## Test Procedure for the NCP1523B Evaluation Board

ON Semiconductor®

## 12.15.2006

## **Equipment needed**

- · Power supply
- · Digital Volt Meter
- · Digital Amp Meter

## **Test**

- 1) Jumper ENABLE should be open.
- 2) Set the power supply to 3.6 V and the current limit to at least 800 mA.
- 3) Connect the power supply connector to connectors VIN+ and VIN-. The DC current measurement on Vin line should be around  $0.3~\mu A$ .
- 4) Close ENABLE connector. The DC current measurement on Vin line should be around 3mA.
- 5) Measure the output voltage between VOUT+ and VOUT- connectors. You should see around 1.2 V voltage operation.
- 6) Remove the ENABLE jumper. The DC current measurement on Vin line should be back around 0.3  $\mu A$ .
