

## CL-6HX-SS

Ruland CL-6HX-SS, 3/8" Hex Bore Shaft Collar, 303 Stainless Steel, One-Piece Clamp Style, 7/8" OD, 0.343" Width

### Description

Ruland CL-6HX-SS is a one-piece shaft collar with a 0.3750" bore, 7/8" OD, and 0.343" width. It has a hex bore which is useful when the collar is used in a positive drive application. The clamp style design does not mar the shaft, is easy to remove, and is indefinitely adjustable. CL-6HX-SS is commonly used for guiding, spacing, stopping, mounting, and component alignment. Equipment manufacturers benefit from the tightly controlled face to bore perpendicularity (TIR of ? .002"). Perpendicularity is critical for alignment when the shaft collar is used as a load bearing face, mechanical stop, or for mounting components such as gears or bearings. Proprietary processes have been developed by Ruland to maintain superior fit, finish, and holding power. CL-6HX-SS is stamped with the Ruland name and bore size for ease of identification. Forged screws test beyond ANSI standards to ensure maximum holding power. CL-6HX-SS is manufactured from solid bar stock sourced from select North American mills and machined to a fine burr free finish. Ruland uses 303 stainless steel with hardware of like material for consistent corrosion resistance. Stainless steel hardware undergoes a proprietary surface treatment process to prevent galling. CL-6HX-SS is RoHS3 and REACH compliant and manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

### Installation Instructions

1. Use the CL-6HX-SS hex bore shaft collar as it is received.
2. Wipe the bore clean.
3. Apply a thin coat of light oil to the shaft.
4. Place the collar onto the desired shaft location and tighten it using a 7/64 in hex wrench until a slight resistance is felt.
5. Wring collar into its final position and tighten the screw to the full recommended seating torque of 15 lb-in using a 7/64 in torque wrench.
