●Notes

1) V_{LEDA} (8pin), V_{CC} (3pin) and V_{IO} (2pin)

- Other power source can be used difference between V_{LEDA} and V_{CC} and V_{IO} .
($V_{IO} < V_{CC} + 0.3V$)

2) Caution in designing board lay-out

To get maximum potential from RPM872-H12, please keep in mind following instruction.

- The line of RXD (6pin) should be connected at backside via through hole close to RPM872-H12 pin lead. Better not to be close to photo diode side (1pin).

⇒This is to minimize feedback supplied to photo diode from RXD.

- As for C1 between 3-4 pin should be placed close to RPM872-H12.
- Better to be placed more than 1.0cm in radius from photo diode (pin1 side) and also away from the parts which generates noise, such as DC/DC converter.

3) Others

- Please be sure to set up the TXD (7pin) input to be "L" (under 0.3V) except transmitting data (for $< 90\mu s$, on duty $< 20\%$).
- Power down current might increase if exposed by strong light (ex. direct sunlight) at powerdown mode.
- Please use by the signal format which is specified by IrDA Ver1.2 (Low Power).
- There might be on error if used by different signal format.
- Please pay attention to the lens carefully. Dusts of scratch on the lens may effect the characteristics of product. Please handle it with care.

4) Eye safe

- IEC825-1 (EN60825-1) Class 1 Eye Safe.
