4. RELIABILITY

Item		Test conditions	Evaluation standard
1	Hi-Temp. Test	The microphone unit must be subjected to +80°C for 100 Hours and exposed to room temperature for 3 Hours.	After any of the tests, the sensitivity of the microphone unit shall not change more than ± 3 dB from initial value and shall keep its initial operation and appearance.
2	Low-Temp. Test	The microphone unit must be subjected to -40°C for 20 Hours and exposed to room temperature for 3 Hours.	
3	Humidity & Heat Test	The microphone unit must be subjected to +55°C, 85% RH-for 200 Hours and exposed to room temp for 3 Hours.	
4	Thermal Shocking Test	The microphone unit must be subjected to following condition [+80°C 0.5H \rightarrow room temp 1H \rightarrow -40°C 0.5H \rightarrow room temp 1H] at 10cycle.	

5	Vibration Test	The microphone unit must be subjected to a procedure that it is vibrating for two hours from each of the 3 directions(x y z) with a frequency of 10-55Hz and a 1.52mm-high amplitude.
6	Drop Test	The microphone unit must be subjected to a procedure that it is dropped on a slippery marble floor for 5 times from each axis for a total of 15 times from a 1.0-meter-height without packaging.
7	Storage Temperature	-35°C~+60°C
8	Operating Temperature	-35°C~+60°C
9	ESD Protection	The test microphone must be discharged between each ESD exposure without ground(contact :±6KV,air:±8KV)

NOTES:

All the soldering procedures upon microphones must be completed in a heat sink device. The temperature of the soldering iron must be limited to 360°C±20°C and the soldering time should not exceed 3 seconds.

Operators, the soldering fixture and the soldering iron must be statically grounded under each soldering process.
