctrl+N
Ор	en Screen	Opens the project workspace.	Ctrl+O
Sa	ve Screen/Sheet	Saves the current screen or sheet.	Ctrl+Shift+S
Ne	w Sheet	Creates a new sheet under the current project.	Ctrl+Shift+N
Ap	ply Sheet	Sets a screen with overlapping sheets.	Ctrl+J
Im	oort CSV File	Imports project or screen data saved in CSV format to the current project or screen.	
Ex	port CSV File	Exports the current project or screen data to a file in CSV format.	
Pa	ge Setup	Makes the printer settings.	
Pre	eview	Shows a preview of the printed image.	
Pri	nt	Outputs current project or screen information to a printer or to a file. Select <i>Print</i> to display a preview.	Ctrl+P
Da	ta Transfer Security	/	
	New Data Trans- fer Security Set- ting	Sets a password to be input when transfer- ring data.	
	Change Data Transfer Secu- rity Setting	Changes data transfer security setting.	
	Cancel Data Transfer Secu- rity Setting	Deletes data transfer security setting.	
Re	cent Projects	Displays a list of currently edited projects. (Up to ten projects are displayed.)	
Ex	it	Ends the CX-Designer.	

#### Edit Menu

Command		Function	Shortcut keys
Un	do	Discards changes and restores the previous status.	Ctrl+Z
Redo		Restores the changes discarded with Undo.	Ctrl+Y
Cut	İ.	Deletes the selected objects and places them in the internal buffer.	Ctrl+X, Shift+DEL
Co	ру	Copies the selected objects and places them in the internal buffer.	Ctrl+C
Pas	ste	Pastes objects that have been cut or copied.	Ctrl+V, Shift+Ins
Pas	ste (Style Only)	Pastes objects that have been cut or copied using the default address settings.	
De	ete	Deletes the selected objects.	DEL
Gro	oup		
	Group	Groups more than one functional or fixed object to create a single object.	Ctrl+G
	Ungroup	Ungroups grouped objects.	Ctrl+U
Orc	ler		
	Front	Brings the currently selected object to the front.	
	Back	Sends the currently selected object to the back.	
	Bring Forward	Brings the currently selected object forward.	
	Send Backward	Sends the currently selected object back.	
Alig	n/Distribute		
	Align Left	Aligns the currently selected objects to the left.	
	Center in a Column	Aligns the vertical centers of the currently selected objects.	
	Align Right	Aligns the currently selected objects to the right.	
	Align Top	Aligns the currently selected objects to the top.	
	Center in a Row	Aligns the horizontal centers of the currently selected objects.	
	Align Bottom	Aligns the currently selected objects to the bottom.	
	Distribute Horizontally	Distributes the currently selected objects equi- distant (between mid-points) horizontally.	
	Distribute Vertically	Distributes the currently selected objects equi- distant (between mid-points) vertically.	
Ма	ke Same Size		
	Smallest Width	Aligns the currently selected objects to the smallest width.	
	Largest Width	Aligns the currently selected objects to the largest width.	
	Smallest Height	Aligns the currently selected objects to the smallest height.	
	Largest Height	Aligns the currently selected objects to the largest height.	
	Table Column Width	Aligns table columns to equal widths.	
	Table Row Height	Aligns table rows to equal heights.	

Command		Function	Shortcut keys
Nuo	dge		
	Up	Moves the selected object one dot or one grid unit up.	1
	Down	Moves the selected object one dot or one grid unit down.	$\downarrow$
	Left	Moves the selected object one dot or one grid unit to the left.	$\leftarrow$
	Right	Moves the selected object one dot or one grid unit to the right.	$\rightarrow$
Rot	ate/Flip		
	Rotate Right 90 Degrees	Rotates the currently selected object 90 degrees to the right.	
	Rotate Left 90 Degrees	Rotates the currently selected object 90 degrees to the left.	
	Rotate Right 90 Degrees Around Center of Screen/ Frame	Rotates the currently selected object 90 degrees to the right around the center of the screen or frame.	
	Rotate Left 90 Degrees Around Center of Screen/ Frame	Rotates the currently selected object 90 degrees to the left around the center of the screen or frame.	
	Flip Horizontal	Flips the currently selected object horizontally.	
	Flip Vertical	Flips the currently selected object vertically.	
	Flip Horizontal Around Center of Screen/ Frame	Flips the currently selected object horizontally around the center of the screen or frame.	
	Flip Vertical Around Center of Screen/ Frame	Flips the currently selected object vertically around the center of the screen or frame.	
Edit Node		Changes the positions of the vertices to change the shape of a fixed object node.	
Select All			•
	All Objects	Selects all objects on the screen.	Ctrl+A
	Same Type Objects	Selects all objects of the same type as the currently selected object.	Ctrl+D
Rep	peat	Makes multiple copies of the selected objects.	Ctrl+W
Edit Properties		Displays a list of functional objects on screen to enable changing property settings.	Ctrl+L

#### **Find Menu**

Command	Function	Shortcut keys
Find	Searches for address or character string key- words.	Ctrl+F
Replace	Replaces the specified addresses.	Ctrl+H
Address Cross Reference	Finds locations where an address is used and lists the results.	Ctrl+R
Macro Cross Refer- ence	Lists macro locations.	
Replace Host	Replaces the host for all addresses in the project.	

View Menu

Command		Function	Shortcut keys
То		Displays and hides the tealbar	
Window		Displays and fides the toolbar.	
VVI	Droject	Diaplays and hides the project workenses	A I+ . 1
	Workspace	Displays and fides the project workspace.	
	Symbol Table	Displays and hides the symbol table.	Alt+2
	Property List	Displays and hides the property list.	Alt+3
	Library	Displays and hides the Library Window.	Alt+4
	Select Object	Displays and hides the object selection.	Alt+5
	Address in Use List	Displays and hides the List Up Addresses Used Window.	Alt+6
	Output Window	Displays and hides the Output Window.	Alt+7
Sta	itus Bar	Displays and hides the Status Bar.	
Pre	evious Label	Displays the previous label.	Ctrl+PgUp
Ne	xt Label	Displays the next label.	Ctrl+PgDn
Pre	evious Screen	Displays the previous screen.	Shift+PgUp
Ne	xt Screen	Displays the next screen.	Shift+PgDn
Pre Pa	evious Frame ge	Displays the previous frame page.	PgUp
Ne	xt Frame Page	Displays the next frame page.	PgDn
Sh	ow Address		
	Show Symbol Name	Switches to functional object display showing symbol names.	
	Show Address	Switches to functional object display showing addresses.	
	Show I/O Comment	Switches to functional object display showing I/O comments.	
	Hide	Switches to functional object display hiding addresses.	
Sh	ow ID	Displays and hides ID numbers for objects.	
Simulate ON/OFF		Switches ON and OFF display for functional objects.	
Show Sheet Object		Displays and hides objects registered in sheets.	
Gri	d	Sets the grid.	
Sh	ow Touch Points	Displays and hides PT touch points.	
Zo	om	Zooms the display in and out.	
Refresh		Redraws the screen.	F9

### PT Menu

Command		Function	Shortcut keys
Tra	nsfer		
	Quick transfer (Computer $\rightarrow$ PT)	Compares project data with data in the PT and transfers only refreshed data to the PT.	Ctrl+Q
	Transfer (Computer $\rightarrow$ PT)	Transfers all project data to the PT.	Ctrl+B
	Transfer (PT $\rightarrow$ Computer)	Uploads the project data stored in the PT to the computer.	Ctrl+Shift+B
	Transfer Setting	Sets the communications path to be used in the transfer.	Ctrl+Alt+B
	Transfer Pro- gram	Starts the tool for transferring project data cre- ated on the CX-Designer to the PT or receive project data from the PT to the CX-Designer.	Ctrl+I
Sys	stem Setting	Sets the PT operating parameters. (This is the same as double-clicking <i>System Setting</i> on the project workspace System Tab Page.)	
Pro	ject Properties	Sets the project properties. (This is the same as double-clicking <b>Project Properties</b> on the project workspace System Tab Page.)	
Communication Setting		Registers hosts and sets communications conditions. (This is the same as double-click- ing <i>Communication Setting</i> on the project workspace System Tab Page.)	
Alarm/Event Setting		Registers and corrects alarms and events. (This is the same as double-clicking <i>Alarm/</i> <i>Event Setting</i> on the project workspace Com- mon Setting Tab Page.)	
Dat	ta Log Setting	Registers and corrects the data log function. (This is the same as double-clicking <b>Data Log</b> <b>Setting</b> on the project workspace Common Setting Tab Page.)	
Broken-line Graph Group Setting		Registers and corrects broken-line graph groups. (This is the same as double-clicking <b>Broken-line Graph Group Setting</b> on the project workspace Common Setting Tab Page.)	
Dat	ta Block Setting	Registers and corrects data blocks.	
		(This is the same as double-clicking <b>Data</b> <b>Block Setting</b> on the project workspace Com- mon Setting Tab Page.)	
Document Table Setting		Used to register or correct document files dis- played for document display objects. Used only with NS-Runtime.	
String Table Setting		Used to register or correct character strings in character tables. (This is the same as double- clicking <i>String Table Setting</i> on the project workspace Common Setting Tab Page.)	

Command	Function	Shortcut keys
Password	Sets the password. (This is the same as double-clicking <i>Password Setting</i> on the project workspace Common Setting Tab Page.)	
Unit/Scale	Sets the units and scales used by numeral objects. (This is the same as double-clicking <i>Unit/Scale Setting</i> on the project workspace Common Setting Tab Page.)	
Dialog Setting	Sets the dialog displayed when functional objects are pressed.	
Flicker	Sets flicker settings for each screen or sheet.	
Color Transparent	Sets transparent colors for bitmap files set in the project.	
Screen/Sheet Properties	Sets the screen properties.	
Change Input Order	Sets the order for shifting the focus for numeral and text input objects on the screen.	
Edit Contents	Sets switching the contents of individual screens and sheets.	
Object Properties	Sets the properties for the currently selected functional object.	Enter
Edit Label	Enables direct editing of functional object labels on the screen without opening a prop- erty dialog box.	Space

### **Functional Objects Menu**

Command	Function	Shortcut keys
ON/OFF Button	Starts creation of an ON/OFF button.	
Word Button	Starts creation of a word button.	
Command Button	Starts creation of a command button.	
Bit Lamp	Starts creation of a bit lamp.	
Word Lamp	Starts creation of a word lamp.	
Multifunction	Starts creation of a Multifunction Object.	
Label	Starts creation of text.	
Numeral Display & Input	Starts creation of a Numeral Display & Input Object.	
String Display & Input	Starts creation of a String Display & Input Object.	
List Selection	Starts creation of a List Selection object.	
Thumbwheel Switch	Starts creation of a thumbwheel switch.	
Analog Meter	Starts creation of an analog meter.	
Level Meter	Starts creation of a level meter.	
Broken-line Graph	Starts creation of a broken-line graph.	
Bitmap	Starts creation of a bit map.	
Alarm/event Display	Starts creation of an alarm/event display object.	
Alarm/Event Sum- mary & History	Starts creation of an alarm/event summary & history object.	
Date	Starts creation of a date object.	
Time	Starts creation of a time object.	
Data Log Graph	Starts creation of a data log graph.	
Data Block Table	Starts creation of a data block table.	
Video Display	Starts creation of a video display object.	

Command	Function	Shortcut keys
Temporary Input	Starts creation of a temporary input.	
Consecutive Line Drawing	Starts creation of a continuous line.	
Document Display	Selects document display and starts creation of a screen. Document display is supported for NS-Runtime only.	
Contents Display	Starts creation of a contents display.	
Frame	Starts creation of a frame region.	
Table	Starts creation of a table on a table creation screen.	

### **Fixed Objects Menu**

Command	Function	Shortcut keys
Rectangle	Starts creation of a rectangle.	
Circle•Oval	Starts creation of a circle or oval.	
Straight Line	Starts creation of a straight line.	
Polyline	Starts creation of a continuous straight line.	
Polygon	Starts creation of a polygon.	
Sector	Starts creation of a pie-shaped sector.	
Arc	Starts creation of an arc.	

#### **Tools Menu**

Command		Function	Shortcut keys
Test		Performs an operating test on the computer. The test can be performed while connected to either the CX-Simulator (virtual PLC) or an actual PLC. (CX-Designer version 2.0 or higher.)	Ctrl+T
PLO	C Error Simulator	Starts the PLC error simulator. For details on the PLC error simulator, refer to the <i>CX-Pro-gramer Operation Manual</i> (Cat. No. W446).	
Re	source Report	Displays a report on the resources that have been used.	
Val	idation		
	Validation (Project)	Checks all screen data in the project accord- ing to validation settings to see if any mistakes have been made.	Ctrl+E
	Validation (Current Screen)	Checks screen data displayed at the front according to validation settings to see if any mistakes have been made.	Ctrl+Shift+E
	Validation Setting	Sets the project data check items.	Ctrl+Alt+E
DX	F Explorer	Starts the tool for accessing DXF files using the CX-Designer.	
Library		Displays the Library Window to enable pasting objects registered in the library on the screen. Also enables registering objects on the screen in the library.	Alt+4
Import Old Library		Converts a library created on CX-Designer for use with CX-Designer.	
Conversion			
	Version	Changes the system version of the project currently being edited.	
	Model	Changes the model of the NS-series PT for the project currently being edited.	

	Command	Function	Shortcut keys
Res	set Defined Defau	lt	
	Functional Object	Resets functional object specified values to default values.	
	Fixed Objects	Resets fixed object specified values to default values.	
Op	tion	Sets optional functions for editing screens.	

#### Window Menu

Command	Function	Shortcut keys
Next Window	Moves to the next window of the windows displayed under <i>View - Window.</i>	Alt+0
Previous Window	Moves to the previous window of the windows displayed under <i>View - Window</i> .	Alt+Shift+0
Close All	Closes all open screen editing windows.	
Cascade	Cascades the screen editing windows.	
Tile	Tiles the screen editing windows.	
Arrange Icons	Arranges the minimized window icons.	
Window List	Lists all open screen editing windows. The front screen will have a check mark by it.	

#### Help Menu

Command	Function	Shortcut keys
Contents	Displays the contents for the online help.	
Search Topic	Displays a search dialog box for help topics.	
Online Registration	Registers the user online.	
About CX-Designer	Displays information on the product.	

### 3-3 User Interface

### 3-3-1 Names of Basic Screen Components

The configuration and names and functions of the components in the CX-Designer operation screen are described here.

**Title Bar** 

The title bar displays the application name, project name, and screen number.

**Project Workspace** 

#### Menu Bar

The menu bar provides groups of related functions.

Each group name is displayed in the menu bar and the functions are displayed on pull-down menus under each group name.

The project screen data and settings are displayed in a tree hierarchy in the project workspace.

Screens and sheets can be created, copied, and deleted in the project work-space.

Screens from different projects can be copied between workspaces if more than one copy of CX-Designer is running at the same time.

The project workspace can be displayed and hidden by selecting *View - Window - Project workspace.* 

A list of the created screens and sheets will be displayed on the Screen/Sheet Tab Page.

The Common Setting Tab Page displays the common settings browsed by all functional objects.

The System Tab Page displays the project and communications settings.

#### Section 3-3

#### **Property List**

Property Lists display the property settings for the functional object selected on the screen. Settings can be checked and changed without opening a Property Setting Dialog Box.

Changes to properties made on the Property List are immediately reflected on the screen, which enables changes to be checked during screen creation.

Property Lists can be displayed and hidden by selecting *View - Window - Property List.* 

#### Global Replace

More than one object can be selected and the common settings for those objects can be changed in one operation.

The following example shows a global change of the object color.

The two objects on the screen for which the color is to be changed are selected and *Color 1* is changed.

objects.

The color for the two selected objects is changed in the one operation.

Screen Creation Window

Status bar

The Status Bar can be displayed and hidden by selecting View - Status Bar.

Screens displayed on the PTs can be created using functional and fixed

Toolbar

Each toolbar can be displayed and hidden according to the settings in the Customize Dialog Box displayed under *View - Toolbar*.

#### ■ File Toolbar

Displays functions relating to file operation, such as creating or saving projects and screens and transferring project data, as icons.

#### Edit Toolbar

Displays functions relating to editing objects, such as copy, cut, and paste as icons.

#### ■ Find Toolbar

Displays functions relating to searching and replacing as icons.

#### ■ <u>Tool Toolbar</u>

Displays frequently used functions from the Tools Menu as icons.

#### ■ <u>Help Toolbar</u>

Displays help and version information functions as icons.

About CX-Designer

#### Functional Object Toolbar

Displays screen creation functions for functional objects as icons.

Select the icon button of the functional object to be used to start screen creation.

Note Document display is supported for NS-Runtime only.

#### Fixed Object Toolbar

Displays fixed object drawing functions as icons.

Select the icon button of the fixed object to be used to start drawing screens.

#### Grouping Order Toolbar

Displays object grouping and change distribution order functions as icons.

#### Edit Objects Toolbar

Displays functions relating to changing object layout and object alignment as icons.

#### Window Display Toolbar

Displays functions for displaying windows as icons.

#### Switch Toolbar

Displays functions for switching labels, screens, and frame pages as icons.

#### View Toolbar

Displays functions for switching the Screen Creation Window display as icons.

#### Font Toolbar

Displays the functions for setting text font properties in functional objects as icons.

#### Color Toolbar

Displays the color settings for functional objects and fixed objects as icons.

#### Address Toolbar

Displays the setting functions for the addresses of the functional objects in a toolbar. Select the functional object for which the address is to be set and set the address.

#### Edit Contents Toolbar

Sets the basic contents change settings required for using the Machine Navigator. By changing the contents number, the display can be changed to the contents set for that contents number.

Click the Edit Contents Button to display the Edit Contents Dialog Box. Detailed settings can then be made for changing contents.

.. . .

.

		Addres	ss for s	switching contents	Edit Co	ntents Button
Contents No. 0	No of contents 1	Address for switching contents			Setting	Edit Contents
Contents No.	No. of contents					

. . .

No. of contents

**Output Window** 

The Output Window displays various data such as CX-Designer search, data check, and other processing results and error details.

The Output Window can be displayed and hidden by selecting View - Window - Output Window.

The Output Tab Page displays the CX-Designer operating status and error information.

×	SERIALA:0C010 - Address input format is not correct. Input address again using correct format and applicable type (bit, word, etc).

### 3-3-2 CX-Designer Functions and Screens

#### Symbol Table

A symbol table lists the symbols registered to the project.

The CX-Designer can specify symbols as the data to be accessed by functional objects, in addition to directly specifying PLC or other host addresses or internal memory.

"Symbol" is a name to which an address is allocated. This symbol can be used instead of the address in the CX-Designer. This allows addresses to be changed simply by changing the address set for the symbol, instead of opening each screen and changing the property settings for the functional objects on that screen. In addition, comments can be specified for symbols in the CX-Designer.

The Symbol Table Window can be displayed and hidden by selecting *View - Window - Symbol Table* from the menu bar.

display order	Symbol Table				
between	Add	Find Find Unu	sed Symbols	Prev. Next	Clear search i

	SERIALA	AmberOnlyTimerDone	BOOL	TU00004	
	SERIALA	AmberTimerDone	BOOL	TU00002	
	SERIALA	GreenLight	BOOL	00010.02	Go
Jlick to display a	SERIALA	GreenLightTimer	CHANNEL	00003	Timer for the green light period
ull down list and	SERIALA	GreenTimerDone	BOOL	TU00003	
Juii-down list and	SERIALA	RedLight	BOOL	00010.00	Stop
licplay only the	SERIALA	RedLightTimer	CHANNEL	00001	Timer for the red light period
lispidy of ity the	SERIALA	RedTimerDone	BOOL	TU00001	

#### Note

- (1) Symbols can be added or deleted and functions that use a symbol can be searched for in the symbol table.
  - (2) Symbols (communications addresses) to be set can be copied from the symbol table to the Property List using the drag-and-drop function.
  - (3) Symbols can also be copied from the CX-Programmer's symbol table and pasted to the CX-Designer's symbol table. This enables the same symbol to be used by both the CX-Designer and CX-Programmer.

#### **Library Window**

A library object is a group of registered functional and fixed objects together with their property settings registered as one unit of data.

Objects can be registered as a library object and easily reused in multiple locations or screens from the Library Window.

The Library Window can be displayed and hidden by selecting *View - Win-dow - Library.* 

Objects can be easily registered and reused, using the drag-and-drop function.

#### **Object List Window**

The Object List Window lists the functional objects located in Screen Creation Window.

Any object can be selected and the display on the Screen Creation Window can be restricted to a specified type of functional object from the Select Object Window.

Selecting and displaying objects by type enables easy editing of objects hidden under other objects. Normal screen editing is also possible in this mode.

The Select Object Window can be displayed and hidden by selecting *View - Window - Object List.* 

Screen Creation Window

Lists objects on the screen.

Select Object Screen

Select only *Label* to display labels that were hidden under other objects. Labels can also be edited in this mode.

Address in Use List

Displays a list of the number of times each address is used in functional objects.

A list of the functional objects using the addresses is also displayed in the Output Window and specified functional objects can be selected on the screen.

The Address in Use Window can be displayed and hidden by selecting *View - Window - Address in Use List.*

## SECTION 4 Useful Functions

This section describes useful CX-Designer functions for creating project data and debugging and how to use these functions.

4-1	Creatin	g Screens Using Symbols
	4-1-1	Changing Allocated Addresses
	4-1-2	Reusing Existing Projects in Another System
	4-1-3	Copying and Pasting Symbols Between the CX-Programmer and the CX-Designer.
	4-1-4	Using I/O Allocation Table in Symbol Table
	4-1-5	Creating Screens Using Symbol Names and Then Setting Addresses
4-2	Using S	Screens from Other Projects
4-3	Classify	ying Screens by Application
	4-3-1	Creating Categories
	4-3-2	Moving Screens between Categories
	4-3-3	Creating New Screens.
4-4	Checkin Propert	ng and Changing Functional Object Properties without Opening y Setting Dialog Boxes
	4-4-1	Globally Replacing Settings for More Than One Object
4-5	Listing	and Editing Functional Object Properties
	4-5-1	Setting Consecutive Addresses
	4-5-2	Copying the Same Setting to More Than One Cell
4-6	Editing	Overlapping Objects
	4-6-1	Method for Selecting Specified Objects
	4-6-2	Displaying Only Specified Objects on a Screen
4-7	Creatin	g Multi-language Labels
4-8	Checkin	ng Address Usage Status
4-9	Searchi	ng for Embedded Macros
4-10	Transfe	rring Only Edited Data to PT
4-11	Creatin	g Documents
4-12	How to	Use Help
4-13	Integrat	ted Simulation for the Entire System
	4-13-1	Debugging Screens and the User Program with a Virtual PLC
	4-13-2	Debugging Screens and the User Program with the Actual PLC
4-14	Setting	Security for Data Transfers with the PT
4-15	Setting	Symbol Names and I/O Comments for Use as Labels
4-16	Executi	ng Multiple Functions with a Single Operation
4-17	Replaci	ng a Lamp with a Button
4-18	Creatin	g Polygonal Lamps
4-19	Registe	ring Contents
4-20	Using N	Machine Navigator

## 4-1 Creating Screens Using Symbols

The CX-Designer can enter addresses as symbols when setting functional object addresses. (Addresses can also be directly input, the same as for the NS-Designer. Symbols are automatically allocated in these cases.)

This means that all addresses used in a project can be managed from the symbol table.

The following operations can be performed easily using the symbol table.

- Changing allocated addresses when the address allocation changes suddenly.
- Reusing existing projects in another system.

Symbols can also be copied and pasted between the CX-Programmer and CX-Designer symbol tables.

Also, any I/O allocation table created using Excel or other software can be used as is in symbol tables.

### 4-1-1 Changing Allocated Addresses

If an address allocated for a symbol is changed on a symbol table, the change is automatically reflected in all screens.

This allows allocated addresses to be changed simply by changing the symbol table, instead of opening each screen and changing the property settings for the functional objects on that screen.

There is flexibility with symbol changes to meet any requirement. The replace function can be used to globally replace the host and addresses. Symbols can also be changed individually.

#### Procedure

- 1,2,3...1. Select *Symbol Table* on the project workspace Common Setting Tab Page. The symbol table will be displayed.
  - 2. Double-click the symbol for which the allocated address is to be changed in the symbol table.
  - 3. Change the allocated address in the displayed Address Settings Dialog Box.

4. When the changes have been completed, they will be reflected in all functional objects that use that symbol.

### 4-1-2 Reusing Existing Projects in Another System

When using existing projects in another system, the addresses allocated for objects can be easily changed simply by changing the addresses in the symbol table.

#### Procedure

- *1,2,3...* 1. Change the allocated address for each symbol in the symbol table.
  - 2. To replace addresses in the symbol table, right-click the mouse and select *Replace* from the pop-up menu that is displayed.

# 4-1-3 Copying and Pasting Symbols Between the CX-Programmer and the CX-Designer

Both CX-Designer and CX-Programmer have symbol tables and can share their symbol data.

This means that CX-Programmer symbols can be copied to the CX-Designer. And symbols added using the CX-designer can be copied to the CX-Programmer.

Name	Data Typ	<ul> <li>Address / Value</li> </ul>	Rack Location	Usage	Contrient

₽

#### Procedure

Copying CX-Programmer Symbols to the CX-Designer

- *1,2,3...* 1. Start CX-Programmer and open the project with the symbol to be shared.
  - 2. Select the symbol from the CX-Programmer symbol table.
  - 3. Open the CX-Designer symbol table and paste the symbol.
  - 4. If a host address is set for the symbol, select the applicable host for the destination.

Host Selection	×
SERIALA	OK
HOST3	Cancel

Copying CX-Designer Symbols to the CX-Programmer

*1,2,3...* 1. Select the symbol from the CX-Designer symbol table and copy it to the CX-Programmer.

Copy the symbol for which a PLC address is allocated and paste it to Excel.

2. Paste to Excel. Select and copy the cells in Excel other than those in the Host column.

3. Open the CX-Programmer symbol table and paste the symbol.

Naras	Det a Type	Achieves ( Value	Racklinstern	Usige	Currient	
-X Facility if inter	MINER				Time for the earlight period	
* P. Cutour, Off, B1	BOOL	ASD0.15		Work.	Output OFF Bit

- P_08	8001	CF114		Herk	Always CITF Flag	\$
· Titope	0001	100.00		Work.	Trager	L
* Operation_Complete_Flag	BOOL	100,01		Work.	Operation Complete Flag	J
•		· · · · ·			10000	đ

The same symbol as the CX-Designer symbol is added.

## 4-1-4 Using I/O Allocation Table in Symbol Table

The user can create the required I/O allocation table when creating projects. If the I/O allocation table is created in the same format as the symbol table, the I/O allocation table data can be copied as is to the symbol table. This enables symbols to be created easily from the I/O allocation table.

#### Procedure

- *1,2,3...* 1. Create an I/O allocation table using Excel. Use the following order in the I/O allocation table: Host, symbol name, type, address, and I/O comment
  - 2. Copy the I/O allocation table.
  - 3. Open the CX-Designer symbol table and paste the symbols.

### 4-1-5 Creating Screens Using Symbol Names and Then Setting Addresses

Screens can be created using only symbol names even if addresses are not set. When the addresses are later determined, they can be input collectively in the symbol table. In addition, if an address allocated as a symbol in the symbol table is changed, that change is reflected in all functional objects where that symbol is set.

#### Procedure

*1,2,3...* 1. Input the symbol names for the communications address setting locations for the functional object.

2. Set or change the addresses for the symbols input from the symbol table in step 1.

3. After the addresses have been set, they will be reflected in all the functional objects that reference the symbols.

## 4-2 Using Screens from Other Projects

Screens from different projects can be copied between project workspaces if more than one copy of CX-Designer is running at the same time.

If there is an alarm/event display object, data log graph, or other functional object on the copied screen that accesses common settings, the common settings are automatically copied as well. This means that settings do not need to be adjusted to use the same common settings in both the source and destination project.

#### Procedure

1,2,3...1. Start two copies of CX-Designer and open the source project on one copy and the destination project on the other copy. Open the project workspace Screen/Sheet Tab Page.

2. Select the screen to be copied on the source CX-Designer and drag-anddrop the screen to the destination category. The dialog box for setting the destination screen number and host will be opened.

3. Specify the destination screen number and the address host in the dialog box. The screen will be copied.

4. The addresses used in the source screen will be automatically copied to the symbol table in the destination project. The common settings accessed by screens are also added automatically.

■ Copying Screens with Alarm/Event Displays

5. Address allocations can be changed from the symbol table to an address suitable for the destination project. (Refer to *4-1 Creating Screens Using Symbols.*)

#### Note

- (1) All screens in a category can be copied by selecting the category and dragging-and-dropping it to another project workspace.
  - (2) Sheets can also be copied using the same method.
  - (3) Common settings can be copied by selecting them on the project workspace Common Settings Tab Page and dragging-and-dropping them to another CX-Designer's project workspace Common Settings Tab Page.

### 4-3 Classifying Screens by Application

Screens can be classified by application in the CX-Designer. These classifications are called "screen categories."

To display screens by screen categories, right-click in the Project Workspace and select **Display Screen Category** from the pop-up menu.

Consecutive screen numbers are automatically allocated in the same category when a new screen is created. The screen numbers can be changed.

the next screen number is allocated to the screen.

### 4-3-1 Creating Categories

- *1,2,3...* 1. Open the project workspace Screen/Sheet Tab Page.
  - 2. Select Screen Category or an existing category.
    - 3. Right-click and select *New Category* from the pop-up menu.

4. A new category will be created. Enter the category name.

### 4-3-2 Moving Screens between Categories

Existing screens can be moved to different categories.

- 1,2,3...1. Select the screen to be moved to a different category from the project workspace Screen/Sheet Tab Page. (More than one screen can be selected.)
  - 2. Drag the screen or screens to the destination category.

**Note** Categories can also be moved by selecting and dragging them to the desired location. Screens in that category are also moved.

#### 4-3-3 Creating New Screens

Screens can be created in a category.

- *1,2,3...* 1. Select the category for the new screen on the project workspace Screen/ Sheet Tab Page.
  - 2. Right-click the screen category and select *New Screen* from the pop-up menu.

# 4-4 Checking and Changing Functional Object Properties without Opening Property Setting Dialog Boxes

Click a functional object on the screen to display the properties of that object in the Property List. Settings can be checked and changed on the Property List without opening a Property Setting Dialog Box.

Settings for more than one object can be changed in the Property List by using the global replace function.

Property List			* X
ON/OFF Button : PB	000	0	
ltem	Ind	Value

Color 2	Г		
General λ Text λ Lav	out/	Frame λ Action λ Macro λ Cor	hmor

**Note** The Property Settings Dialog Box for an object can still be displayed by double-clicking the object.

### 4-4-1 Globally Replacing Settings for More Than One Object

More than one item can be selected and settings common to all items can be changed. The changed settings will be reflected in all selected objects.

#### Procedure

- *1,2,3...* 1. Select all the objects for which settings are to be changed.
  - 2. Change the setting items common to all selected objects on the Property List.

3. The change will be reflected in all objects.

Property List			3	
Bit Lamp : PL0001	Multipl	le Objecta		
Item	Ind	Value	T

Color 4	Г			r
Color S	Г			-
	Г		31	
	Г		911	

Note Items not common to all selected objects cannot be changed.

### 4-5 Listing and Editing Functional Object Properties

Properties of objects on the screen can be displayed in table format and the settings changed.

Settings for more than one object can be changed at the same time and consecutive addresses can be automatically set, making editing more efficient.

#### Procedure

- 1,2,3... 1. Select Edit Edit Properties.
  - 2. The functional objects on the screen and their properties will be displayed. Entries made to each item will be reflected as changes in the functional object.

🧱 Edit Properties								<u>_   X</u>

the list.	elected	Trom		settin Prope	gs displaye erties Wind	ea in the Edit Iow.		

### 4-5-1 Setting Consecutive Addresses

Addresses can be changed to make the address consecutive.

**1,2,3...** 1. Select the cell for the set address and move the mouse to the bottom-right of the cell. When the cursor changes to a + cursor, drag the cursor down or up.

2. The addresses will change to descending order when the cursor is dragged down, and to ascending order when dragged up.

### 4-5-2 Copying the Same Setting to More Than One Cell

Each setting can be copied to other cells for items of the same type.

1,2,3... 1. Select and copy the desired cell.

2. Select the destination cell and paste the copied setting. Copied settings can be pasted to more than one cell, enabling global replacement of settings.

Note

- If an object is selected on the screen, only the properties for the selected functional object are listed.
  - (2) The properties of the following functional objects can be set using the list edit function.
    - ON/OFF Buttons
    - Word Buttons
    - Command Buttons
    - Bit Lamps
    - Word Lamps
    - Text
    - Numeral Display & Input
    - String Display & Input
    - Thumbwheel Switches
    - Dates
    - Time
    - Temporary Inputs
    - Consecutive Line Drawing
    - Multifunction

### 4-6 Editing Overlapping Objects

The CX-Designer has an Object List Function, which lists objects on the screen.

### 4-6-1 Method for Selecting Specified Objects

Specify objects in the Object List Window to have that object selected.

This enables objects hidden under other objects to be selected and for the settings for these objects to be checked and changed on the Property List.

#### Procedure

- 1,2,3... 1. Select View Window Object List.
  - 2. The Object List Window will be displayed and the objects on the screen listed.
    - 3. Objects specified on the Object List Window will be selected on the screen. Hold down the Shift or Ctrl Key to select more than one object. The list of objects in the Object List Window can be restricted to a specific type of object. Select the type of objects to be listed from the drop down list at the top left of the Object List Window.

### 4-6-2 Displaying Only Specified Objects on a Screen

The screen display can also be limited to objects selected on the Object List Window. These objects can be edited on screen.

#### Procedure

- *1,2,3...* 1. Select the object in the Object List Window and click the Range Selection Button.
  - 2. Click the Release All Button to display all objects on the screen.

### 4-7 Creating Multi-language Labels

CX-Designer multi-language displays use Unicode for the character information displayed in a screen. This enables switching the screen between different languages, such as Japanese, English, and Chinese, for display and setting.

The CX-Designer also has functions to export functional object label strings to CSV files and import label strings from CSV files, called the CSV import/ export functions.

These functions can be used to edit and set label strings in multiple languages, such as Japanese, English, and Chinese, making it easy to create multi-language screens. An operating system that supports Unicode (Windows 2000, XP, or Vista) is required to use multi-language labels.

Japanese	-	-		
実行中	停止	待機中	異常発生中	
English				
Runing	Stop	Waiting	Error	The language display can be
Chinese	-			switched during
运行中	停止	等待中	异常发生	

#### Procedure

- 1,2,3... 1. Select File Export to CSV File.
  - 2. Follow the directions in the displayed dialog box and export the labels to a CSV file. Select *Unicode* in the *Output Code* Area.
  - 3. Edit the CSV file with a version of Excel that supports Unicode (Excel 2000 or higher).

PRJ							
Project/Screen No.	Title	Parts ID	Parts Comment	Property	(ТуреО)	(Type1)	(Type2
Screen-0	Screen Page000	PL0003		Caption	異常発生中	Error	异常发生
Screen-0	Screen Page000	PL0002		Caption	待機中	Waiting	等待中
Screen-0	Screen Page000	PL0001		Caption	停止	Stop	停止
Screen-0	Screen Page000	PL0000		Caption	実行中	Runine	运行中
					$ \rightarrow $	$\square$	$\square$

```
Enter the label strings in Japanese, English, Chinese, etc.
```

#### 4. Select File - Import CSV File.

5. Follow the directions in the displayed dialog box and import the edited CSV file.

The strings in the CSV file will be reflected in each object.

- Note
- Set the number of labels to 2 or more under *Project Property* to set multilanguage strings for one object.
  - (2) In order to create screen data with CX-Designer using the multi-language function, it is necessary to perform Windows settings beforehand. Refer to the CX-Designer online help *Reference - Multi-language Display* for details.

### 4-8 Checking Address Usage Status

The Address in Use Window displays a list of the number of times each address is used in functional objects.

A list of the functional objects using the addresses is also displayed in the Output Window and specified functional objects can be selected on the screen.

#### Procedure

1,2,3... 1. Select View - Window - Address in Use.

2. Set the addresses and search range and click the Go Button to display the number of times the addresses are used.

3. Select an address and click the **Find Reference Object** Button to display a list of functional objects using that address in the Output Window. Select a functional object in the Output Window to automatically select that object on the screen.

Search	n Result: 6 ent	ries found				F	ind From:Com	munications AddressRange:Whole Pro
Page	ID	Host	Name	Address	I/O Comment	Label	Object Com	Detailed Information
0001	NUM0067	SERIALA	Status	00000	Status			Numeral Display & Input : Address
0001	PL0068	SERIALA	Running	00000.00	Running			Bit Lamp : Display Address
0002	PLOOOQ	SERIALA	Running	00000.00	Running			Bit Lamp : Display Address
0002	NUM0001	SERIALA	Status	00000	Status			Numeral Display & Input : Address
0003	NUM0009	SERIALA	Status	00000	Status			Numeral Display & Input : Address
0050	NUM0001	SERIALA	Status	00000	Status			Numeral Display & Input : Address
2								

Objects selected in the Output Window are selected on the screen.

Note

te Searches can be made for the addresses used in a project or in a screen and the results displayed in a list. Select *Find - Address Cross Reference.* 

### 4-9 Searching for Embedded Macros

Embedded macros can be found and displayed in the Output Window.

Objects selected in the Output Window are automatically selected, so macro details can be checked on the Property List.

#### Procedure

- 1,2,3... 1. Select Find Macro Cross Reference.
  - 2. Specify the search range in the displayed Search Embedded Macro Dialog Box and execute the search.
  - 3. A list of macro locations will be displayed in the Output Window.

### 4-10 Transferring Only Edited Data to PT

The data is edited and transferred to the PT many times when debugging projects.

The CX-Designer has a Quick Transfer function. The Quick Transfer function automatically compares project data with the data already transferred to the PT and transfers only changed data.

This means that only the required data is transferred to the PT, which greatly reduces the time and work required for transfers.

#### Procedure

#### 1,2,3... 1. Select PT - Transfer - Quick Transfer [Computer $\rightarrow$ PT].

- 2. A dialog box to confirm the transfer will be displayed. Press the Yes Button to start transferring the data.
- Note (1) Transfer routes and other settings need to be made before executing Quick Transfer. Select *PT - Transfer - Transfer Setting* to make the settings.
  - (2) Select *PT Transfer Transfer [Computer → PT]* to transfer data for the whole project to the PT.

### 4-11 Creating Documents

Project and screen settings and functional object property settings can be output to RTF files by using the CX-Designer print function.

Screen images can also be output to bmp and jpg files.

The CX-Designer print function facilitates the production of a variety of documents, e.g., these files can be used as is for specifications, or the data can be processed to create operation manuals, etc.

2. When printing is executed, an RTF or bmp/jpg file is created.

Note

- (1) If *Output to:* is set to *Printer*, the settings will be output to the printer.
- (2) If *Output to:* is set to *File* or *Printer*, header, footer, and margin settings can be made.

### 4-12 How to Use Help

Press the **F1** Key or click the **Help** Button in dialog boxes to display help information relating to the selected menu or dialog box.

System Setting	1

---	--

Press the **F1** Key or click the **Help** Button on the History Tab Page of the System Setting Dialog Box.

A description of the History Tab Page of the System Setting Dialog Box will be displayed.

#### Procedure

Click on the diagram in Help Mode to display a description or switch to another topic.

If the mouse is moved to locations that can be clicked in Help Mode, the cursor will change shape to  $\sqrt[h_{1}].$ 

If there is a tab page in the explanatory dialog box, the Help diagram display can be switched by clicking that tab page.

### 4-13 Integrated Simulation for the Entire System

The CX-Designer can simulate PT operations on a personal computer, so screens created on the computer can be debugged using the test function even without transferring the screens to a PT.

### 4-13-1 Debugging Screens and the User Program with a Virtual PLC

The CX-Designer can connected to a virtual PLCs running on the CX-Simulator (i.e., on a user program execution engine). By using the CX-Simulator to run programs created using the CX-Programmer, screen data and user programs can be debugged together on a personal computer.

Test function when connected to the CX-Simulator

#### Procedure

- 1,2,3... 1. Click the PLC-PT Integrated Simulation Button (1) in the Tool Bar.
  - Specify the host name to connect to the CX-Simulator, select the user program (CXP file) to be written, and click the Start Button.

PLC-PT Integrated	Simulation	X	
H <u>o</u> st Name	SERIALA	Browse	Specify the host name to connect to the CX- Simulator, and specify the
Select a host other hosts ru	to execute using the simulator, and a CX-Programmer n in normal test mode.	project file. The	(i.e., specify the CXP file).
	Start	Cancel	

- 3. The CX-Simulator and the CX-Programmer will start, and the user program will be written to the CX-Simulator.
- 4. The CX-Designer test function will start, and the specified host will be connected to CX-Stimulator.
- 5. When the user program is executed or debugged (step, scan execution, etc.), the applicable host communications addresses are changed according to the user program execution results, and this is reflected in the lamps on the screen and in the numeric displays. Conversely, applicable host communications address values are changed according to screen button operations and numeric inputs, and these are used as inputs for user program execution. This enables the simulation of screen operations in conjunction with virtual PLC user program execution.

Note

- If a test is performed from the CX-Designer while the CX-Simulator is already running, a connection will be made to the CX-Simulator.
- (2) Only one host can be connected to the CX-Simulator. If multiple hosts are set in a CX-Designer project, use the test tool to change the communications address values for the hosts that are not connected to the CX-Simulator.

All of the communications address used by the displayed screen are displayed in a list. For example, if host SERIALA is connected to the CX-Simulator, the SERIALA communications addresses are used as values at the CX-Simulator. The values for other host communications addresses can be changed using the test tool.

- (3) Address values at the CX-Simulator can be changed using the Switch Box Utility. The Switch Box Utility can be started from the test tool.
- (4) The CX-Designer will be minimized when the test is started.
- (5) If the Start test from the current screen Option is selected under Tools - Test, the screen currently being edited will be opened when the test is started. If this option is not selected, the test will start with the initial screen specified in the PT's System Settings.
- (6) Integrated simulation can be executed by selecting *Tools Test* and then selecting *Connect to CX-Simulator* from the Test Dialog Box.

### 4-13-2 Debugging Screens and the User Program with the Actual PLC

With CX-Designer, simulation can be executed with the personal computer connected to an actual PLC. This enables debugging (including monitoring and settings) using actual I/O Units, Special I/O Units, and CPU Bus Units connected to the PLC, as well as data from external devices and PLC data on the network.

Test function when connected to actual PLC

#### Procedure

- *1,2,3...* 1. Connect the personal computer to the PLC by either a serial or network connection.
  - 2. Select Tool Test.
  - 3. Select *Connect to PLC*, specify the host name and host type for connecting to the PLC, specify the communications method, and click the **Start** Button.

- The CX-Designer test function will start and the actual PLC will be connected.
- 5. When the actual PLC user program is executed, the applicable host communications addresses are changed according to the user program execution results, and this is reflected in the lamps on the screen and in the numeric displays. Conversely, applicable host communications address values are changed according to screen button operations and numeric inputs, and these are used as inputs for execution of the actual PLC user program. This enables the simulation of screen operations in conjunction with actual PLC user program execution.

### 4-14 Setting Security for Data Transfers with the PT

Transfers between the Computer and PT When a project for which data transfer security has been set is stored in the PT, a password is required to upload the project data from the PT. Data cannot be uploaded from the PT unless the correct password is input, preventing theft of data from the PT. A password is also required in order to download data. This prevents data from being accidentally overwritten.

password is input.

## Transfers between the PT and a Memory Card

When a project for which data transfer security has been set is stored in the PT, a password must be input at the PT to upload the project data from the PT to a Memory Card. Data cannot be uploaded from the PT unless the correct password is input, preventing theft of data to a Memory Card. A password is also required to download data from a Memory Card. This prevents data from being accidentally overwritten.

#### Procedure

- 1,2,3...1. Select File Data Transfer Security New Data Transfer Security Setting.
  - 2. Set the security password.
  - 3. Transfer to the PT the project for which data transfer security has been set.

### 4-15 Setting Symbol Names and I/O Comments for Use as Labels

Symbol names or I/O comments of communications addresses can be automatically used as label text strings for the following functional objects.

- ON/OFF Buttons (when Write Address is set)
- Word Buttons (when Write Address is set)
- Bit Buttons (when Display Address is set)
- Word Lamps (when Display Address is set)

In the same way, when setting communications addresses in the Alarm/Event Details Dialog Box, symbol names or I/O comments can be set as the alarm messages.

The symbol name of the communications address is automatically used as the label.

#### Procedure

- 1,2,3...1. Select **Options** from the Tools Menu. The Option Dialog Box will be displayed.
  - 2. Open the Edit/Display Tab Page in the Option Dialog Box.
  - 3. Select *Reflect to label when an address is set,* and select either *Symbol Name* or *I/O Comment* for the label text string.

Select the option, and select either *Symbol Name* or *I/O Comment* for the label text string.

- 4. Create the functional object.
- 5. Set the communications address for the functional object in one of the following ways.
  - Input the address in the field in the Property Setting Dialog Box for the functional object.
  - Input the address in the field in the Property List.
  - Use the Address Tool Bar.
  - Edit the properties in table format.

The symbol name or I/O comment that has been set will be automatically set as the label text string.

- To set an alarm message, select *Alarm/Event Setting* from the PT Menu. The *Alarm/Event* Setting Dialog Box will be displayed.
- Click the *Add/Edit* Button in the dialog box to open the Alarm/Event Details Tab Page.
- 8. Set the communications address in the Address Field. The symbol name or I/O comment for the communications address that was set for the message will be used automatically.
- Note (1) If there are two or more labels, the symbol name or I/O comment will be set for the text strings for all of the labels.
  - (2) Symbol names and I/O comments will not be set automatically in the following cases:
    - When the communications address is replaced by another one.
    - When a symbol name or I/O comment is changed in the symbol table after the label text string has been set.
    - When communications address settings other than those indicated above are set.
    - When the communications address is set by a method other than those indicated in step 5.

### 4-16 Executing Multiple Functions with a Single Operation

With Multifunction Objects, multiple processes can be set and can then be executed with just the press of a button. Processes that could previously be executed only by using macros can now be easily executed by making settings based on properties.

Procedure

This procedure describes how to use a Multifunction Object to perform the following operations.

- Turn ON \$B100.
- Set SERIALA:DM0 to 123.
- Switch to screen 100.
- *1,2,3...* 1. Create a Multifunction Object and open the Property Setting Dialog Box.
  - 2. In the General Tab Page, open the When pressing Tab Page and select the first item in the action item list.
  - 3. Click the **Write** Button and select **Write Bit** from the menu. The properties for the bit setting will be displayed.
  - 4. Set \$B100 for the write address, and SET for the action.

Classing to the first ite     Sector Obect Special     Sector Obec
1. Click the first ite     2. Click the Write B     and select Write     Acten     Memerican     3. Make the follow     • Write Address
Action: SET

- 5. Click the **Add** Button to add the new action item.
- 6. Click the Write Button and select Write Word from the displayed menu.
- 7. Set *SERIALA: DM0* for the write address, *Set Value* for the action, and *123* for the set value.

#### Section 4-16

Click the Switch Screen Button, and select Switch Screen.     3. Make the following settings: • Switch Method: Specified Screen • Select Screen: 0100 Screen

When the Multifunction Object is pressed on the NS-series PT, the functions that have been set will be executed in order.

### 4-17 Replacing a Lamp with a Button

If a bit lamp is converted to a Multifunction Object, the functions of a button and other functions can be added by simply changing property settings without creating new objects.

Similarly, converting to a Multifunction Object makes it easy to add new functions to buttons and lamps that have already been created.

#### Procedure

- 1,2,3...
  - 1. Open the Bit Lamp Property Setting Dialog Box.
    - 2. Click the **Convert** Button to convert the bit lamp to a Multifunction Object.

3. The property settings for the Multifunction Object will open automatically. In the General Tab Page specify Perform an action when pressing the object option to set the function for when the Multifunction Object is pressed.

Section 4-17

In the Color/Shape Tab Page, the same settings will be set as for the original bit lamp.

Shape type	Shepe type	Shepe type		
Frame	Select Shape			
OFF Color	Single-Ined Dide			
UN COR	( Double-lined Circ)	e		
	Double-InedRed	Do the lead Bectange

	0.010 MP7 (0.000 Jak	5		
	Unplay/Hide	le contra de la co	4	
	Sglecton	Display 2		
			10,6101	

The settings will be the same for the Multifunction Object as for the bit lamp before the conversion.

Note

te The following functional objects can be converted to Multifunction Objects: ON/OFF buttons, word buttons, command buttons, bit lamps, and word lamps.

### 4-18 Creating Polygonal Lamps

Polygonal lamps can be created by using Multifunction Objects. This example procedure shows how to create a polygonal lamp that is turned ON and OFF by turning ON and OFF HOST1:0.0.

Procedure

1,2,3...

 Create a Multifunction Object and open the Property Setting Dialog Box. The General Tab Page will be displayed. 2. Open the When pressing Tab Page in the action item list. Clear the selection of the *Perform an action when pressing the object* option.

Dbiest Comment		
Accigi Deletegi + +	Sector Dipert

	DisplayMide Sglecton Display 🗶	

4. Click the **OK** Button to close the Property Setting Dialog Box. The shape of the Multifunction Object will change to a polygon. The object will be displayed as a pentagon.

5. Change the shape of the Multifunction Object to a triangle by deleting the two unnecessary nodes.

With the Multifunction Object selected, select *Edit Node* from the Edit Menu. Hold down the **Ctrl** Key, move the cursor to the node that is to be deleted, and click the mouse button when the shape of the cursor changes to an X. The node will be deleted.

In the same way, delete the other node to change the shape to a triangle.

Note

- (1) When using *Edit Node* from the Edit Menu, nodes can be dragged to change their positions. It is also possible to add nodes by clicking on the outline while holding down the **Ctrl** Key.
  - (2) When a Multifunction Object set as a polygon is registered as the default shape, then when subsequent Multifunction Objects are created it will be possible to specify the positions of their nodes just as when creating a polygon.
  - (3) Sector lamps can be created in the same way. For a sector lamp, just select *Sector* as the shape in the Property Setting Dialog Box for the Multifunction Object.

### 4-19 Registering Contents

Character strings and image files displayed using Machine Navigator are called "contents." Machine Navigator changes values for specified communications addresses and the displays of contents registered on the screen according to alarms and events that occur. This section describes how to easily register contents.

*1,2,3...* 1. Create the required number of contents displays on the screen.

2. In the General Tab Page in the contents display Property Setting Dialog Box, specify whether character strings or images are to be displayed.

Contents Display - CNT0000		×
Contents Display - CNT0000 General Display Setting Vertical Scroll Bar Horizontal Scroll Bar F Object Comment Select C Display a string Display an image	Tame   Flicker   Control Flag   Size/Position	Specify whethe character strings or images are to be displayed.
⊂ Use As <u>D</u> efault ✓ Disolav Extension Tabs Δρρίγ	OK Cancel Help	

3. Set the number of contents in the Edit Contents Toolbar. In the *No. of contents* field, set the total number of character strings and images to be displayed. In the *Address for switching contents*, set the communications address for switching the contents.

4. In the *Contents No.* field in the Edit Contents Toolbar, input the number of the contents to be edited.

Select the contents display and press the Space Key.
 If it is a character string that is to be displayed, input the character string.
 If it is an image that is to be displayed, the File Selection Dialog Box will be displayed.

- 6. Repeat steps 4 and 5 as required for the number of contents being created.
- **Note** Make detailed settings for the contents in the Edit Contents Dialog Box that is displayed when the **Edit Contents** Button is pressed in the **Edit Contents** Toolbar.

### 4-20 Using Machine Navigator

The countermeasures for when an alarm occurs can be automatically displayed using the Machine Navigator function.

The Machine Navigator function changes the character-string and image displays registered on the screen when the value of a specified communications address changes or an alarm or event occurs.

**NS-series PT** 

This section describes how to create the following screen data.

- Registering HOST1:100.00, HOST1:100.01 as an alarm
- Displaying popup window 100 when an alarm occurs
- Displaying the countermeasure for the alarm on popup window 100, and not displaying anything when no alarm occurs
- Creating the Popup Window
- 1. Create popup window 100.
- 2. Set up two contents displays in popup window 100: one for text and one for images. In the General Tab Page in the Contents Display Property Setting Dialog Box, set *Display a string* and *Display an image*.

Central Staglar Strategy  Sentral Staglar Strategy  Sentral Staglar Strategy  Sentral Staglar Strategy  Sentral  Country Insue Trained Trained Trained Trained Trained  Sentral  Country Strategy  Country Strate	— Select the <i>Display a string</i> option.

Contents No 🕕 🚽	No of contents 1	Address for switching contents	Cattin	a Edit Contente	I.
		Address for switching contents	Jean		1

4. The Edit Contents Dialog Box will be displayed. Make the settings for switching contents. (If the settings shown in the figure on the next page are not displayed, click the dialog box title displayed at the upper left of the dialog box.)

77

- Set *No. of contents* to 3. (The 3 represents two states in which an alarm occurs and one state in which no alarm occurs.)
- Select Switch contents linking with alarm. (Default: Selected)
- Set Contents No. when alarm does not occur to 0.
- Set Address for switching contents to \$W100.

- e. Click the OK Button to close the Alarm/Event Details Dialog Box.
- f. Click the **OK** Button to close the Alarm/Event Setting Dialog Box.
- 7. The settings are now complete. Transfer the project data to the NS-series PT.

Using the Machine Navigator function, popup screen 100 will be displayed when HOST1:100.00 turns ON at the PT, and the contents of contents No. 1 will be displayed.

Similarly, popup screen 100 will be displayed when HOST1:100.01 turns ON at the PT, and the contents of contents No. 2 will be displayed.

Popup screen 100 is automatically displayed, and contents related to the alarm are displayed in the contents display.

**Note** Character strings and image files can be set by selecting the contents display and pressing the **Space** Key.

In addition, specifying a contents number in the Edit Contents Toolbar will cause the contents for that number to be displayed. This makes it possible to set character strings and image files for individual contents numbers without having to open the Edit Contents Dialog Box.

The Edit Contents Dialog Box can also be displayed by selecting *PT* - *Edit Contents*.

# Appendix B Shortcut Keys

The following tables list the shortcut keys that can be used with CX-Designer.

Menu	Function	Shortcut Keys				
File	Open Screen	Ctrl+O				
	Save All	Ctrl+S				
	New Screen	Ctrl+N				
	Save Screen/Sheet	Ctrl+Shift+S				
	New Sheet	Ctrl+Shift+N				
	Apply Sheet	Ctrl+J				
	Print	Ctrl+P				
Edit	Undo	Ctrl+Z				
	Redo	Ctrl+Y				
	Cut	Ctrl+X, Shift+DEL				
	Сору	Ctrl+C				
	Paste	Ctrl+V, Shift+Ins				
	Delete	DEL				
	Group	Ctrl+G				
	Ungroup	Ctrl+U				
	Up	$\uparrow$ (when object is selected)				
	Down	$\downarrow$ (when object is selected)				
	Left	$\leftarrow$ (when object is selected)				
	Right	$\rightarrow$ (when object is selected)				
	One dot shift	Shift + $\uparrow$ , $\downarrow$ , $\rightarrow$ , or $\leftarrow$ (when Snap to Grid is selected)				
	All Objects	Ctrl+A				
	Same Type Objects	Ctrl+D (when object is selected)				
	Repeat	Ctrl+W				
	Edit Properties	Ctrl+L				
Find	Find	Ctrl+F				
	Replace	Ctrl+H				
	Address Cross Reference	Ctrl+R				
View	Project Workspace	Alt+1				
	Symbol Table	Alt+2				
	Property List	Alt+3				
	Library	Alt+4				
	Select Object	Alt+5				
	Address in Use List	Alt+6				
	Output Window	Alt+7				
	Previous Label	Ctrl+PgUp				
	Next Label	Ctrl+PgDn				
	Previous Screen	Shift+PgUp				
	Next Screen	Shift+PgDn				
	Previous Frame Page	PgUp (when frame is selected)				
	Next Frame Page	PgDn (when frame is selected)				
	Refresh	F9				

#### Shortcut Keys

Menu	Function	Shortcut Keys				
PT	Quick transfer (Computer $\rightarrow$ PT)	Ctrl+Q				
	Transfer (Computer $\rightarrow$ PT)	Ctrl+B				
	Transfer (PT $\rightarrow$ Computer)	Ctrl+Shift+B				
	Transfer Setting	Ctrl+Alt+B				
	Transfer Program	Ctrl+I				
	Object Properties	Enter (when functional object is selected)				
	Edit Label	Space (when functional object with label setting is selected)				
Tool	Test	Ctrl+T				
	Validation (Project)	Ctrl+E				
	Validation (Current Screen)	Ctrl+Shift+E				
	Validation Setting	Ctrl+Alt+E				
	Library	Alt+4				
Window	Next Window	Alt+0				
	Previous Window	Alt+Shift+0				

# **Appendix C**

### **Exchanging Data between NS-series Products**

The following tables show the data compatibility between different versions of NS-series products.

### Hardware and System Programs

The versions of the system program that can be installed in the PT vary with the model. The possible combinations are shown in the following table. Use a system program that can be installed for the hardware used.

Item	NS12/NS10/NS7	NS12-V1/NS10-V1/ NS8-V1/NS5-V1	NS12-V2/NS10-V2/ NS8-V2/NS5-V2	NSJ12/10/8/5 NSH5	
System Program Ver. 1.X	Yes	No	No	No	
System Program Ver. 2.X	Yes	No	No	No	
System Program Ver. 3.X	Yes	No	No	No	
System Program Ver. 4.X No		Yes (Not for NS5-V1)	es (Not for NS5-V1) No		
System Program Ver. 5.X	No	Yes	No	No	
System Program Ver. 6.0 No		Yes	No	No	
System Program Ver. 6.2	No	Yes	Yes	No	
System Program Ver. 6.5	No	No	No	Yes	
System Program Ver. 6.6	No	Yes	Yes	Yes	
System Program Ver. 7.0	No	Yes	Yes	Yes	

Yes: Can be installed, No: Cannot be installed

### **System Programs and Screen Data Versions**

The versions of screen data that can be used on the PT depend on the version of the system program installed there. The "screen data version" is the version of the program selected when screen data is created on CX-Designer. The combinations that can be used on the PT are shown in the following table. Screen data versions are upwardly compatible.

ltem		System program									
		Ver. 1.X	Ver. 2.X	Ver. 3.X	Ver. 4.X	Ver. 5.X	Ver. 6.0	Ver. 6.2	Ver. 6.5	Ver. 6.6	Ver. 7.0
Screen	Ver. 1.X	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes
Data	Ver. 2.X	No	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes
VEISIONS	Ver. 3.X	No	No	Yes	Yes	Yes	Yes	Yes	No	Yes	Yes
	Ver. 4.X	No	No	No	Yes	Yes	Yes	Yes	No	Yes	Yes
	Ver. 5.X	No	No	No	No	Yes	Yes	Yes	No	Yes	Yes
	Ver. 6.0	No	No	No	No	No	Yes	Yes	No	Yes	Yes
	Ver. 6.2	No	No	No	No	No	No	Yes	No	Yes	Yes
	Ver. 6.5	No	No	No	No	No	No	No	Yes	Yes	Yes
	Ver. 6.6	No	No	No	No	No	No	No	No	Yes	Yes
	Ver. 6.7	No	No	No	No	No	No	No	No	No	Yes
	Ver. 7.0	No	No	No	No	No	No	No	No	No	Yes

Yes: Can be used on the PT, No: Cannot be used on the PT

**Note** With the NSJ12, NSJ10, NSJ8, NSJ5, and NSH5, operation is possible only if the screen data version has been converted to 6.5 or higher.
## **CX-Designer and Screen Data Versions**

The versions of screen data that can be read and created depend on the CX-Designer version. Convert the data as required with CX-Designer before reading it.

Item		CX-Designer		
		Version 1.0	Version 2.0	Version 2.1
Screen Data Ver- sions	Ver. 1.X	Yes (See note.)	Yes (See note.)	Yes (See note.)
	Ver. 2.X	Yes	Yes	Yes
	Ver. 3.X	Yes	Yes	Yes
	Ver. 4.X	Yes	Yes	Yes
	Ver. 5.X	Yes	Yes	Yes
	Ver. 6.0	Yes	Yes	Yes
	Ver. 6.2	Yes	Yes	Yes
	Ver. 6.3	No	Yes	Yes
	Ver. 6.4	No	Yes	Yes
	Ver. 6.5	Yes	Yes	Yes
	Ver. 6.6	No	Yes	Yes
	Ver. 6.7	No	No	Yes
	Ver. 7.0	No	No	Yes

Yes: Can be read, No: Cannot be read

Note Screen data can be read only if a Japanese operating system is used.

## **Revision History**

A manual revision code appears as a suffix to the catalog number on the front cover of the manual.

The following table outlines the changes made to the manual during each revision. Page numbers refer to the previous version.

Revision code	Date	Revised content
01	November 2005	Original production
02	July 2006	Revised to include CX-Designer version upgrade from 1.0 to 2.0.
03	July 2007	Revised to include CX-Designer version upgrade from 2.0 to 2.1.
