

ISL88731EVAL2Z, ISL88731CEVAL2Z

Evaluation Boards Setup Procedure

AN1404
Rev 2.00
June 27, 2011

Introduction

The ISL88731 and ISL88731C are highly integrated battery charger controllers for Li-ion/Li-ion polymer batteries with SMBus interface controlling charge voltage, charge current and input current limiting. The evaluation board includes a USB to SMBus interface to allow users to control the ISL88731 or ISL88731C from a Personal Computer.

What's Inside

This Evaluation Board Kit contains the following materials:

- Qty (1) ISL88731EVAL2Z or ISL88731CEVAL2Z Evaluation Board
- Qty (1) USB cable

What is Needed

The following materials are recommended to perform testing:

- One AC adaptor or one adjustable 25V/6A DC power supply
- Two adjustable electronic loads with constant current mode and constant voltage mode
- One Volt Meter
- One 500MHz four-channel oscilloscope with voltage and current probes
- A Personal Computer (PC) with ISL88731(C) control software and drivers (all available on the self extracting archive file ISL88731_v3.0_Installer.exe available for download from www.Intersil.com)

Note: The National Instruments Runtime Engine must be installed before connecting the evaluation board to your PC. The Runtime Engine contains driver files required by the New Hardware Wizard.

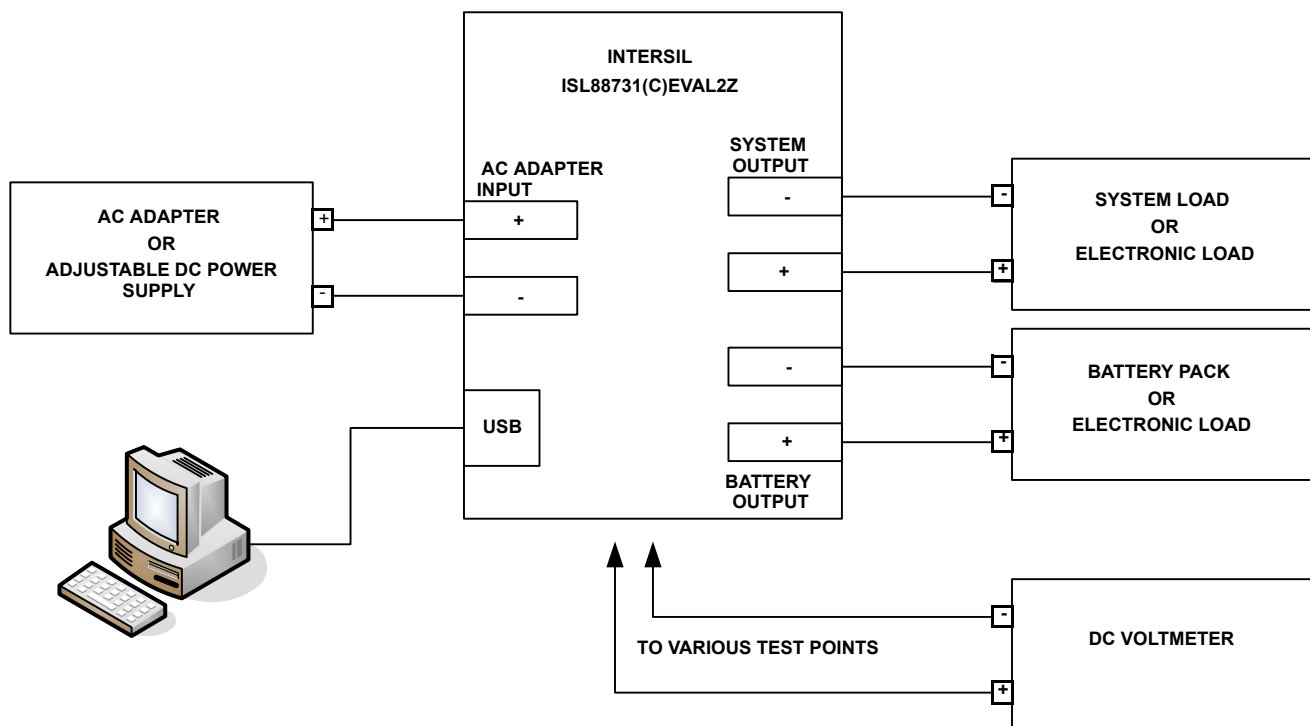

FIGURE 1. ISL88731(C)EVAL2Z HARDWARE CONNECTION DIAGRAM

Download, Extract and Install the Software

Download the self extracting archive file ISL88731_v3.0_Installer.exe. The URL for the file is: http://www.intersil.com/data/ev/isl88731_control_v3_sw_installer.zip

It will create a folder (“ISL88731 Installer”) in the folder that holds the self extracting file. A dialog box will give you the opportunity to change the location of the extracted files.

Make a note of the location of the folder. You will need to direct the New Hardware Wizard to this folder for the driver.

Software Installation

Both the ISL88731(C) control program and the National Instruments run time engine are installed from the “ISL88731 Installer” folder. Navigate to the folder and double click the “AutoRun.exe” file. You should see the window as shown in Figure 2.

Click on the “Install or Uninstall ISL88731 Control Software” to run the Installation Wizard.

You should now see a window as shown in Figure 3.

FIGURE 2. ISL88731(C)EVAL2Z CONTROL SOFTWARE INSTALLATION MENU

FIGURE 3. ISL88731(C)EVAL2Z CONTROL SOFTWARE INSTALLATION WIZARD

In most PCs the National Instruments Runtime Engine will be installed automatically after the ISL88731(C) control software. You should see the window as shown in Figure 4.

FIGURE 4. NATIONAL INSTRUMENTS RUNTIME ENGINE INSTALLATION WIZARD

Follow the instructions to install the Runtime Engine. If it does not run automatically, click “Install National Instruments Runtime Engine” on the ISL88731(C)EVAL2Z Control Software Installation Menu (see Figure 2). After installation, click on the Close Menu button.

Driver Installation

Connect the ISL88731(C)EVAL2Z to the USB port of your PC.

Note: The SMBus part of the ISL88731(C) and the USB-SMBus interface are powered by the 5V from the USB port on the PC. It is not necessary to have other power supplies connected to the evaluation board to read or write to the ISL88731(C).

When WINDOWS detects new hardware, the new hardware wizard should appear. Direct it to look for the driver information file in the “ISL88731 Installer” folder (extracted from the downloaded file). In some systems, it may be necessary to specify the driver information file (USB-I2C_WDM.inf).

Run the ISL88731 Application

ISL88731(C) control software should now appear in your Start/All Programs list. Click on it to run the application.

Figure 5 shows a screen shot of the ISL88731(C) control software user interface.

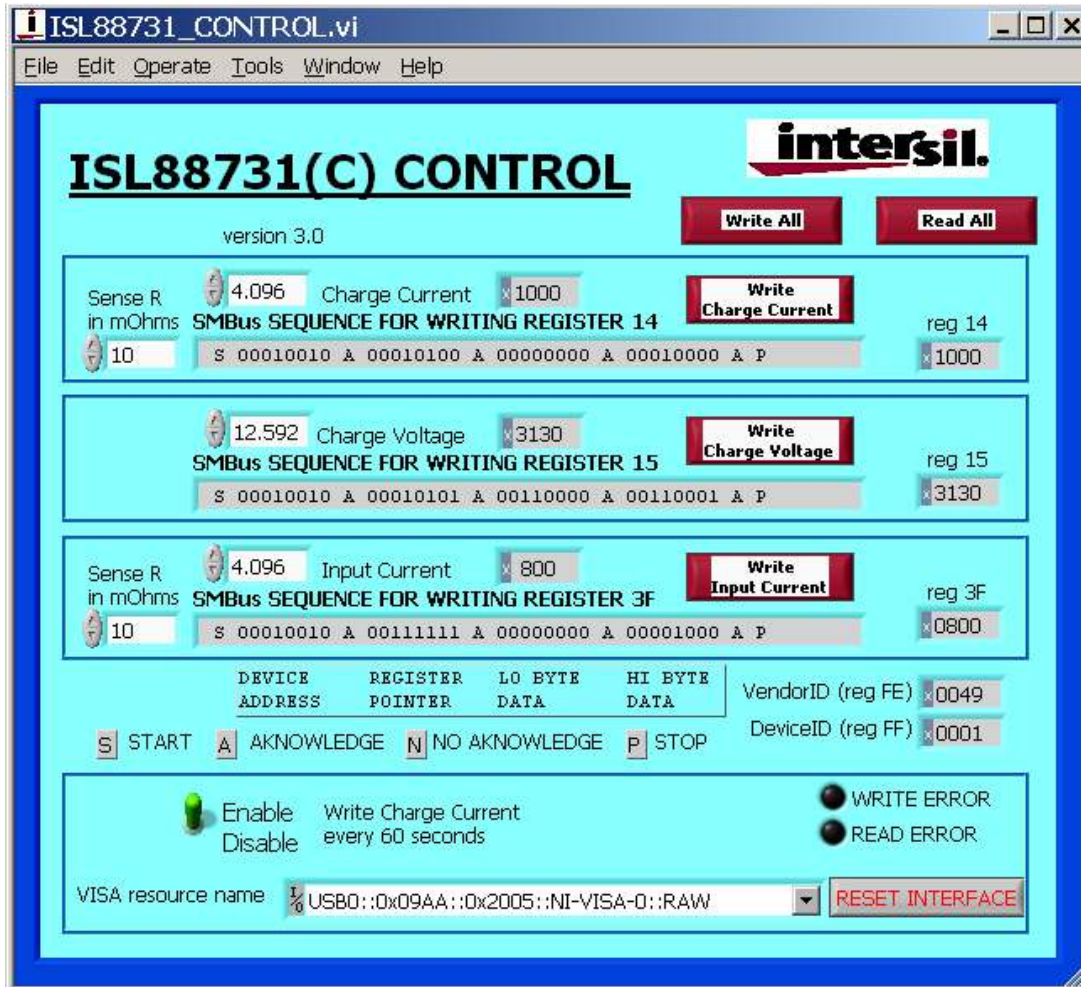

FIGURE 5. ISL88731(C)EVAL2Z CONTROL SOFTWARE SCREEN SHOT

Enable the Output

When power is applied to the ISL88731(C), the Charge Current and Charge Voltage Registers are 0x0000 and the output is disabled. The output is enabled by writing valid, non-zero values to these 2 registers. See the ISL88731(C) datasheet for valid values.

The ISL88731(C) is also disabled if the ACIN pin is below 3.2V. An Input voltage >13.1V will pull ACIN above 3.2V. The minimum input voltage can be adjusted on the evaluation board by changing R₆ or R₇ (see Figure 10).

Description of the User Interface Controls and Display Information

Clicking the “Write All” button will write the indicated SMBus sequences to Registers 14, 15 and 3F in the ISL88731(C).

Clicking on the “Read All” button will read all 5 registers in the ISL88731(C) and display the results in the grey indicators below the “Read All” button.

If the device and the interface are operating normally, the VendorID (reg FE) and the DeviceID (reg FF) will display as follows:

If the VendorID (reg FE) and DeviceID (reg FF) remain 0000 it indicates a communication problem.

If the Visa resource name is blank, it indicates a problem with the USB communication.

Clicking on the “RESET INTERFACE” button may correct the problem. If not, try closing the software, remove power and USB connections from the evaluation board, then reconnect and restart.

Note the register contents in the user interface are updated ONLY when the “Read All” button is clicked.

The “Write Charge Current” button sends only the charge current command to the ISL88731(C). Other registers are unchanged.

The small white window next to “Charge Current” accepts inputs in Amps, and converts them the hexadecimal (hex) value to be written to the ISL88731(C) in the grey window.

The hex value depends on the value entered in Sense R.

The value in the white window will be forced to the nearest valid number that can be produced by the DAC in the ISL88731(C). That is, after entering 4 and hitting the enter key, the display will change to 3.968. After entering 4.1 and hitting

the enter key, the display will change to 4.096. The value can be incremented and decremented with the up/down arrows at the left of the window.

The Sense R inputs are used to calculate the hexadecimal (hex) values and the SMBus sequences for the Charge Current limit and Input Current limit entered in the white boxes. The evaluation board is built with 10mΩ sense resistors. If you change them to another value, enter the new value to get correct calculations.

After entering a number in the white box, hitting the enter key or clicking on another area will enter the value and the resulting hex value and the SMBus sequence will be calculated and displayed.

SMBus SEQUENCE FOR WRITING REGISTER 3F

S 00010010 A 00111111 A 00000000 A 00001000 A P			
DEVICE ADDRESS	REGISTER POINTER	LO BYTE DATA	HI BYTE DATA

S = the Start condition, A = the Acknowledge, P = the Stop condition.

Note: The LO byte is sent first. The HI byte is sent second.

When writing 0x41A0, 0xA0 is written first and 0x41 is sent second.

Important Note: The SMBus commands are NOT sent until one of the WRITE buttons is clicked (i.e. Write All or Write Charge Current).

The “Write Charge Voltage” button writes only the Charge Voltage register. Other registers are unchanged.

The small white window accepts Charge Voltage (in Volts) and calculates the hexadecimal value and the SMBus sequence to write to the ISL88731(C). The SMBus command is sent when the “Write Charge Voltage” or “Write All” button is clicked. See Figure 8.

The “Write Input Current” button writes only the Input Current register. Other registers are unchanged. The small white window accepts Input Current Limit in Amps and calculates the hex value and the SMBus sequence to be written to the ISL88731(C). The Sense R input is used to calculate the hex value and the SMBus sequence. The SMBus command is sent when the “Write Input Current” or “Write All” button is clicked. See Figure 9.

The ISL88731(C) will shut down unless it receives Charge Voltage or Charge Current commands every 175s. This is a safety feature that prevents overcharging batteries if bus master has stopped functioning. The control software includes the function to write the Charge Current register every 60 seconds, which can be enabled or disabled as shown in Figure 6 and Figure 7.

FIGURE 6. ENABLE WRITING CHARGE CURRENT REGISTER EVERY 60 SECONDS

FIGURE 7. DISABLE WRITING CHARGE CURRENT REGISTER EVERY 60 SECONDS

FIGURE 8. WRITE CHARGE VOLTAGE BLOCK

FIGURE 9. WRITE INPUT CURRENT BLOCK

Interface Troubleshooting

When the evaluation board is connected to the PC by a USB cable and the software is running, the software assigns a VISA resource name.

If this window is blank, it indicates a problem with communication between the PC and the micro controller on the evaluation board. Check and correct the connection of the USB cable to your PC and the evaluation board. Click on the "RESET INTERFACE" button.

If you still get no VISA resource name, Close and restart the ISL88731(C) control software.

If you still get no VISA resource name, Open the Device Manager (Control Panel/System/Device Manager) with the ISL88731(C)EVAL2Z evaluation board connected to your USB port. You should see a device named "NI-VISA USB Device". If it is not in the list of devices, the driver may not be correctly installed. Run the New Hardware wizard.

If you still get no VISA resource name, contact your Intersil Field Application Engineer for assistance.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
