

Mini Speaker 4Ω (3W)

These little speakers are diminutive, but the sound they pump out is surprisingly good. They're ideal for building your own small jukebox or radio with one of our audio boards!

The 4Ω 3W speakers measure 40x40x20mm, and come with an approximately 35cm piece of wire (20AWG) attached with pre-tinned ends. The mounting holes will take an M2.5 bolt/screw and the hole centres are 32.5mm apart.
