

### DESCRIPTION

The EV9928-L-00C Evaluation Board is designed to demonstrate the capabilities of MP9928. The MP9928 is a high-voltage, synchronous step-down controller that directly steps down voltages from up to 60V. The MP9928 uses PWM current control architecture with accurate cycle-by-cycle current limiting and is capable of driving dual N-channel MOSFETs.

The operating frequency of the MP9928 can be programmed by an external resistor or synchronized to an external clock for noise sensitive applications. Full protection features include precision output over-voltage protection (OVP), output over-current protection (OCP), and thermal shutdown.

The MP9928 is available in TSSOP20-EP and QFN-20 (3mmx4mm) packages. This board is available in QFN-20 (3mmx4mm) package.

### ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	6-60 <sup>(1)</sup>	V
Output Voltage	$V_{OUT}$	5	V
Output Current	$I_{OUT}$	7	A

### FEATURES

- 6V to 60V Input Voltage for This 5V Output Board
- Dual N-Channel MOSFET Driver
- Low Dropout Operation: Maximum Duty Cycle at 99.5%
- 180° Out-of-Phase SYNCO Output
- Programmable Soft Start
- Output Power Good Indicator
- Selectable Threshold for Cycle-by-Cycle Current Limit
- Programmable Frequency Range: 100kHz-1000kHz
- External Power Bias Option for Vcc Supply
- Output Over-Voltage Protection (OVP)
- Over-Current Protection (OCP)
- QFN-20 (3mmx4mm) Package on This Board

### APPLICATIONS

- PD Power Supply in PoE System
- USB Dedicated Charging Port (DCP)
- Industrial Control Systems
- Power Supply for Linear Chargers

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

Note: (1) The IC can work to 4V input, but the output voltage will drop, it is limited by the maximum duty cycle.

## QUICK START GUIDE

The output voltage of this board is set to 5V. The board layout accommodates most commonly used components.

1. Preset Power Supply to  $6V \leq V_{IN} \leq 60V$ .
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
  - a. Positive (+): VIN
  - b. Negative (-): GND
4. Connect Load to:
  - a. Positive (+): VOUT
  - b. Negative (-): GND
5. The MP9928 is enabled on the evaluation board once VIN is applied.
6. Turn Power Supply on after making connections, the MP9928 will startup automatically.
7. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.3V to turn on EV9928-L-00C or less than 1V to turn it off.
