Recommended values

Part symbol	Recommended value	Notice
C1	1μF, tantalum or ceramic Ex.) TCFGA1A105M8R (ROHM)	Bigger capacitance is recommended with much noise from power supply
R1	7.5Ω±5%, 1/4W (VLEDV _{CC} =2.8V)	More than 60cm distance, more than 4[μW/cm ²] at detecting side. (vs ver1.0) More than 46cm distance, more than 6.8[μW/cm ²] at detecting side. (vs RPM871-H12)

In case of using R1 with different condition from the above, formula is as follows :

LED resistance value : R1[Ω], LED average consumption current : ILED[mA], Supply voltage : VLEDV_{CC}[V],
necessary d[cm] (Including LED's distribution within ±15deg)

$$R1 = T \times (VLEDV_{CC} - 4.45) / d^2 - 3.5 \text{ [}\Omega\text{]}$$

$$ILED = \text{Duty} \times (VLEDV_{CC} - 1.36) / (R1 + 2.5) \text{ [A]}$$

Duty : LED duty at emitting

T : 17300 (vs. RPM871-H12), 29400 (vs. ver1.0)

* Please set up to be ILED / Duty < 200[mA] (Duty < 20%)

●Notes

1) LEDV_{CC} (8pin) and V_{CC} (3pin)

- Other power source can be used difference between LEDV_{CC} and V_{CC}.

2) Caution in designing board lay-out

To get maximum potential from RPM871-H12, please keep in mind following instruction.

- The line of RXD (6pin) should be connected at backside via through hole close to RPM871-H12 pin lead. Better not to be close to photo diode side (1pin).

⇒This is to minimize feedback supplied to photo diode from RXD.

- As for C1 between 3-4 pin should be placed close to RPM871-H12.
- Better to be placed more than 1.0cm in radius from photo diode (pin1 side) and also away from the parts which generates noise, such as DC/DC converter.

3) Others

- Please be sure to set up the TXD (7pin) input to be "L" (under 0.55V) except transmitting data (for < 90μs, on duty < 20%).
- Power down current might increase if exposed by strong light (ex. direct sunlight) at powerdown mode.
- Please use by the signal format which is specified by IrDA Ver1.2 (2.4k to 115.2kbps). There might be on error if used by different signal format.

4) LED current derating and ambient temperature

The relation between LED peak current and maximum ambient temperature is shown below.

We recommend you to use within the range as indicated in below.

a) When glass-epoxy board (70×70×1.6mm) mounted.

b) RPM871-H12
