#### WL Series Liquid Cooling System

The WL500 is a re-circulating liquid to air heat exchanger that offers dependable, compact performance by removing large amounts of heat from a liquid circuit. The coolant is re-circulated using a high pressure pump to assure maximum flow rate. Heat from coolant is absorbed by a radiant heat exchanger and dissipated into the ambient environment using brand name fan. Manual adjustments can be made to control flow switch. Customized features are available, however, MOQ applies.

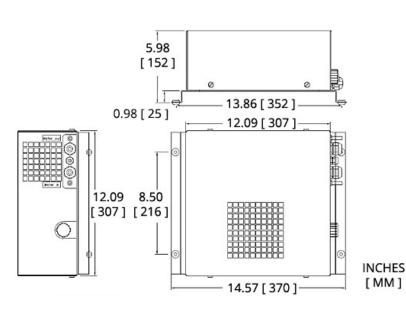

#### Features

- Cooling to ambient
- High heat pumping capacity
- Compact form factorLong life operation

#### Applications

- Cooling Particle Accelerators: Linear Accelerators and Cyclotrons
- Semiconductor Fabrication Equipment Cooling
- X-ray Cooling in Industrial Scanners

# **FLUID OPERATING POINTS**

#### 100% Water

Cooling Power (Qc) = 500 Watts Thermal Conductance = 36.1 W/°C $\Delta T (Ambient-Coolant)^* = 13.9 °C$  $\Delta T (Outlet-Inlet)^{**} @ 2.3 L/min = 3.1 °C$ 

#### 60/40 Water-Glycol

Cooling Power (Qc) = 500 Watts Thermal Conductance = 30.7 W/°C $\Delta T \text{ (Ambient-Coolant)* = } 16.3 °C$  $\Delta T \text{ (Outlet-Inlet)** @ } 2.3 \text{ L/min = } 3.4 °C$ 

## 70/30 Water-Glycol

Cooling Power (Qc) = 500 Watts Thermal Conductance = 31.8 W/°C $\Delta T \text{ (Ambient-Coolant)}^* = 15.7 °C$  $\Delta T \text{ (Outlet-Inlet)}^{**} @ 2.3 L/min = 3.3 °C$ 

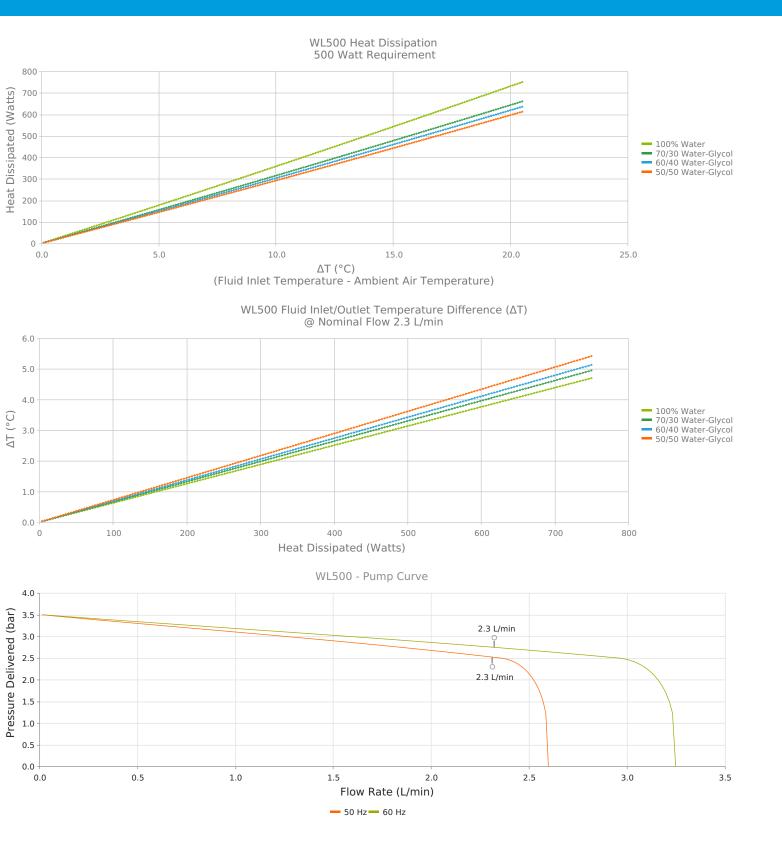

## 50/50 Water-Glycol

Cooling Power (Qc) = 500 Watts Thermal Conductance = 29.6 W/°C  $\Delta$ T (Ambient-Coolant)\* = 16.9°C  $\Delta$ T (Outlet-Inlet)\*\* @ 2.3 L/min = 3.6 °C

\*  $\Delta T$  (Ambient-Coolant) is the temperature difference between the ambient temperature and the coolant temperature that is at the outlet of the heat exchanger during steady-state operation. This temperature difference would initially be 0 and increase to the steady state value under load. This would also be the temperature at the inlet to the application.

\*\* ΔT (Outlet-Inlet) is the temperature difference between the inlet temperature and the outlet temperature of the application at the nominal coolant flow. More flow (application pressure drop less than nominal) would necessarily mean a smaller ΔT.

# **TECHNICAL SPECIFICATIONS**

Performance

Width

Weight

Couplings

**Coolant Capacity** 

Performance	
Nominal Cooling Capacity	500 W
Nominal Operating Flowrate (60 Hz)	2.3 L/min @ 2.7 Bar
Nominal Operating Flowrate (50 Hz)	2.3 L/min @ 2.5 Bar
Operation	
Coolant	Water or Water/Glycol
Operating Temperature	5°C to 40°C
Storage temperature range (w/o coolant)	-25°C to 70°C
Humidity range	20% to 80%
Storage Humidity range	5% to 95%, non-condensing
Input Voltage	230 VAC
Frequency	50/60 Hz
Current	< 1.2 Amps
Noise	< 60 dB(A)
Flow Switch Open	≤ 0.9 L/min
Maximum Forward Pressure	3 Bar
Physical	
Height	151 mm
Length	370 mm

307 mm

1.7 Liters

Press fit (8 mm ID hose)

11 kg

Features	Applications
Compact design	Medical imaging systems
Reliable operation	Photonics laser systems
Adjustable flow switch	X-Ray scanning systems
Bypass valve protection	Semiconductor fabrication

# **NOTES**

- 1. Check coolant level regularly. For optimal cooling performance, coolant level should always be above MIN fill level.
- 2. Hose selection should be of material and thickness to support pressure resistance and coolant type.
- 3. Wall mountable. Four mounting holes are available to accommodate S6 fixing and 5 X 40 mm machine screws.
- 4. Multiple cord plug options available to accommodate regional socket outlet requirements. Consult with Laird Technologies on cord plug selection.
