# **80 WATTS**

## SINGLE/MULTI OUTPUT DC-DC

## FEATURES:

- Compact 2.5" x 4.5" x 1.2" Size
   3 Year Warranty
   9-18 VDC Input
   Compact 2.5" x 4.5" x 1.2" Size
   IEC 60601-1 3<sup>rd</sup> ed. Medical Cert.
   IEC 62368-1 2<sup>nd</sup> ed. Certification
   0-70°C Operating Temperature
- 9-18 VDC Input
- One to Four Outputs
- RoHS Compliant
- 4242VDC Reinforced Insulation Optional Chassis/Cover Power Good Signal
- Under/Overvoltage Lockout
- Pin Compatible with REL-70 Series

CHASSIS/COVER

| Electrical Fast Transients/Bursts | EN61000-4-4 | ±2KV, 5KHz/100KHz                                 | Α |
| Surge Immunity                    | EN61000-4-5 | $\pm 2$ KV line to earth/ $\pm 1$ KV line to line | Α |

All specifications are maximum at 25°C/80W unless otherwise stated, may vary by model and are subject to change without notice.

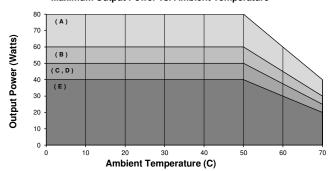

#### **APPLICATIONS INFORMATION**

- Each output can deliver its rated current but total output power must not exceed 80W or as determined by the cooling requirements.
- Generally, adequate cooling is provided when semiconductor case temperatures do not exceed 70°C rise and transformer temperature does not exceed 60°C rise at any specified ambient temperature.
- Sufficient area must be provided around power supply to allow natural movement of air to develop in convection-cooled applications.
- This product is intended for use as a professionally-installed component within information technology, industrial, and medical equipment and is not intended for stand-alone operation.
- 5. A minimum load of 10% is required on each output to ensure specified centering and regulation of each output.
- Peak-to-Peak output ripple and noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip (tip-and-barrel method), 20 MHz bandwidth.
- 7. This product was type-tested and safety-certified using the dielectric strength test voltages listed in Table 6 of IEC 60601-1:2005. In consideration of Clause 8.8.3, care must be taken to insure that the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary-to-ground capacitors may need to be disconnected prior to performing a dielectric strength test on the power supply or the end product. It is highly recommended that the DC test voltages listed in DVB.1, Annex DVB of UL 60601-11 st Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- This power supply has been safety-approved and final-tested using a DC dielectric strength test. Please consult factory before performing an AC dielectric strength test.
- Remote-Sense terminals may be used to compensate for cable losses up to 250mV (single output models only). The use of a twisted pair, decoupling capacitors and an appropriately-rated low-impedance capacitor connected across the load will increase noise immunity.
- 10. Maximum screw penetration into bottom chassis mounting holes is 0.100 inches. Maximum screw penetration into side chassis mounting holes is 0.250 inches.
- 11. Power good feature provides a logic-high signal from an open collector transistor when DC input reaches minimum operating voltage.
- 12. 300LFM minimum of airflow must be maintained one inch above all points of top-side components or cover when forced-air cooling is required.
