CD54/74AC/ACT653 - Inverting  
CD54/74AC/ACT654 - Non-Inverting

Type Features:

- Buffered inputs
- Typical propagation delay:  
5.3 ns @ V<sub>CC</sub> = 5 V, T<sub>A</sub> = 25° C, C<sub>L</sub> = 50 pF

Family Features:

- Exceeds 2-kV ESD Protection - MIL-STD-883, Method 3015
- SCR-Latchup-resistant CMOS process and circuit design
- Speed of bipolar FAST<sup>®</sup>/AS/S with significantly reduced power consumption
- Balanced propagation delays
- AC types feature 1.5 V to 5.5 V operation and balanced noise immunity at 30% of the supply
- ± 24 mA output drive current
  - Fanout to 15 FAST<sup>®</sup> ICs
  - Drives 50-ohm transmission lines

<sup>®</sup>FAST is a Registered Trademark of Fairchild Semiconductor Corp.

The RCA CD54/74AC653 and CD54/74AC654 and the CD54/74ACT653 and CD54/74ACT654 octal-bus transceivers/registers use the RCA ADVANCED CMOS technology. The CD54/74AC653 and CD54/74ACT653 are inverting types having open drains on the A outputs and 3-state outputs on the B side. The CD54/74AC654 and CD54/74ACT654 differ only in that these are non-inverting types. These devices consist of bus transceiver circuits, D-type flip-flops, and control circuitry arranged for multiplexed transmission of data directly from the data bus or from the internal storage registers. Output Enables OE<sub>AB</sub> and OE<sub>BA</sub> are provided to control the transceiver functions. SAB and SBA control pins are provided to select whether real-time or stored data is transferred. The circuitry used for select control will eliminate the typical decoding glitch that occurs in a multiplexer during the transition between stored and real-time data. A LOW input level selects real-time data, and a HIGH selects stored data. The following examples demonstrate the four fundamental bus-management functions that can be performed with the octal-bus transceivers and registers.

Data on the A or B data bus, or both, can be stored in the internal D flip-flops by low-to-high transitions at the appropriate clock pins (CAB or CBA) regardless of the select or enable control pins. When SAB and SBA are in the real-time transfer mode, it is also possible to store data without using the internal D-type flip-flops by simultaneously enabling OE<sub>AB</sub> and OE<sub>BA</sub>. In this configuration, each output reinforces its input. Thus, when all other data sources to the two sets of bus lines are at high impedance, each set of bus lines will remain at its last state.

The CD74AC/ACT653 and CD74AC/ACT654 are supplied in 24-lead dual-in-line narrow-body plastic packages (EN suffix) and in 24-lead dual-in-line small-outline plastic packages (M suffix). Both package types are operable over the following temperature ranges: Commercial (0 to 70° C); Industrial (-40 to +85° C); and Extended Industrial/Military (-55 to +125° C).

The CD54AC/ACT653 and CD54AC/ACT654, available in chip form (H suffix), are operable over the -55 to +125° C temperature range.

\* To prevent excess currents in the High-Z (isolation) modes, all I/O terminals should be terminated with 10kΩ to 1MΩ resistors.  
 † The data output functions may be enabled or disabled by various signals at the OE<sub>AB</sub> or OE<sub>BA</sub> inputs. Data input functions are always enabled, i.e., data at the bus pins will be stored on every low-to-high transition on the clock inputs.  
 ‡ Select control = L: clocks can occur simultaneously.  
 Select control = H: clocks must be staggered in order to load both registers.

2. Protrusions (flash) on the base plane surface shall not exceed 0.010 in. (0.25 mm).
3. The dimension shown is for full leads. "Half" leads are optional at lead positions  $1, N, \frac{N}{2}, \frac{N}{2} + 1$ .
4. Dimension D does not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 in. (0.25 mm).
5. E is the dimension to the outside of the leads and is measured with the leads perpendicular to the base plane (zero lead spread).
6. Dimension E<sub>1</sub> does not include mold flash or protrusions.
7. Package body and leads shall be symmetrical around center line shown in end view.
8. Lead spacing e shall be non-cumulative and shall be measured at the lead lip. This measurement shall be made before insertion into gauges, boards or sockets.
9. This is a basic installed dimension. Measurement shall be made with the device installed in the seating plane gauge (JEDEC Outline No. GS-3, seating plane gauge). Leads shall be in true position within 0.010 in. (0.25 mm) diameter for dimension e<sub>A</sub>.
10. e<sub>B</sub> is the dimension to the outside of the leads and is measured at the lead lips before the device is installed. Negative lead spread is not permitted.
11. N is the maximum number of lead positions.
12. Dimension D<sub>1</sub> at the left end of the package must equal dimension D<sub>1</sub> at the right end of the package within 0.030 in. (0.76 mm).
13. For automatic insertion, any raised irregularity on the top surface (step, mesa, etc.) shall be symmetrical about the lateral and longitudinal package centerlines.

**Notes:**

1. Refer to JEDEC Publication No. 95 JEDEC Registered and Standard Outlines for Solid State Products, for rules and general information concerning registered and standard outlines, in Section 2.2.
2. Protrusions (flash) on the base plane surface shall not exceed 0.010 in. (0.25 mm).
3. The dimension shown is for full leads. "Half" leads are optional at lead positions  

$$1, N, \frac{N}{2}, \frac{N}{2} + 1.$$
4. Dimension D does not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 in. (0.25 mm).
5. E is the dimension to the outside of the leads and is measured with the leads perpendicular to the base plane (zero lead spread).
6. Dimension E<sub>1</sub> does not include mold flash or protrusions.
7. Package body and leads shall be symmetrical around

center line shown in end view.

8. Lead spacing e shall be non-cumulative and shall be measured at the lead lip. This measurement shall be made before insertion into gauges, boards or sockets.
9. This is a basic installed dimension. Measurement shall be made with the device installed in the seating plane gauge (JEDEC Outline No. GS-3, seating plane gauge). Leads shall be in true position within 0.010 in. (0.25 mm) diameter for dimension e<sub>A</sub>.
10. e<sub>B</sub> is the dimension to the outside of the leads and is measured at the lead tips before the device is installed. Negative lead spread is not permitted.
11. N is the maximum number of lead positions.
12. Dimension D<sub>1</sub> at the left end of the package must equal dimension D<sub>1</sub> at the right end of the package within 0.030 in. (0.76 mm).
13. For automatic insertion, any raised irregularity on the top surface (step, mess, etc.) shall be symmetrical about the lateral and longitudinal package centerlines.

## Dual-In-Line Small-Outline Plastic Packages

T-90-20

**NOTES:**

1. Refer to applicable symbol list.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. "D" is a reference datum.
4. "A" and "B" are reference datums and do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.15 mm (0.006 in.).
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the cross-hatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. Controlling dimensions: MILLIMETERS.
