

Exclusive Control Unit for Safety Light Curtain SF-C10 SERIES

The control category differs depending on the configuration and wiring of the external circuit.

Exclusive Control Unit for Safety Light Curtain

SF-C10 SERIES

The control category differs depending on the configuration and wiring of the external circuit.

Less setup time for safety circuits

Plug-in type control unit

Quick-connection

Connecting to the safety light curtain is done using plug-in connections, which shortens setup and replacement time.

Easy setup requiring no torque control

A spring method is used for the terminal blocks for connections other than to the safety light curtain. There is no need to control tightening

Flat-tipped screwdriver torques for Lead wire these terminal Ferrule (sleeve) terminal (Please arrange separately.) blocks. Uses a

spring method! Release button

SF-C11 / SF-C14EX(-01)

Removable terminal blocks reduce maintenance time

Removable terminal blocks are used. This reduces the work required for reconnecting wiring during maintenance.

Robust type control unit

Slim type control unit

Lead wire insertion hole

Slim design

Metal enclosure with a IP65 protective structure

The strong metal enclosure has a built-in safety relay. It has an IP65 protective structure, so that it can be set up individually without needing to be inserted into a control panel. **IP65**

Metal enclosure

22.5 mm 0.886 in thickness, so can be inserted even into narrow spaces inside panels.

Building of muting control circuits is easy

SF-C14EX(-01)

The method used to build the safety circuit is selectable

It is possible to build muting control circuits using a stand-alone safety light curtain from the **SF4B** / **SF4B-G** series. The **SF-C14EX**(-**01**) application expansion unit allows the safety light curtain, muting sensors and muting lamps to be connected together directly, so that muting control circuits can be built very easily.

Both safety and productivity can be obtained by stopping only one part of the device SF-C14EX(-01)

Three safety circuit systems packaged into a single unit!

Three safety circuit systems ① Safety light curtain output circuit, ② Muting control circuit, and ③ Emergency stop circuit are packaged into a single unit. Functions that require multiple safety relay units and muting control units can be concentrated into a single unit, which results in large space savings, less wiring and less installation work.

High-speed response 14 ms (Including safety light curtain)

High-speed response has been achieved due to the adoption of the semiconductor output. Avoids the response delays that occur when using more than one safety relay unit, and greatly reduces the safety light curtain safety distance and improves ease of working. Of course, it is not necessary to exchange the safety relays within the unit anymore, which contributes to the reduction of running cost.

① Safety light curtain output circuit ② Muting control circuit

③ Emergency stop circuit

Three safety circuit systems can be controlled independently so that equipment can be stopped all together or partially SF-C14EX(-01)

Motors that use muting control and those that do not use it can be controlled independently!

Controls the motors that use muting control (robots) and the motors that do not use muting control (turntables) with a single unit.

When the workpiece comes in, the turntable can be stopped and the robot can keep operating condition, to protect the safety of the operator and to maintain productivity.

Safety circuit 1: Linked to safety light curtain beam received / interrupted status (partial stop)

When the safety light curtain is interrupted (when an workpiece enters or a person intrudes), this circuit switches off (open) the safety output and stops the turntable.

Safety circuit 2: Linked to muting control (partial stop)

If an workpiece enters when the turntable has stopped normally, (muting conditions are achieved), this circuit allows the robot to operate.

If an workpiece enters while the turntable is turning (muting conditions are not achieved), this circuit switches off (open) the safety output and stops the robot.

Safety circuit 3: Linked to emergency stop input (all stop)

When the emergency stop button is pressed, this circuit switches off (open) the safety output and stops all equipment (turntable and robot).

Equipped with blown lamp output for muting lamp

If a lamp in one of the two muting lamps that are connected to the unit blows, a warning is output. It is possible to replace the lamp before both lamps blow and the equipment stops. In addition, auxiliary output that is linked to the muting function, override function and safety light curtain control output is also available.

	Function	Operation
Auxiliary output 1	Muting output	ON when the muting function is invalid
Auxiliary output 2	Override output	ON when the override function is invalid
Auxiliary output 3	Blown lamp output	ON when the muting lamp is normal
Auxiliary output 4	Safety light curtain auxiliary output	ON when the safety light curtain is in light interrupted condition

Equipped with a digital indicator so that error details can be understood at a glance!

If a problem should occur, the same output (OFF signal) as when the object was detected is maintained in order to ensure safety, and the details of the error appear on the digital display.

Supports both PNP and NPN polarities

All Models

ORDER GUIDE

Designation	Appearance	Model No.	Applicable cable (Note)	Description	
Connector connection type control unit		SF-C11	Safety light curtain connection cable: SFB-CB (For SF4B series) SF2B-CB (For SF2B series) Extension cable: SFB-CCJ10	Use 8-core cable with connector to connect to the safety light curtain. Compatible with up to Control Category 4. Interference prevention wires and muting function cannot be used.	
Robust type control unit		SF-C12	Safety light curtain connection cable: SFB-CB05-MU Extension cable: SFB-CCJ10□-MU	Use 12-core cable with connector to connect to the safety light curtain. Interference prevention wires can be used. Compatible with up to Control Category 4. Muting function cannot be used.	
Slim type control unit		SF-C13	Safety light curtain connection cable: SFB-CCB _□ (-MU) (For SF4B series) SF2B-CCB _□ (For SF2B series) Extension cable: SFB-CC _□ (-MU)	Use a discrete wire cable to connect to the safety light curtain. Muting function and interference prevention wires can be used. Compatible with up to Control Category 4.	
Application expansion unit for		SF-C14EX	Safety light curtain connection cable:	The muting control function and emergency stop input expand the applications of the safety light curtains. Use exclusive cable to connect to the safety light curtain.	
SF4B / SF4B-G series		SF-C14EX-01	Extension cable: SFB-CCJ10 _□	Compatible with up to Control Category 4. The handy-controller SFB-HC (optional) cannot be used with SF-C14EX-01.	

Note: Refer to ${\bf SF4B}\,/\,{\bf SF4B\text{-}G}$ series and ${\bf SF2B}$ series for the applicable cable.

SF-C12 spare relay set

A set of spare relays (2 safety relays and 1 removal tool) is available for the safety relay that is built into the SF-C12. Model No.: SF-C12-RY

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.

- 2) **SF-C11** and **SF-C13** comply with UL 1998 (Class 2).
- 3) If several SF-C11 or SF-C13 units are being used in line together, leave a space of 5 mm 0.197 in or more between each unit. If the units are touching each other, reduce the rated operating current for safety output in accordance with the ambient operating temperature as shown in the graphs at right.
- 4) The life expectancy of the relay varies depending on the type of load, open / close frequency, ambient conditions and others.
- 5) The operation indicator is marked as "Enabling" on the unit for SF-C12.
- 6) Terminals for utilizing the functions of the SF4B / SF4B-G series are available.
- 7) Please switch the sliding switch to the PNP side for minus ground and to the NPN side for plus ground.

Environmental resistance	Ambient temperature	-10 to +55 °C +14 to +131 °F (No dew condensation or icing allowed), Storage: -25 to +70 °C -13 to +158 °F						
l resi	Ambient humidity	30 to 85 % RH, Storage: 30 to 95 % RH						
enta	Dielectric strength voltage	1,000 V AC for one min. between all supply terminals connected together and enclosure						
ronm	Insulation resistance	20 MΩ, or more, with 500 V DC megger between all supply terminals connected together and enclosure						
Envi	Vibration resistance	10 to 55 Hz frequency, 0.35 mm 0.014 in double amplitude in X, Y and Z directions for two hours each						
	Shock resistance	30 G acceleration in X, Y and Z directions three times each						
Mate		Enclosure: ABS						
	nection terminal	Detachable spring-cage terminal						
Weig	ght	Net weight: 250 g approx. Onditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.						

- Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.

 2) The handy-controller SFB-HC (optional) cannot be used with SF-C14EX-01.

 3) Both safety output 1 and 2 are OFF when the emergency stop is valid regardless of whether the safety light curtain is in the light receiving or light interrupted condition.

 4) The auto-reset cannot be used with safety output 3.

 5) The auxiliary output incorporated in the SF4B / SF4B-G series is output.

 6) PFHD: Probability of dangerous failure per hour, MTTFD: Mean time to dangerous failure (in years)

SAFETY LIGHT CURTAIN WIRING DIAGRAMS

Wiring diagram of SF-C11 and SF4B / SF4B-G series or SF2B series (Control Category 4 or 2)

For PNP output (minus ground)

 Set the safety light curtain input polarity selection switch to the PNP side and ground the 0 V line.

Notes: 1) The above diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.

- 2) Use a momentary-type switch as the reset (RESET) button.
- 3) Emission halt occurs when the test (TEST) button is open, and emission occurs when the test (TEST) button is short-circuited. If not using the test (TEST) button, short-circuit T1 and T2. However, in case of SF2B series, use a test rod or similar to interrupt the light in order to carry out self-diagnosis separately.

Safety light curtain input For NPN output (plus ground) polarity selection switch · In the above diagram, set +24 V DC -RESET E the safety light F.G. - A1 curtain input polarity selection Receiver side connector NPN PNP switch to the NPN SF-C11 control circuit side and ground the + side. Emitter sig OUT TINTER_LOCK TO FAULT A2 AUX T2 TEST L ∔n v

Wiring diagram of SF-C12 and SF4B / SF4B-G series (Control Category 4)

For PNP output (minus ground)

 Set the two safety light curtain input polarity selection switches to the PNP side and connect the F.G. terminal to the 0 V line.

Note: The above diagram is when using manual reset. If automatic reset is used, connect a normal close-type pushbutton switch between T1 and T2 and leave between X1 and X2 open.

For NPN output (plus ground)

• In the above diagram, set the two safety light curtain input polarity selection switches to the NPN side and connect the F.G. terminal to the + side.

When connecting the SF-C11 to the safety light curtains, make sure to use the 8-core connection cable with a connector. Refer to the SF4B / SF4B-G series and SF2B series for details. SFB-CB□, SF2B-CB□, SFB-CCJ10□

13-14, 23-24, 33-34	Safety output (NO contact × 3)
41-42	Auxiliary output (NC contact × 1)

Use a separate terminal block to carry out wiring for safety light curtains that cannot be connected to the **SF-C13**.

For NPN output (plus ground)

• Connect the safety light curtain control outputs OSSD1 and OSSD2 to S4 and S2 respectively and ground the + side.

Notes: 1) The above diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.

- 2) Use a momentary-type switch as the reset (RESET) button.
- 3) This is a test input (pink) for the SF2B series.
- 4) This is not equipped on the **SF2B** series.
- 5) This is a shield for the SF2B series.

When connecting the SF-C13 to the safety light curtains, make sure to use a discrete wire connection cable. Refer to the SF4B / SF4B-G series and SF2B series for details. SFB-CCB(-MU), SF2B-CCB(-MU)

SAFETY LIGHT CURTAIN WIRING DIAGRAMS

Wiring diagram of SF-C14EX(-01) and SF4B / SF4B-G series (Control Category 4)

For PNP output (minus ground)

• Set the output polarity selection switch to the PNP side and ground the 0 V line.

- When connecting the SF-C14EX to the safety light curtains, make sure to use the following connecting cable.
 SFB-CB05-EX (Cable length: 0.5 m 1.640 ft)
 SFB-CB5-EX (Cable length: 5 m 16.404 ft)
 SFB-CB10-EX (Cable length: 10 m 32.808 ft)
- If the NO (Normally Open) contact switch is used as a muting sensor, wire it as shown in the figure below.

 If the emergency stop switch is not used, short-circuit between the terminals S11 to S12 and S21 to S22 directly.

Notes: 1) The above diagram is when using manual reset. If automatic reset is used, disconnect the lead from X12 and X22, and connect them to X13 and X23 as shown by the dotted lines. In this case, a reset (RESET) button is not needed. Terminals X31 to X32 are for manual reset only.

2) Use a momentary-type switch for the reset (RESET) button.

For NPN output (plus ground)

• Set the output polarity selection switch to the NPN side and ground the + side of the power supply input.

Function

- Notes: 1) The left diagram is when using manual reset. If automatic reset is used, disconnect the lead from X12 and X22, and connect them to X13 and X23 as shown by the dotted lines. In this case, a reset (RESET) button is not needed. Terminals X31 to X32 are for manual reset only.
 - 2) Use a momentary-type switch for the reset (RESET) button.

Part description and function [SF-C14EX(-01)]

No.	Description	Function
1	Emitter side connector	The emitter of SF4B / SF4B-G series is connected.
2	Receiver side connector	The receiver of SF4B / SF4B-G series is connected.
3	Digital indicator (Red)	Lights up or blinks when there is a problem. Lights up when blanking function is enabled.
4	Power indicator (Ui) (Green)	Lights up when the power is ON.
5	Test input indicator (TEST) (Yellow)	Lights up when test input is enabled. Blinks while communication with SFB-HC (optional) handy-controller is in progress. (Excluding SF-C14EX-01)
6	Muting sensor 1 indicator (MU1) (Orange)	Lights up when muting sensor 1 is ON.
7	Muting sensor 2 indicator (MU2) (Orange)	Lights up when muting sensor 2 is ON.
8	Safety output 1 indicator (OUT1) (Green)	Lights up when safety output 1 is ON.
9	Safety output 2 indicator (OUT2) (Green)	Lights up when safety output 2 is ON.
10	Safety output 3 indicator (OUT3) (Green)	Lights up when safety output 3 is ON.
11)	Output polarity selection switch	PNP (minus ground) or NPN (plus ground) can be selected. The factory setting is PNP (minus ground).
12	Auxiliary output 1 indicator (AUX1) (Orange)	Lights up when auxiliary output 1 is ON.
(13)	Auxiliary output 2 indicator (AUX2) (Orange)	Lights up when auxiliary output 2 is ON.
(14)	Auxiliary output 3 indicator (AUX3) (Orange)	Lights up when auxiliary output 3 is ON.
(15)	Interlock 1 indicator (INTER LOCK1) (Yellow)	Lights up when interlock 1 is ON.
16	Interlock 2 indicator (INTER LOCK2) (Yellow)	Lights up when interlock 2 is ON.
17)	Interlock 3 indicator (INTER LOCK3) (Yellow)	Lights up when interlock 3 is ON.

Wiring

 The following solid wire and twisted wires (lead wire) are recommended.

SF-C11

Power supply and output line connector: 0.2 to 2.5 mm² (AWG24 to 12) Signal line connector: 0.2 to 1.5 mm² (AWG24 to 16)

SF-C13

Single wire: Ø0.4 to Ø1.2 mm Ø0.016 to Ø0.047 in

(AWG26 to 16)

Twisted wire (lead wire): 0.3 to 1.25 mm² (AWG22 to 16)

SF-C14EX(-01)

Power supply line connector (A1, A2): 0.2 to 2.5 mm² (AWG24 to 12)

Other connectors: 0.2 to 1.5 mm² (AWG24 to 16)

Output waveform (Safety output ON) [SF-C14EX(-01)]

• When safety output is ON, self-diagnosis of the output circuit is carried out, so that the output transistor will periodically turn OFF. (OFF pulse width: 100 µs or less) When the OFF signal is fed back, the receiver judges the output circuit as normal. When the OFF signal is not fed back, the receiver judges either the output circuit or wiring as error, and the safety output maintains OFF status.

Since the OFF signal of **SF-C14EX(-01)** might cause malfunction, perform the connecting paying attention to the input response time of the machine to be connected to **SF-C14EX(-01)**.

Time chart [SF-C14EX(-01)]

Normal operation

 The diagram shows operation with safety outputs 1 and 2 in manual-reset mode.

- The diagram above is the timing chart of SF-C14EX(-01) in normal operation.
- In normal operation, auxiliary output 2 (override output) is maintained in the ON state.
- In normal operation, auxiliary output 3 (muting lamp output) is maintained in the ON state.

PRECAUTIONS FOR PROPER USE

Time chart [SF-C14EX(-01)]

Test input, Override input

 The diagram shows operation with safety outputs 1 and 2 in auto-reset mode.

- Safety outputs 1 and 2 are OFF during test input.
- The override function becomes valid when all the conditions listed below are satisfied:
 - An incandescent lamp with 3.6 to 30 W is at least connected to either muting lamp output 1 or 2.
 - The signal is input to either muting sensor 1 or 2.
 - The override input terminal O1 and O2 is short-circuited and the test input terminal T1 / T2 is opened within 1 sec. (3 sec. continuously)

If one of the three conditions above becomes invalid or the timing exceeds 60 sec., the override function becomes invalid.

Blown lamp output

 The diagram shows operation with safety outputs 1 and 2 in auto-reset mode.

 The lamps are monitored during muting state, and if either of them breaks, auxiliary output 3 is turned OFF.
 If only one lamp breaks, the muting state is maintained, however, if both lamps break, the muting state is canceled immediately.

Others

- This device has been developed / produced for industrial use only.
- When connecting this product to a product other than the connectable input device, the system does not conform to the control category 4 based on ISO 13849-1 (EN ISO 13849-1, JIS B 9705-1).
- The power supply unit of SF-C10 series uses the electronic fuse which does not require any replacement.
- When the electronic fuse trips, turn off the power supply and eliminate the cause for the overcurrent. After that, turn the power back on.

- The electronic fuse is not meant to be used for equipment that is operated continuously. Note that the specification may not be satisfied by continuous operation.
- Make sure to carry out the wiring in the power supply off condition.
- · Wrong wiring will damage the product.
- Verify that the supply voltage variation is within the rating. Note that if a voltage exceeding the rated range is applied, or if an AC power supply is directly connected, the unit may get burnt or damaged.
- The DC power supply unit must satisfy the conditions given below:
- 1) Power supply unit authorized in the region where this device is to be used.
- 2) Power supply unit conforming to EMC Directive and Low-voltage Directive (In case CE conformity is required.)
- 3) Power supply unit conforming to the Low-voltage Directive and with an output of 100 VA or less.
- 4) The frame ground (F.G.) terminal must be connected to ground when using a commercially available switching regulator.
- 5) Power supply unit with an output holding time of 20 ms or more.
- 6) Use an isolation transformer for the DC power supply unit.
- If surges are likely to occur, take countermeasures such as connecting a surge absorber to the origin of the surge.
- 8) Power supply unit corresponding to CLASS 2 (In case UL/c-UL conformity is required.)

<Additional information>

As provided in IEC 60536 (CLASS: Protection against Electric Shook), this power supply should require no ground earth and satisfy the insulation distance by double insulation or reinforced insulation.

If the power supply conforms to Low-voltage Directive and has an output of 100 VA or less, it can be used as a suitable product.

- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- This product is not dust-proof / splash proof. Be sure to put this product into a control box having IP54 construction. (Excluding SF-C12)
- · Avoid dust, dirt and steam.
- Take care that the product does not come in direct contact with oil, grease, or organic solvents, such as, thinner, etc.
- Note that this equipment is applicable only in the control circuit grounded in accordance with IEC 60204-1 and JIS B 9960-1, or in the control circuit in which the insulation monitor unit (ground fault detection unit) is included.
- This unit is suitable for indoor use only.
- The seal as shown in the drawing on the below is stuck to the engagement point of unit. If the seal is peeled off or broken, SF-C10 series will not be certified as "Safety equipment" and will not be covered by our guarantee.

Do not open!

If this seal is removed or damaged, the units are not recognized as safety product.

DIMENSIONS (Unit: mm in)
