Cable Ties and Installation Tooling

Available Styles

PAN-TY® Cable Ties, Clamp Ties, Marker Ties, Push Mount Ties, Lashing Ties	4-21
DOME-TOP™ BARB-TY™ Cable Ties, Clamp Ties	22-26
SUPERFLEX™ Cable Ties	27
IN-LINE Cable Ties	27-28
Specialty Ties (Hook & Loop, Stud & Chassis/Panel Mount, Double Loop, Umbrella Push Mount, PAN-POUCH, Marker Strap, Aerial Support)	29
Cable Ties Kits	42
Cable Ties Installation Systems (manual/automatic)	43-55

Available Materials

Nylon 6.6 Cable Ties	5-10
Heat Stabilized Nylon 6.6 Cable Ties	11-12
Weather Resistant Nylon Cable Ties	13-17
Polypropylene Cable Ties	18
Flame Retardant Nylon 6.6 Cable Ties	19
Weather Resistant Nylon 12 Cable Ties	19
HALAR [▲] and TEFZEL [■] Cable Ties	20
TAK-TY™ Hook & Loop Ties	29

Additional Information

Convenient Small Packages of Cable Ties	12
Lashing Ties	6-7 & 14-15
Custom Hot Stamping	35
Color and Material Availability of Cable Ties	36-39
Bulk Package Part Numbers	40-41
Selecting the Proper Cable Tie	56-68
Cable Tie Packaging	70-71

Stainless Steel Products

PAN-STEEL™ Stainless Steel Tie	73
Stainless Steel Installation Tools	74
Metal Marker Plates/Tags/Marking Devices	74-75
Stainless Steel Strapping	76

Wiring Accessories

Cable Tie Accessories	78
Wiring Accessories (used without cable ties)	101-114
Selection and Use of Adhesive Mounts	115-120
Harness Board Accessories	121-126
Abrasion Protection Products	129-143

World Leader in Cable Ties and Wiring Accessories

Panduit is the world's largest producer of cable ties and wiring accessories, offering the most complete selection of sizes, styles and materials. We continually provide new cable tie and wiring accessory designs to meet the changing application challenges encountered by our customers while providing lowest installed costs.

Panduit also offers the largest selection of ergonomic cable tie installation tools—from high speed automatic systems to hand operated tools. So, whatever the need, Panduit has the tool to help lower your total installed cost.

Assured Quality

To help assure optimum quality, Panduit products are designed and manufactured to meet applicable international, UL, military and customer standards:

ISO 9000

The International Standards Organization (ISO) establishes worldwide standards for products and services in recognition of increasing globalization of markets. The ISO program sets up the requirements for quality assurance systems of these worldwide standards. Panduit is registered to ISO 9001, the most comprehensive model in the standard, meant for companies who design, manufacture, install and service the products they sell. Registration has been awarded by Underwriters' Laboratories (Certificate No. A2269) after extensive audit of QA systems employed at Panduit.

Underwriters' Laboratories, Inc. (File E56854)

Most Panduit miniature, intermediate, standard, light heavy and heavy cross-section ties are Recognized or Listed by Underwriters' Laboratories in their Directory under the category "Wire Positioning Devices" (ZODZ(2)). Natural, pigmented and weather resistant cable ties are recognized for indoor use at temperatures up to 85 °C (185°F). Heat stabilized ties are U.L. recognized for indoor use at temperatures up to 105°C (221°F).

Military Specification: MIL-S-23190E

Military Specification MIL-S-23190E covers the actual test requirements on cable ties. Panduit cable ties, when tested, either meet or exceed the requirements of this specification.

Nuclear Regulatory Commission

The NRC developed rules and regulations concerning Quality Assurance Criteria for Nuclear Power Plants or Title 10, Chapter 10, Part 50, Appendix B (10CFR50). Panduit Corp's Quality Assurance program is designed to satisfy the 18 criteria set forth in NRC 10CFR50, Appendix B, Military Specification MIL-Q-9858A.

Ford Motor Company

Panduit has received Q1 certification status from Ford Motor Company. Q1 certification enables all Panduit cable tie manufacturing facilities to approve all initial samples and production shipments of the parts destined for Ford operations throughout the world.

PANDUIT® Styles of Cable Ties

Selection of Styles

PAN-TY® Cable Ties

This line offers the largest selection of styles, materials, and sizes. The ties are available in 6.6 nylon, nylon 12, polypropylene, HALAR[▲] and TEFZEL[■] material. Available in sizes from .60" (15mm) maximum bundle diameter up to 13" (330mm) maximum bundle diameter. All are self-locking and many sizes are available in both releasable and non-releasable types. **PAN-TY** Cable Ties are quickly installed by hand or with **PANDUIT** installation tools.

DOME-TOP® BARB-TY® Cable Ties

These cable ties provide consistent performance and reliability for those users who prefer a cable tie with a stainless steel locking barb. They are infinitely adjustable through their entire bundle range. On selected popular sizes, the additional length of **BARB-TY** Cable Ties provides an average of 30% more bundle area than other metal barb cable ties. Available in sizes from .90" (23mm) maximum bundle diameter up to 9.0" (229mm) maximum bundle diameter and may be installed by hand or with **PANDUIT** installation tools.

Specialty Ties

Panduit continually develops new products to help solve the unique application problems of our customers. One of these products is the aerial support tie which typifies the design/manufacturing capability of Panduit to respond to these special needs.

Stainless Steel Ties and Strapping

Underground, underwater, indoors, outdoors—however hostile the environment—**PANDUIT** Stainless Steel Ties and Strapping let you fasten and identify components and cables quickly and easily. Stainless steel ties stand up to most chemicals, to nuclear and ultraviolet radiation, to seawater and direct burial in any soil, and to temperature extremes from -112°F to 1700°F (-80°C to 925°C).

Other countries, see the Home Page for local Sales Office information

PAN-TY® Cable Tie Features/Benefits:

1. ONE PIECE CONSTRUCTION

- Consistent performance and reliability.
- Available in lengths from 2.8" (71mm) up to 43.3" (1100mm) to meet a variety of application requirements.

2. SMOOTH, ROUND EDGES

- No irritation to installer's hands, increases productivity.
- Prevents damage to wire insulation.

3. TENSILE STRENGTH

- Exceeds Industry and Military (MIL-S-23190E) standards
- Available in seven loop tensile strengths from 8 lbs. (36N) up to 250 lbs. (1112N) to provide an economical selection from which to choose.

4. CURVED TIP

- Orients tip toward head to speed installation—lowers installed cost.
- Faster initial threading.
- Easier to pick up from flat surfaces.

5. FINGER TIP GRIP

- Finger tip grip on selected sizes assures positive grip during threading of the tie.
- Grip prevents tip from slipping out of cable tie head during threading.

6. MORE TEETH PER INCH

- Greater number of small uniform teeth provides tighter bundles.
- Because they're flush with surface they provide proper wire bundle grip without wire insulation damage.

7. LOW THREADING FORCE

- Lowest threading force of any one-piece cable tie in the industry.
- Reduces operator fatigue.
- Thin tapered tip facilitates threading, easier initial insertion.

8. ONE PIECE LOCKING DESIGN

- Multiple locking tooth design provides greater strength and reliability.
- Available in self locking or releasable styles for use in applications where changes are anticipated.

9. MATERIAL AVAILABILITY

- Available in a variety of materials to meet the needs of special environments.
- Properly selected ties can be used indoors or outdoors with assurance of long lasting performance.

PANDUIT® Nylon 6.6 Locking Cable Ties (PLT Series)

PAN-TY® Nylon 6.6 Locking Cable Ties

These versatile fasteners can be used in countless applications wherever you need to bundle wire, cable, or hose. They tie bundle diameters up to 13 inches (can also be joined together for even larger diameters) and have minimum loop tensile strengths from 12 to 175 pounds. Colors are available for specific color-coding applications ([See Page 37 to 39](#) for color and material availability chart).

All PLT cable ties (except -DTP, -XMR, -VMR, -5K, heavy and extra heavy cross section) have curved tip design for faster threading.

PAN-TY® Releasable Nylon 6.6 Cable Ties

The extended tab end of releasable cable ties permits easy release and reuse even after tie has been pulled up snug by hand. Releasable ties are particularly useful in harnessing where changes are anticipated during development, production or servicing in the field.

PANDUIT® Nylon 6.6 Winged Push Mount Ties (PLWP Series)

PAN-TY® Nylon 6.6 Push Mount Ties

Push mount ties are used to attach a bundle to another surface such as a control panel. The mount portion is easily pressed into a pre-drilled hole and locks in place. Push mount tie wings provide constant tension when installed in less than maximum panel thickness creating a stable, secure fixture and rattle-free installation.

Winged Push Mount Ties

PANDUIT® Heat Stabilized Nylon 6.6 Push Mount Ties

PAN-TY® Center Mounted Heat Stabilized Nylon 6.6 Wing Push Mount Ties

Center-mounted wing push-mount cable ties center the bundle on all bundle diameters.

PLWP30, 40 50SC winged push-mount cable ties are for normal wire bundles.

PLWP30, 40, 50SD winged push-mount cable ties with convoluted tubing bump that prevents lateral and axial movement on convoluted tubing.

PLWP30, 40, 50SE winged push-mount cable ties with convoluted tubing bump that prevents lateral movement on convoluted tubing.

PANDUIT® Weather Resistant Cable Ties

PAN-TY® Weather Resistant Nylon Cable Ties

Weather resistant nylon has greater resistance to ultraviolet light which damages natural nylon. Where adverse outdoor conditions exist, see technical/application data section ([Page 58 to 62](#)) to select proper cable tie material for specific applications.

For Outdoor Use

PANDUIT® Weather Resistant Cable Ties

Releasable Cable Ties (PRT Series)

The extended tab end of releasable cable ties permits easy release and reuse even after tie has been pulled up snug by hand. Releasable ties are particularly useful in harnessing where changes are anticipated during development, production or servicing in the field.

To release, grasp the head of the cable tie, deflect release tab and pull the cable tie away from the bundle.

PANDUIT® HALAR[▲] and TEFZEL[■] Cable Ties

PAN-TY® HALAR Fluoropolymer Cable Ties for Plenum Wiring

HALAR cable ties meet NEC recommendations for bundling qualified cable without conduit in plenum spaces. HALAR cable ties have a low smoke density rating and excellent flammability rating (U.L. 94V-0). Other applications include nuclear plants, chemical environments, telecommunications equipment, aerospace, high and low temperature environments. HALAR cable ties have distinctive maroon color.

PAN-TY® TEFZEL Fluoropolymer Cable Ties

TEFZEL cable ties are ideal for applications requiring resistance to environmental stresses such as chemical attack, gamma radiation, ultraviolet radiation and extreme temperatures. In addition, TEFZEL has a U.L. Flammability rating of UL94V-0. TEFZEL ties have distinctive aqua blue color. TEFZEL cable tie mounts appear on [Page 84](#).

PAN-TY® Marker Ties for Intrinsically Safe Wiring

Intrinsically safe wiring is defined as “wiring which is incapable of releasing sufficient electrical or thermal energy to cause ignition of the specific surrounding atmosphere.” The special blue color, which meets IEC standards, indicates that the marked circuits are intrinsically safe.

PANDUIT® DOME-TOP® BARB-TY® Cable Ties

DOME-TOP® BARB-TY® Cable Tie Features/Benefits

1. STAINLESS STEEL BARB

- Made of 316 corrosion resistant stainless steel
- Provides consistent performance and reliability for users who prefer a cable tie with a metal barb
- Infinitely adjustable for tight bundles through its entire bundle range

2. LOW THREADING FORCE

- Reduces installer fatigue
- Increases productivity

3. HIGH TENSILE STRENGTH

- Exceeds industry and military (MIL-S-23190E) standards
- Available in four loop tensile strengths from 18 lbs. (80N) to 120 lbs. (534N) to provide a wide selection

4. ANTI-SLIP STRAP BODY

- Ribbed and stippled strap body prevents axial and lateral movement

5. FINGER TIP GRIP

- Exclusively designed finger grip is available on all sizes of **DOME-TOP BARB-TY** Cable Ties to assure positive grip during threading of the tie

6. ANTI-SPRING BACK TIP

- Tip engages when inserted into head

7. CURVED TIP

- Orients tip toward head to speed installation; lowers installed cost
- Faster initial threading
- Easier to pick up from flat surfaces

8. MATERIAL/SIZE AVAILABILITY

- Available in lengths from 4.0" to 30.7" to meet a variety of applications
- Several materials available for special environments: Natural 6.6 nylon, weather resistant black 6.6 nylon, heat stabilized 6.6 nylon and 11 different colors

9. TEMPERATURE RATINGS

	Natural 6.6 Nylon and Weather Resistant 6.6 Nylon	Heat Stabilized 6.6 Nylon
Max.	185°F (85°C)	221°F (105°C)
Min.	-40°F (-40°C)	-40°F (-40°C)

PANDUIT® DOME-TOP® BARB-TY® Cable Ties

DOME-TOP® BARB-TY® Nylon 6.6 Locking Cable Ties

- Available in Miniature, Intermediate, Standard and Light Heavy Cross Section
- Bundle diameters up to 9.00" (229mm)
- Available in natural, weather resistant and heat stabilized nylon and 11 different colors
- Tool or hand installed

PANDUIT® SUPERFLEX™ Nylon 6.6 Cable Ties

SUPERFLEX™ Nylon 6.6 Cable Ties

Featuring the world's longest one-piece nylon cable tie—58.50"

Lightweight ties are super flexible to conform to bundle. Unique design provides high strength, increased impact resistance and dimensional stability for improved clamping.

Also available in weather resistant 6.6 nylon. Add suffix -0, i.e. SLT8LH-L0 and SLT10LH-L0. Most commonly used parts appear in **BOLD.

IN-LINE Nylon 6.6 Cable Ties

IN-LINE ties have serrations on the outside which allow the strap body to be inserted parallel to the strap head. Tie conforms to large bundles better than conventional ties. Available in weather resistant 6.6 nylon (-0). May be installed with **PANDUIT** GS4H cable tie installation tools.

PANDUIT® *IN-LINE* Nylon 6.6 Cable Ties

IN-LINE Nylon 6.6 Cable Ties For Installing Foam Padding On Playground Applications

NOTE: *IN-LINE* Clamp Ties are installed with the teeth on the inside and against the foam.

- Features
 - No protruding head to cause injury since head is inverted
 - No protruding tie tip to cause injury since the tip is trapped between the tie and foam
 - Tie will not slip on the foam since the head will indent the foam to remain captive
 - Wide tie body, .350" (9mm) for improved aesthetics
 - Cannot over-tension tie causing bulges in the foam
 - Easy Installation: No installation tools required
 - Flexible and easy to handle
 - No need to heat weld the ends closed
 - No cutoff scrap pieces to handle or pick up
- Strong: 124 lb. loop tensile strength
- Locking wedge is protected from unlocking and from ultraviolet light exposure
- Available in 13 ultraviolet colors that will last 2 to 3 times longer than normal pigmented colors
- Color coordinated to match foam

TAK-TY™ Cable Ties HLC, HLT, HLM & HLS Series

These handy hook & loop, woven material ties are very easy to release and reuse, making them ideal for applications where changes are anticipated or continuous access is required. These products are also great for applications where over-tightening is a concern and they will not pinch or abrade wires.

HLC Series

PANDUIT® Specialty Ties

PANDUIT® Specialty Ties Umbrella Winged Push Mount Cable Ties

The tie's anchor barb clicks into a clearance hole in a light gauge metal or plastic panel, no screws or other fasteners required. The umbrella shaped disc stabilizes the anchor barb and insures a tight, rattle-free fit. In addition, the umbrella disc provides a dust-tight and semi-liquid tight seal against the panel surface. The material is heat stabilized black resin.

PANDUIT® Specialty Ties

PANDUIT® Specialty Ties PAN-POUCH™ Telephone Cable Identification Kit

The **PAN-POUCH** system provides a fast, convenient method of identifying binder groups on both sides of a splice in PIC cable. It consists of striped **PAN-TY**® Cable Ties in 25 color combinations which match the universally accepted Even-Count Color Code. In addition, solid color ties are available for identification of "Super Groups" in cable containing more than 600 pairs. Cable ties have maximum bundle diameter of .82" (20.8mm). Each 50 pc. package fits into **PAN-POUCH** or Pocket Pouch.

CM4S-L8	Gray					50	500

Unique design allows strap to be used as:

WRAP-AROUND MARKER (Min. Dia.: 1.27")

"FLAG" MARKER (Min. Dia.: .25")

Weather Resistant Polypropylene Aerial Support Tie

With integral 1/2" spacer

Designed to attach coax or telephone cable to the support strand (1/4" or 5/16") to form the expansion loop and keep equipment and cables clear of pole hardware. One-piece construction with integral spacer reduces inventory costs of separate spacer and bands and installs faster to lower the installed cost. Releasable and reusable.

PANDUIT® Custom Hot Stamping

PANDUIT® Custom Hot Stamping Program

- Economical
- Convenient
- 1/8" (3mm), 3/16" (4.8mm), 5/64" (2mm) & 7/64" (2.8mm) characters are available
- Standard Type Style: News Gothic
- Character sizes can be mixed from line-to-line
- Alphanumeric and sequential numbering for serialization are available
- Six digit sequential numbering is available in 3/32" (2.4mm) or 9/64" (3.6mm) characters
- Seven digit sequential numbering is available in 1/8" (3mm) characters
- Seven colors of hot stamping to make your message stand out — Black, Blue, Green, Red, Yellow, Orange and White
- Special logos, type styles and sizes can be provided (when camera ready artwork is supplied)
- Minimum order: 1,000 pieces per part number and message

A custom program to mark nylon cable ties, marker ties and marker plates to suit your application requirements. . .

PANDUIT® Cable Tie Kits

Cable Tie Kits in Plastic Boxes KP-506A/KP-506-0 Cable Ties and Accessories Kit

KP-509 Designer's Kit

Cable Tie Kits in Steel Boxes K-504 Cable Ties and Accessories Kit

K-205 Cable Ties and Terminal Kit

Part Number	Description	Std. Pkg. Qty.
KP-506A	Contains natural nylon ties for indoor use: (100) PLT1M-C Cable Ties (100) PLT1.5I-C Cable Ties (100) PLT2S-C Cable Ties (50) ABM2S-A Mounts (1) KP-505 Plastic Kit Box	1
KP-506A-0	Contains weather resistant cable ties and mounts for outdoor use: (100) PLT1M-C0 Black Weather Resistant Cable Ties (100) PLT1.5I-C0 Black Weather Resistant Cable Ties (100) PLT2S-C0 Black Weather Resistant Cable Ties (50) ABM2S-AT-0 Black Weather Resistant Mounts (1) KP-505 Plastic Kit Box	1
KP-509	A special collection of cable ties and wiring accessories for prototyping and new product development Contains (over 600 pieces): Including PAN-TY ® Cable Ties (in different styles, sizes, colors and materials); 25 different cable tie mounts; 30 different wiring accessories; (1) KP-510 plastic kit box	1
KB-550	Assortment Pack contains natural and weather resistant PAN-TY nylon cable ties: (15) PLT1M-C Cable Ties (10) PLT1M-C0 Black Weather Resistant Cable Ties (15) PLT1.5I-C Cable Ties (10) PLT1.5I-C0 Black Weather Resistant Cable Ties (15) PLT2S-C Cable Ties (10) PLT2S-C0 Black Weather Resistant Cable Ties (15) PLT3S-C Cable Ties (10) PLT3S-C0 Black Weather Resistant Cable Ties	1
KB-551	Assortment Pack contains natural and weather resistant DOME-TOP ® BARB-TY ® nylon cable ties: (15) BT1M-C Cable Ties (10) BT1M-C0 Black Weather Resistant Cable Ties (15) BT1.5I-C Cable Ties (10) BT1.5I-C0 Black Weather Resistant Cable Ties (15) BT2S-C Cable Ties (10) BT2S-C0 Black Weather Resistant Cable Ties (15) BT3S-C Cable Ties (10) BT3S-C0 Black Weather Resistant Cable Ties	1
K-504	Contains cable ties, adhesive backed mounts and cable tie installation tool: (100) PLT1M-C Cable Ties (100) PLT1.5I-C Cable Ties (100) PLT2S-C Cable Ties (100) PLC2S-S10-C Clamp Ties (100) TM2S8-C Mounts (100) ABM2S-A-C Mounts (1) STS2 Tool (1) K-503 Steel Kit Box	1
SR2	2-Drawer Slide Rack to hold K-504 Kit or K-1100 Series Terminal Kits See Panduit Terminal Catalog, SA101N21A.	1
SR4	4-Drawer Slide Rack to hold K-504 Kit or K-1100 Series Terminal Kits See Panduit Terminal Catalog, SA101N21A.	1
SR6	6-Drawer Slide Rack to hold K-504 Kit or K-1100 Series Terminal Kits See Panduit Terminal Catalog, SA101N21A.	1
SRB	Base accommodates SR2, SR4 and SR6 Slide Racks	1
K-205	Contains 300 cable ties, 600 terminals and 2 installation tools: (100) PLT1M-C Cable Ties (100) PLT1.5I-C Cable Ties (100) PLT2S-C Cable Ties (1) GS2B Cable Tie Installation Tool (100) PV18-6LF-C Terminals (100) PV14-8LF-C Terminals (100) PV14-10LF-C Terminals (50) PV10-10LF-C Terminals (100) BSV18X-C Splices (100) BSV14X-C Splices (50) BSV10X-C Splices (1) CT-100 Crimping Tool (1) K-200 Steel Kit Box	1

PANDUIT® Cable Tie Installation Tools

Cable Tie Installation Tools

The PANDUIT Selection. . .

Panduit offers the greatest selection of job-matched tools.

PAT1M/PAT1.5M Automatic Cable Tie Installation Systems

PAT2S Automatic Cable Tie Installation System

PET1M/PET1.5M Portable Automatic Cable Tie Installation Systems

Pneumatic Tool Controlled Tension and Cutoff Tools

Tool Controlled Tension and Cutoff Tools

Operator Controlled Tension and Cutoff Tools

Choosing the right tool increases productivity. . .

Whatever the need; Original Equipment Manufacturer (high, medium, low volume), maintenance/repair or construction; Panduit has the tool to help lower your total installed cost. The following chart can be used as a guide for tool selection:

Tool	Cable Tie Cross Section	Cable Tie Usage		Operation	Typical Application(s)
		Per Minute	Per Year		
PAT1M/PAT1.5M Systems (Automatic)	Min.	30-40	200,000-1,000,000	Pneumatic/ Electric	High Volume OEM tie usage
PAT2S System (Automatic)	Std.	28-33	200,000-1,000,000		
PET1M/PET1.5M Systems (Automatic)	Min.	25-35	100,000-500,000	Electric	Medium to High Volume OEM tie usage
PPTS	Min., Int. or Std.	5-8	25,000-150,000	Pneumatic	Medium to High Volume OEM tie usage where a variety of tie sizes are needed.
PPTEH	Lt. Hvy., Hvy. or Ex. Hvy.				
GS2B/GS2BL	Min., Int. or Std.	4-6	Under 50,000	Hand	Low to Medium Volume OEM tie usage, maintenance/repair or construction
GS4H	Std. Lt. Hvy. or Hvy.				
GS4H/B	Lt. Hvy. or Hvy.				
GS4H121W	Lt. Hvy. or Hvy.				
GS4EH	Lt. Hvy., Hvy. or Ex. Hvy.				
STS2	Min., Int. or Std.	1-4	Under 10,000	Hand	Maintenance/repair or construction
STH2	Std., Lt. Hvy. or Hvy.				
ST2EH	Lt. Hvy., Hvy. or Ex. Hvy.				
STHV	Lt. Hvy. or Hvy.				

PANDUIT® Fully Automatic Cable Tie Installation Systems

Automatic Cable Tie Installation Systems

PANDUIT automatic tooling makes everything else obsolete. With the squeeze of a trigger, it applies, tensions, and cuts off the excess cable tie—*all in less than 1 second*. Automatic tooling will reduce your labor costs, minimize your total installed cost.

There are three tool systems to meet your needs:

1. PAT1M/PAT1.5M — Automatic Cable Tie Installation Systems (*Pages 46 & 48*) (Stationary Dispenser)

Installs Miniature Cross Section Cable Ties (18 lb. (80N) minimum loop tensile)

2. PAT2S — Automatic Cable Tie Installation System (*Pages 47 & 48*) (Stationary Dispenser)

Installs Standard Cross Section Cable Ties (50 lb. (222N) minimum loop tensile)

3. PET1M/PET1.5M — Automatic Electric Cable Tie Installation Systems (*Pages 50 & 51*) (Portable Hand Held Tool)

Installs Miniature Cross Section Cable Ties (18 lb. (80N) minimum loop tensile)

PANDUIT® Fully Automatic Cable Tie Installation Systems

1. PAT1M/PAT1.5M Reel-Fed Systems for Miniature Cross Section Cable Ties (18 lb. (80N) minimum loop tensile)

- The system consists of the tool, dispenser, feeder hose and reel-fed continuously molded cable ties (5000 ties per reel). Each system will install a cable tie in less than one second.
- Choice of two tool head sizes for bundle diameters up to .82" (21mm) or up to 1.3" (33mm)
- The dispenser and hose are designed to operate with either tool head for maximum versatility and economy.
- The system design permits complete mobility in the use of the tool and location of the dispenser.
- The system operates on 65 psig. non-lubricated, filtered air and 100 VAC, 120 VAC and 230 VAC.
- Optional bench mount shown on [Page 48](#).

Tool Heads

Part Number	Description	Pkg. Qty.
PAT1M	Tool head for cable ties up to .82" (21mm) bundle diameter (PLT1M-XMR)	1
PAT1.5M	Tool head for cable ties up to 1.3" (33mm) bundle diameter (PLT1.5M-XMR)	1
	<ul style="list-style-type: none"> • Lightweight, no counter-balance required • Slim, ergonomically designed handle for operator comfort and greater productivity. Reduces potential for repetitive motion injuries • Right or left hand operation • Durable, one-piece cable tie tip collector (for cut-off tips) • Includes tension adjustment 	

Dispenser

PDM	Stationary dispenser for 100 VAC, 120 VAC and 230 VAC	1												
	<ul style="list-style-type: none"> • The dispenser monitors performance. If an error occurs an alarm is sounded • On-line HELP menu • Multi-language capability via LCD display (English, Spanish, German, Italian or French) • Cable tie reels are easily loaded into the dispenser, reducing downtime • Audible reload signal when reel is empty • Minimum maintenance required • Power cord included 													
	<table border="1"> <thead> <tr> <th colspan="2">Specifications</th> </tr> </thead> <tbody> <tr> <td>Pneumatic</td> <td>Electrical</td> </tr> <tr> <td>• Operates at 65 psig minimum</td> <td>• 100, 120, or 230 VAC</td> </tr> <tr> <td>• 7 scfm flow minimum</td> <td>• 50/60 Hz.</td> </tr> <tr> <td>• Operates on non-lubricated air.</td> <td>• Less than 1 amp</td> </tr> <tr> <td></td> <td>• Approx. 20 watts (AVG)</td> </tr> </tbody> </table>	Specifications		Pneumatic	Electrical	• Operates at 65 psig minimum	• 100, 120, or 230 VAC	• 7 scfm flow minimum	• 50/60 Hz.	• Operates on non-lubricated air.	• Less than 1 amp		• Approx. 20 watts (AVG)	
Specifications														
Pneumatic	Electrical													
• Operates at 65 psig minimum	• 100, 120, or 230 VAC													
• 7 scfm flow minimum	• 50/60 Hz.													
• Operates on non-lubricated air.	• Less than 1 amp													
	• Approx. 20 watts (AVG)													

Feeder Hose

(choose one)

PHM1	3.2 ft. (1 meter) Feeder hose	1
PHM2	6.5 ft. (2 meter) Feeder hose	1
PHM3	9.8 ft. (3 meter) Feeder hose	1
	<ul style="list-style-type: none"> • Transfers cable ties and signal from dispenser to tool • Available in three lengths for either tool head • Reversible • Large electrical connectors, quick & easy connections 	

Other Components

PDH10-37	Main air supply hose (regulator to dispenser). 9.8 ft. (3m). Includes a 3/8" NPT male thread (to regulator) and 3/8" female quick-disconnect (to dispenser)	1
PL283N1	Filter/regulator 25 micron (max.) element, 5 psi (max.) pressure drop @ 85 psig inlet pressure and 16 cfm flow @ 85 psig; 3/8" ports	1

PANDUIT® Automatic Cable Tie Installation Systems

2. PAT2S Reel-Fed System for Standard Cross Section Cable Ties (50 lb. (222N) minimum loop tensile)

Automatically installs cable ties on bundles of up to 2" (51mm) in diameter.

- The system consists of the tool, dispenser, dispenser frame, feeder hose and reel-fed continuously molded cable ties (2500 ties per reel).
- The PAT2S System installs PLT2S-VMR continuously molded cable ties in approximately 1 second. Reload time is minimized by large reels of 2500 ties per reel.
- Ability to increase the tension of the cable ties provides greater resistance to lateral movement.
- High cable tie loop tensile strength of 50 lbs. (222N) minimum.

Tool Head

Part Number	Description	Pkg. Qty.
PAT2S	Tool head for cable ties up to 2" (51mm) bundle diameter (PLT2S-VMR) <ul style="list-style-type: none"> • Open jaw design • 1 trigger operation • Right or left hand operation • Tension adjustments are made without special tools • Minimum maintenance required • Operates in any orientation • Tip collector included • Lightweight counter balance optional 	1

Dispenser

PDS	Dispenser with Electronic Display <ul style="list-style-type: none"> • Cable tie reels are easily loaded into the dispenser, reducing downtime • Audible reload signal when reel is empty • LCD messages in 5 languages (English, French, German, Italian, Spanish) • Power cord included • Auto adjust for various domestic and international voltages 	1

Pneumatic	Electrical									
• Operates at 65 psig.	• 100, 115, 220, or 240 VAC									
• 7 scfm flow	• 50/60 Hz.									
• Operates on non-lubricated air.	• Approx. 100 watts (AVG)									
PDSF	Dispenser Frame/Reel Holder	1								

Other Components

PHS3	9.8 ft. (3m) feeder hose. Transfers cable ties and signal from dispenser to tool	1
PDH10-37	Main air supply hose (regulator to dispenser). 9.8 ft. (3m). Includes a 3/8" NPT male thread (to regulator) and 3/8" female quick-disconnect (to dispenser)	1
PL283N1	Filter/regulator 25 micron (max.) element, 5 psi (max.) pressure drop @ 85 psig inlet pressure and 16 cfm flow @ 85 psig; 3/8" ports	1
PAT2SBM	Bench mount and foot pedal for PAT2S System (shown on Page 48)	1

PATMBM Bench Mount used with PAT1M PAT1.5M Automatic Systems for Miniature Cross Section Cable Ties (18 lb. (80N) minimum loop tensile)

For Operations Where the Application is Brought to the Tool

- Used with either PAT1M or PAT1.5M tool head
- Supplied with a foot-actuated pedal to allow operator to work with both hands
- A tool can be installed in the mount in seconds
- Supplied with a four-hole base plate
- The bench mount operates on 65 psi non-lubricated, filtered air which pilots off of the dispenser.

In addition to tool head, dispenser, feeder hose and cable ties on reels; order the following:

Part Number	Description	Pkg. Qty.
PATMBM	Bench mount and foot pedal for PAT1M/PAT1.5M system, four-hole base plate.	1

PAT2SBM Reel-Fed Bench Mount Application used with PAT2S Automatic System for Standard Cross Section Cable Ties (50 lb. minimum loop tensile)

For Operations Where the Application is Brought to the Tool

- Used with PAT2S tool head.
- Supplied with a foot-actuated pedal to allow operator to work with both hands.
- A tool can be installed in the mount in seconds
- Supplied with a four-hole base plate.
- The bench mount operates on 65 psi non-lubricated, filtered air which pilots off of the dispenser.

In addition to tool head, dispenser, dispenser frame, feeder hose and cable ties on reels; order the following:

Part Number	Description	Pkg. Qty.
PAT2SBM	Bench mount and foot pedal for PAT2S system, four-hole base plate.	1

PANDUIT® Cable Ties for Automatic Installation Systems

Cable Ties for PAT1M/PAT1.5M Systems (Pages 46 & 48)

Cable Ties on

- Miniature cross section cable ties
- Self-locking
- U.L. Recognized
- 5000 ties/reel

Continuously molded cable ties in sizes, color and material options to meet the application.

Part Number	Color	Max. Bundle Diameter In. (mm)	Length In. (mm)	Width In. (mm)	Min. Loop Tensile Strength Lbs. (N)	Use with PANDUIT® Part No.
-------------	-------	-------------------------------	-----------------	----------------	-------------------------------------	----------------------------

Cable Ties for PAT1M/PAT1.5M Systems

6/6 Nylon (for indoor use) up to 185° F (85° C)							
Reels of 5,000 — 2 Reels/carton	PLT1M-XMR	Natural	.06-.82 (1.5-20.8)	4.0 (102)	.10 (2.5)	18 (80)	PAT1M

PLT1M-XMR30	Black	.06-.82 (1.5-20.8)	4.0 (102)	.10 (2.5)	18 (80)	PAT1M	
PLT1.5M-XMR30	Black	.06-1.30 (1.5-33)	5.6 (142)	.10 (2.5)	18 (80)	PAT1.5M	

Flammability Rating: U.L. 94V-2, ATB < sec. per ASTM-D635

Cable Ties for PAT2S System (Pages 47 & 48)

Cable Ties on Reels

- Standard cross section cable ties
- Self-locking
- U.L. Recognized
- 2500 ties/reel

Continuously molded cable ties in sizes and material options to meet the application.

The PAT2S system installs **PANDUIT** PLT2S-VMR locking cable ties. Cable ties are easily loaded or unloaded from the dispenser for quick reel changes, reducing downtime. Carrier strip connects 2500 ties in one continuous reel for long periods between reloads.

Part Number	Color	Max. Bundle Diameter In. (mm)	Length In. (mm)	Width In. (mm)	Min. Loop Tensile Strength Lbs. (N)	Use with PANDUIT® Part No.
-------------	-------	-------------------------------	-----------------	----------------	-------------------------------------	----------------------------

Cable Ties for PAT2S System

6/6 Nylon (for indoor use) up to 185° F (85° C)							
Reels of 2,500 — 2 Reels/carton	PLT2S-VMR	Natural	2.0 (50)	8.1 (206)	.190 (4.8)	50 (222)	PAT2S
	Heat-Stabilized Nylon (for indoor use) up to 221° F (105° C)						
PLT2S-VMR30	Black	2.0 (50)	8.1 (206)	.190 (4.8)	50 (222)	PAT2S	

Consult factory for color and weather resistant cable tie options.

Flammability Rating: U.L. 94V-2, ATB:5 sec., per ASTM-D635

3. PET1M/PET .5M Systems for Miniature Cross Section Cable Ties (18 lb. (80N) minimum loop tensile)

Completely portable, electric and automatic cable tie installation systems which install cable ties in less than one second, minimizing your total installed cost.

- Built for portability, the PET battery-operated tools are lightweight and have excellent balance and ergonomics. They can install cable ties in those areas that have been inaccessible by stationary tool systems.
- With the squeeze of the trigger, the PET tools install Panduit's continuously molded miniature cross section cable ties. The ties are available in strips of 50 or by the reel which allows the user to cut strips of custom lengths.

PET1M Tool Head

Part Number	Description	Pkg. Qty.
PET1M	Tool head for cable ties up to .82" (21mm) bundle diameter (PLT1M-5K) or (PLT1M-XMR) <ul style="list-style-type: none"> • Open jaw design • 1 trigger operation • Ergonomic and lightweight • 3 electric power options: rechargeable battery cartridge, rechargeable batterybelt and AC adapter • Adjustable tension • Anti-pinch jaws • On/Off switch with tool status • Auto shutoff • Tip collector included 	1

PET1.5M Tool Head

PET1.5M	Tool head for cable ties up to 1.3" (33mm) bundle diameter (PLT1.5M-5K) or (PLT1.5M-XMR) <ul style="list-style-type: none"> • Open jaw design • 1 trigger operation • Ergonomic and lightweight • 3 electric power options: rechargeable battery cartridge, rechargeable batterybelt and AC adapter • Adjustable tension • Anti-pinch jaws • On/Off switch with tool status • Auto shutoff • Tip collector included 	1

Cable Ties on Reels

2 reels of 5,000 ties/ctn.

PANDUIT® Pneumatic Hand Tools

Pneumatic Hand Tools

Tool-Controlled Tension and Cut-Off

Two tools cover the full line of **PANDUIT** Cable Ties for production applications. The tools pneumatically tension and cut off excess tie after it is hand-installed around the bundle, minimizing operator fatigue. Both tools are rugged, yet lightweight.

For PANDUIT Cable Ties up to 1/2" (12.7mm) wide.

- Easy to change tension adjustment
- Requires no special training to use
- Durable, lightweight, easy to operate and designed to reduce operator fatigue
- Tensions and cuts off excess tie in a fraction of a second
- Operates on non-lubricated air, without special maintenance
- New powder coat finish

PPTS and PPTEH Other Components

Part Number	Description	Pkg. Qty.
PPTS	Installs Miniature, Intermediate or Standard cross section cable ties Color identification: (knob) Black Weight: 18 oz. (510g) Replacement part kits can be part of a scheduled maintenance program	1
PPTEH	Installs Light Heavy, Heavy and Extra Heavy cross section cable ties. Color Identification: (knob) Blue Weight: 52 oz. (147g) Replacement part kits can be part of a scheduled maintenance program	1
PPH10	10 ft. (3m) Hose Assembly (regulator to tool). Includes a 1/8" NPT male connector (to regulator) and 1/8" female quick disconnect fitting (to tool).	1
PL289N1	Filter/Regulator .5 micron (max.) element, regulated range 3-100 PSIG, 1/8" ports	1

Note: PPTS and PPTEH tools require the PPH10 hose and PL289N1 Filter/Regulator for proper operation.

PANDUIT® Hand-Operated Tools

Hand-Operated Tools Tool-Controlled Tension and Cut-Off

The most preferred hand-operated cable tie tools in the industry. These tools are versatile and can be used for production, maintenance or construction applications. These tools will tension and cut off excess tie material to the head by squeezing trigger handle.

For PANDUIT Cable Ties up to 1/2" (12.7mm) wide

- Lightweight and balanced
- Requires no special maintenance
- Easy to change tension adjustment and easy to operate
- Proven features to help lower installed costs; a combination of design, operating and construction features provide a long service life
- Durable powder coat finish
- Replacement blades available

	Part Number	Description	Pkg. Qty.
	GS2B	Installs Miniature, Intermediate or Standard cross section cable ties. Qualified product listed per Mil. Std. MS90387-1 and Mil. Spec. MIL-T-81306A. Color Identification: Trigger Handle: Black Selector Knob: Black Weight: 10 oz. (284g)	1
	GS2BL	Same as GS2B except handle span is reduced 25% - for workers with smaller hands. Qualified product listed per Mil. Std. MS90387-1 and Mil. Spec. MIL-T-81306A. Color Identification: Housing is distinctive maroon color. Trigger Handle: Black Selector Knob: Black Weight: 10 oz. (284g)	1
	GS4H	Installs Standard, Light Heavy and Heavy cross section cable ties. Also installs SUPERFLEX™ (SLT) cable ties. Qualified product listed per Mil. Std. MS90387-2 and Mil. Spec. MIL-T-81306A. Color Identification: Trigger Handle: Red Selector Knob: Red Weight: 16 oz. (454g)	1
	GS4H/B	Installs Standard, Light Heavy and Heavy cross section cable ties. Also installs SUPERFLEX (SLT) cable ties. High tension, factory set, non-adjustable Color Identification: Trigger Handle: Blue Weight: 16 oz. (454g)	1
	GS4H121W	Installs Light Heavy and Heavy cross section cable ties. This tool provides greater tension, especially on 175 lb. strength ties, which results in tighter bundles. Color Identification: Trigger Handle: Green Selector Knob: Green Weight: 16 oz. (454g)	1
	GS4EH	Installs Light Heavy, Heavy and Extra Heavy cross section cable ties. Color Identification: Trigger Handle: Blue Selector Knob: Blue Weight: 16 oz. (454g)	1

PANDUIT® Hand-Operated Tools

PPTS, PPTEH, GS2B, GS2BL, GS4H, GS4H121W, GS4EH Tools Adjustment Features

Tension Indicator

Each cross section of cable ties can be installed with a variety of tensions to meet the application. The proper tensions (listed on **PANDUIT** cable tie packages) are clearly marked with this indicator.

Fast and Easy Selection

To change cross section, simply flip the knob to desired setting.

To change tension within the range of the cross-section, turn knob clockwise (shown) to increase, counterclockwise to decrease.

Tool Tension Lock Kit

Certain applications require a locking device on either the selector knob (one cross-section size and tension only) or tension level adjustment (but allowing cross-section size changes). This kit is available for that purpose.

Part Number	Description	Pkg. Qty.
TTLK3-X	Tool Tension Lock Kit Each kit contains (1) #--40 selection locking screw (with head), (1) selection locking clip, and (1) #4-40 tension locking screw (headless). <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;">  To lock selector knob and tension level </div> <div style="text-align: center;">  To lock fine adjustment </div> </div>	10
K2-BLD2	Blade Replacement Kit for GS2B (all versions) and PPTS	1
K4H-BLD	Blade Replacement Kit for GS4H (3-screw blade guard only)	1
KPPTEHB KPPTEHG	Blade Replacement Kit for PPTEH Gripper Replacement Kit for PPTEH	1 1
KPTSG	Gripper Replacement Kit for PPTS	1
GHH	Specifically designed to hold GS2B, GS4H (series) or PPTS tools. Used wherever the hand tools are used—construction sites to assembly lines for a convenient and handy place for the tool.	1

Repair Parts

Blade Replacement Kits and Gripper Replacement Kit

Can be part of a scheduled maintenance plan or use only when cutoffs are not clean and crisp.

Hand Tool Accessory

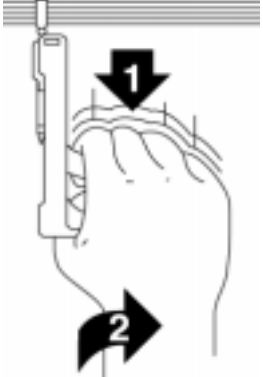

Holster

PANDUIT® Hand-Operated Tools

Hand Operated Tools Installer-Controlled Tension and Cut-Off

Panduit offers an economical series of tools for maintenance or construction applications—the user determines the required cable tie tension and the tools provide a cut-off. Used with the full line of **PANDUIT** Cable Ties.

Part Number	Description	Pkg. Qty.
	<p>Installs PANDUIT Miniature, Intermediate or Standard cross section cable ties. See STH2 operation below.</p> <p>Color Identification: Black Weight: 2 1/2 oz. (71g)</p>	1
 <ul style="list-style-type: none"> • Inexpensive, maintenance-free, all purpose tools • Ergonomic handle design and short handle span • Top loading feature for right or left-handed users 	<p>Installs PANDUIT Standard, Light Heavy or Heavy cross section cable ties.</p> <p>Color Identification: Red Weight: 2 1/2 oz. (71g)</p> <p>INSTALLATION PROCEDURE FOR STS2 AND STH2 TOOLS</p> <ol style="list-style-type: none"> 1. Install cable tie around bundle. Tension tie by squeezing tool handle. 2. Reduce tension slightly and twist tool 1/4 turn either direction for cut-off of cable tie. 	1
 <ul style="list-style-type: none"> • Durable all steel construction • Comfortable rubber handles 	<p>Installs PANDUIT Light Heavy, Heavy or Extra Heavy cross section cable ties.</p> <p>Color Identification: Black Handles Weight: 16 oz. (454g)</p>  <p>After installing tie around bundle and tensioning, tool is twisted a 1/4 turn "in either direction" to cut off excess tie.</p>	1
<p>KST2EHG</p>	<p>Gripper Replacement Kit for ST2EH.</p>	1
 <ul style="list-style-type: none"> • Durable all steel construction • "Travel stop" helps prevent pinched fingers 	<p>Installs PANDUIT Light Heavy and Heavy cross section cable ties. A separate lever cuts excess tie.</p>	1

Cable Tie Selection and Specification Guidelines

Selecting the Proper Cable Tie Material for Your Application

By using this information as a guide, the user will be better equipped to select the best suited cable tie and material to perform its intended function over a long period of time.

For long life and dependable service, there are many factors to consider when selecting the proper cable tie for each application. Since it is impossible for Panduit to provide data on all the various combinations of conditions which may arise, it is suggested that this data be used as a guideline and that sample cable ties be tested under actual end-use conditions to determine the correct cable tie for the application.

To select the optimum cable tie for a specific application, the following table can be used as a quick reference. First, determine the most critical design criteria and then read across the table to find which material is most suitable to meet this need (10 = Most Suitable and 1 = Least Suitable). Next, review the other criteria by scanning in a vertical direction on the chart and then make your final selection.

Design Criteria	Natural 6.6 Nylon	Weather Resistant 6.6 Nylon	Heat Stabilized Black 6.6 Nylon	Heat Stabilized Natural 6.6 Nylon	Heat Stabilized Weather Resistant 6.6 Nylon	Flame Retardant Black 6.6 Nylon	Flame Retardant 6.6 Nylon	Weather Resistant Nylon 12	Natural Polypropylene	Weather Resistant Polypropylene	TEFZEL*	HALAR†	Stainless Steel
Part Number Suffix Material Designation		-0	-30	-39	-300	-60	-69	-120	-109	-100	-76	-702	
Loop Tensile Strength	7	7	7	7	7	7	7	6	5	5	7	5	10
Low Temperature Service	6	6	6	6	6	5	5	6	6	6	7	7	10
High Temperature Service	5	5	6	6	6	5	5	5	5	5	8	7	10
Flammability	6	6	6	6	6	8	8	3	2	2	9	9	10

Relative Price	Low	Low	Low	Low	Med.	Med.	Med.	Med.	Low	Low	High	High	High

Example No. 1:

Application	Selection
If your application requires high radiation (2×10^5 rads) resistance, excellent resistance to hydrocarbons and the price is not critical.	Your best choice is TEFZEL or stainless steel. The price is higher than other materials, but both have high ratings in resistance to radiation and hydrocarbons.

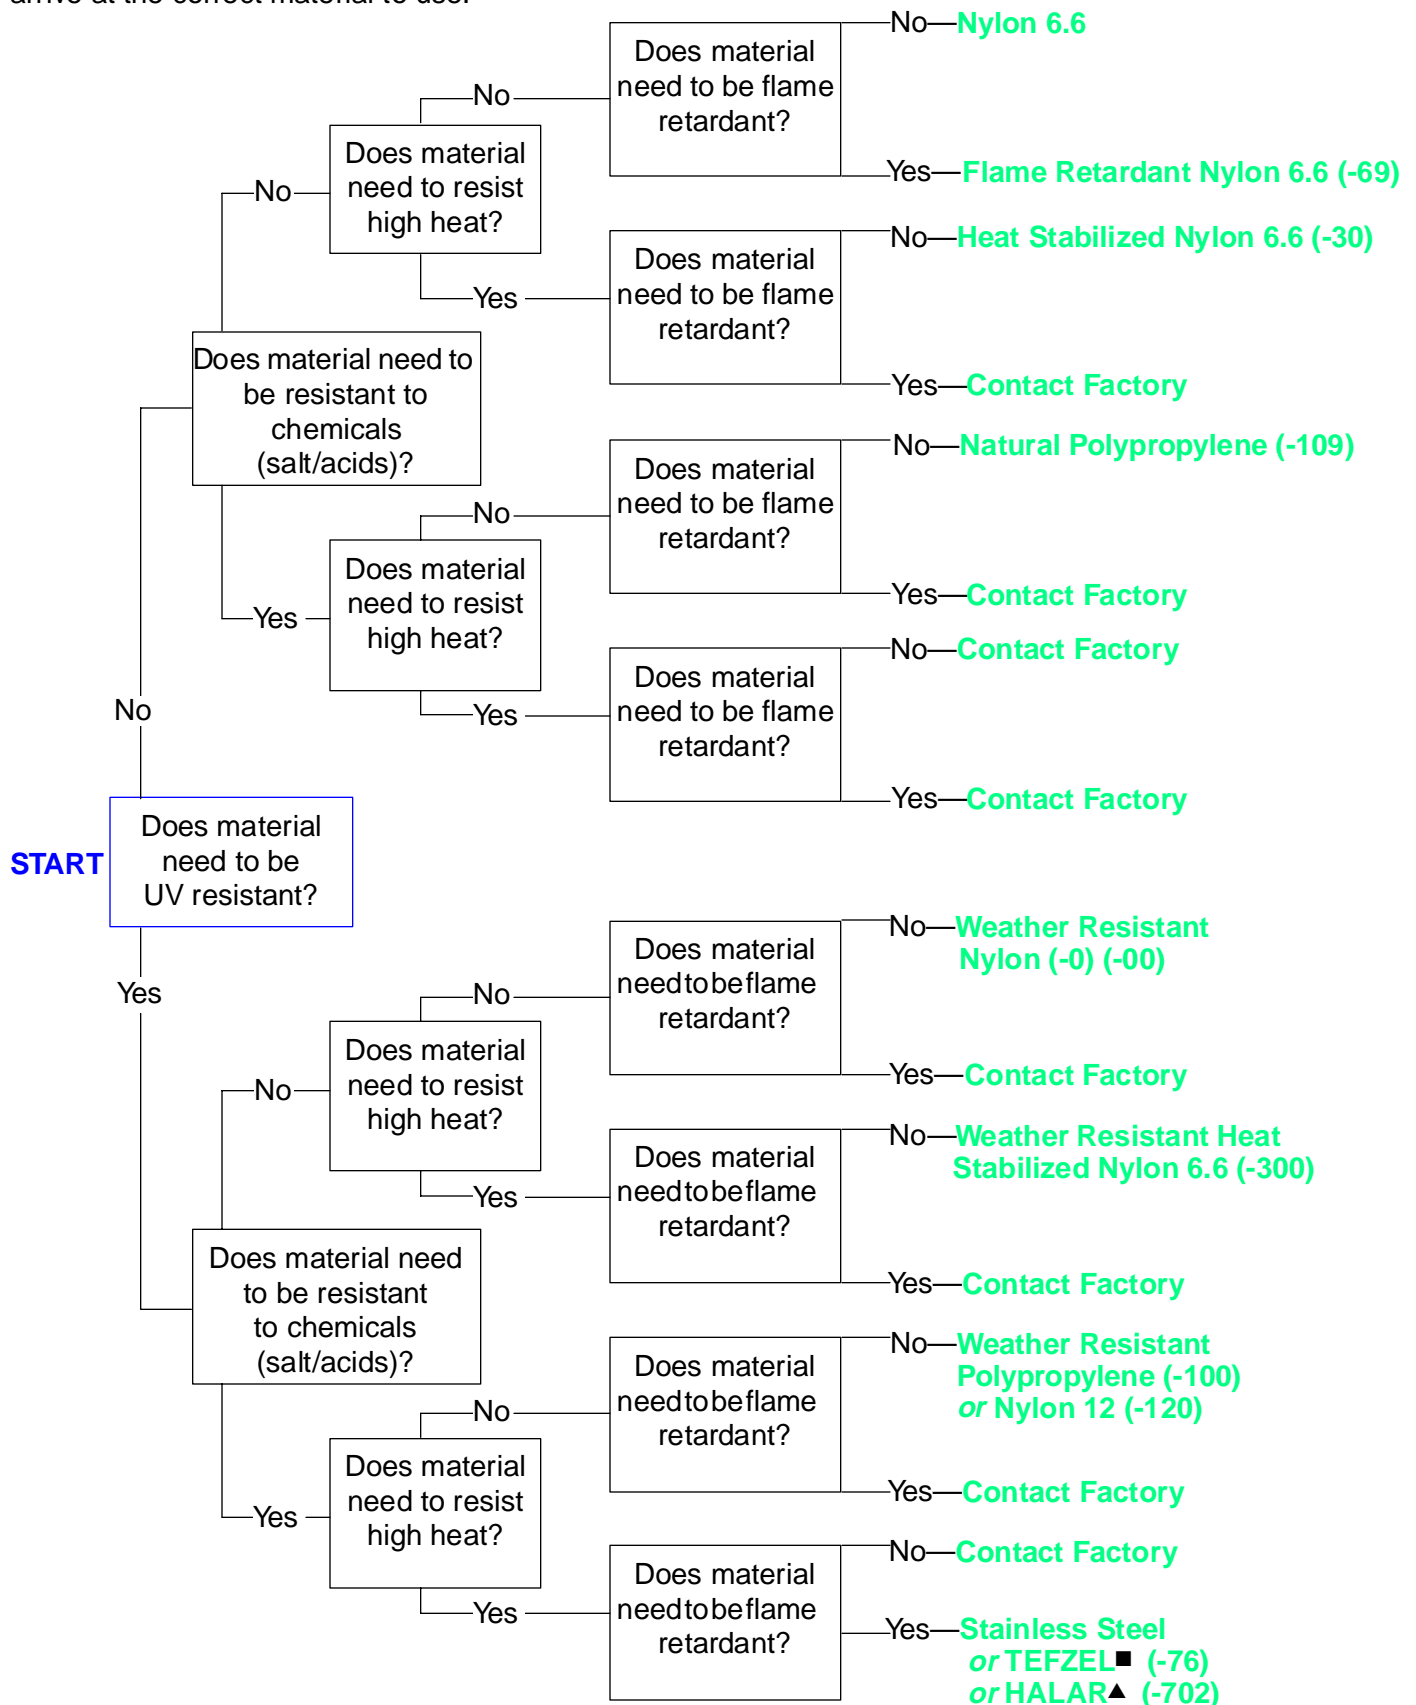

Example No. 2:

Application	Selection
If your application requires a low cost material, good ultraviolet resistance and good resistance to acid rains.	Your best choice is weather-resistant polypropylene which is less expensive, 6 rating in ultraviolet resistance and 9 rating on resistance to acids.

PANDUIT® Material Selection Guide

To select the proper cable tie for your application, start at the left of the chart and answer the “Yes” and “No” questions until you arrive at the correct material to use.

Suggested Material to use

Weathering

Weathering

Ultraviolet light (which is a component of sunlight) attacks, over a period of time, most plastic materials and reduces their properties by breaking the molecular chain. The material breakdown is accompanied by reductions in tensile strength and elongation, increased brittleness, color changes and loss of surface gloss.

Carbon black, which is used in **PANDUIT**® nylon and polypropylene cable ties, is one of the most effective stabilizers known today. A uniform dispersion of carbon black provides good ultraviolet light resistance without adversely affecting physical properties. The addition of carbon black, or any other ultraviolet light stabilizer, prolongs the useful life of plastic products used outdoors, but it does not totally eliminate the destructive effects of the light. Some plastics, such as TEFZEL[■] or HALAR[▲], are intrinsically very resistant to ultraviolet light and do not require stabilizing additives.

Weathering Test Methods

In order to monitor the effects of ultraviolet light and the effectiveness of ultraviolet stabilizers, Panduit, in conformance with industry standards, adopted two methods of weatherability testing: Outdoor Aging and Accelerated Weather Aging.

Outdoor Aging

The Outdoor Aging method is probably the best and most realistic method of the two. It is conducted in accordance with ASTM D1435-85 Recommended Practice for Outdoor Weathering of Plastics, and allows the material to be affected by not only ultraviolet light, but by all other outdoor elements as well. Although this may more closely approximate an actual application, two drawbacks do exist. The period of time required to produce property decay and material failure may be quite long and varying adverse chemical environments cannot be tested.

Accelerated Weather Aging

Accelerated weathering tests have been used in order to increase the rate of degradation due to a combination of ultraviolet light, temperature and moisture. The methods used are in accordance with the following standards:

- ASTM D1499-84, Operating Light and Water Exposure Apparatus (Carbon-Arc type) for exposure to plastics
- ASTM G53-84, Operating Light and Water Exposure (Fluorescent U.V. Condensation type) for exposure of non-metallic materials

The condition specified in ASTM D1499-84 utilizes a carbon arc to simulate natural sunshine and a water spray. The test chamber is operated 20 hrs/day with a two hour cycle of 108 minutes of simulated sunshine and 12 minutes of sunshine and water spray. The temperature of a black body inside the chamber is approximately 63°C (145°F) during the "Sunshine Only" portion of the cycle. Humidity is not controlled inside the chamber.

The test chamber per ASTM D53-84 uses fluorescent sun lamps to generate ultraviolet light only. A heated water pan produces condensation during a portion of the cycle. The daily cycle is composed of 20 hours of light followed by 4 hours of condensation. Black body temperatures during the light cycle are 50°C (122°F) and 40°C (104°F) during the condensation cycle.

Panduit has also designed a special chamber which is used to simulate the effect of acid rain and ultraviolet light on cable tie materials. The effect of other common chemicals, such as road salt, are also evaluated in this chamber.

These methods are effective in quickly determining the ultraviolet light resistance of the various cable tie materials, but it must be emphasized that there are no exact correlations between accelerated aging and actual outdoor exposure.

Weathering

Material Failure Testing

Property decay can lead to three different modes of failure: loss of strength, loss of toughness or change in appearance. The critical mode for any given application would depend upon the application and the requirements it places upon the material itself.

Loss of strength is monitored by tensile testing samples of the material before and after it has been weathered. This test will reveal the decreasing strength accompanied by extended weathering.

Loss of toughness can be monitored by measuring changes in elongation and impact strength. As ultraviolet light exposure time increases and the material becomes brittle, its elongation and impact strength are greatly reduced. It is important to note that brittle failures can occur even when the tensile strength shows no change.

Although change in appearance is normally not a failure mode for cable ties, the plastic does tend to discolor and lose its surface gloss as exposure increases. These changes can be measured by color difference using Adams units which are similar to National Bureau of Standard units.

Panduit has its own weathering test program to determine estimated life of various cable tie materials. This includes examining many previously aged samples obtained throughout the world.

In all cases, the amount of property decay increased with increasing exposure to ultraviolet light. The principal signs of degradation were found to be brittleness, cracking and loss of surface gloss. It was also determined that the time for failure to occur was shorter than indicated from industry tests performed on material samples. This discrepancy is in part due to the fact that cable ties were tested in an end use, stressed condition, while most plastic resin suppliers conduct weathering tests using unstressed test bars.

Three cable tie materials (TEFZEL[■], HALAR[▲] and stainless steel) have superior ultraviolet light resistance. In tests conducted to date, both have shown no significant signs of degradation.

Determining the outdoor life expectancy of any material is difficult since there are other factors, besides ultraviolet light stability, which have to be considered. These factors are listed below and should be considered before specifying a cable tie material.

Table A - External Factors Which Affect the Life of a Cable Tie

FACTORS	DECREASED LIFE
Chemicals	Applications which have chemicals present can reduce the life. This is the most detrimental factor to the life of a tie.
Bundle Diameter	As the bundle diameter is reduced, the tie has more bending stress. A thick strap on small diameter has more stress.
Loading	If the tie is under high loading, this will add additional stress on the tie body.
Thickness	A thinner tie will have a decreased life since surface cracks will penetrate the thickness of the tie faster.
Vibration	Applications with high vibrations will cause impact which will propagate any surface cracks.
Degree of Exposure	No shield or shade, southern exposure, higher altitudes and high temperatures decrease the life of the cable tie.
Moisture	Dry environments cause nylon 6.6 ties to become more brittle. High humidity plus high temperatures can result in degradation due to hydrolysis in nylon.
Galvanized Metals	Acid rain and acid moisture acting on galvanized metals release chemicals known to attack nylon 6.6.

WEATHERING LIFE EXPECTANCY	
Materials (P/N Suffix)	Years*
Natural Polypropylene (-109)	1
Natural 6.6 Nylon	1-2
Flame Retardant Black 6.6 Nylon (-60)	1-2
Flame Retardant 6.6 Nylon (-69)	1-2
Heat Stabilized 6.6 Nylon (-30)	4-5
Heat Stabilized Natural 6.6 Nylon (-39)	1-2

Weather Resistant Polypropylene (-100)	7-9
Weather Resistant Nylon 12 (-120)	12-15
TEFZEL (-76)	>15
HALAR (-702)	>15
Stainless Steel (MLT prefix)	>30

*Based on assumption of minimum loading, no chemical attack and impact-free conditions.

Flammability

Flammability

A number of test procedures have been developed which can be used for the evaluation and comparison of various materials to support combustion.

UL94 Vertical Burning Test

Samples of a material, with dimensions 127mm by 12.7mm and the thickness of the intended end use product, are tested in an unaged "as manufactured" state and in an aged state (7 days at 158 °F, 70°C). The test requires the placement of a precisely controlled flame under a vertically supported specimen for a 10 second period. The flame is removed and the duration of flaming is recorded. If the flame extinguishes, the specimen is immediately subjected to a second 10 second ignition period. Duration of flaming is again recorded. A piece of surgical cotton is placed under the specimen. If drips ignite the cotton, this fact is also recorded.

Materials Classed 94V-0

Materials classed 94V-0 shall:

- Not have any specimens which burn with flaming combustion for more than 10 seconds after either application of the test flame
- Not have a total flaming combustion time exceeding 50 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Not have any specimens which drip flaming particles that ignite the dry absorbent surgical cotton located 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 30 seconds after the second removal of the test flame.

Materials Classed 94V-1

Materials classed 94V-1 shall:

- Not have any specimens which burn with flaming combustion for more than 30 seconds after either application of the test flame.
- Not have a total flaming combustion time exceeding 250 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Not have any specimens which drip flaming particles that ignite the dry absorbent surgical cotton located 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 60 seconds after the second removal of the test flame.

Materials Classed 94V-2

- Not have any specimens which burn with flaming combustion for more than 30 seconds after either application of the test flame
- Not have a total flaming combustion time exceeding 250 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Be permitted to have specimens that drip flaming particles which burn only briefly, some of which ignite the dry absorbent surgical cotton placed 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 60 seconds after the second removal of the test flame.

Flammability

ASTM D 635

Samples of a material, with dimensions 125mm by 12.5mm and the thickness of the intended end use product, are tested in an unaged “as manufactured” state. A precisely controlled flame is applied to the specimen and a stopwatch is started. The flame is applied for 30 seconds. The stopwatch is stopped when burning or glowing combustion ceases or when the flame has proceeded to a mark 100mm from the free end. Ten specimens are tested.

- Burning Rate
- If two or more specimens have burned to the 100mm mark then Average Burning Rate (cm/min) shall be reported as the average of the burning rates of all specimens which have burned to the 100mm mark.
- Average Time of Burning and Average Extent of Burning
- Average time of burning and average extent of burning of the sample shall be reported if none of ten samples or no more than one of twenty specimens have burned to the 100mm mark.
- Average Time of Burning (ATB):
 - Average Extent of Burning (AEB):

$$ATB, s = \frac{\sum_0^{10} (t - 30s)}{\text{Number of Specimens}}$$

Rounded to the nearest 5 sec.

$$AEB, mm = \frac{\sum_0^{10} (100 - \text{unburned length})}{\text{Number of Specimens}}$$

Rounded to the nearest 5mm

Flammability Ratings

Materials	UL94	ASTM D635

Stainless (MLT prefix)	Not Applicable	Not Applicable

*Rating based on 1/8" thick test samples.

**Consult factory for specific tie sizes.

Radiation/Moisture/Temperature/Tensile Strength

Radiation

Installed cable ties of various materials have been exposed to different amounts of radiation to determine the maximum acceptable limit. These tests were conducted by Panduit mainly to determine the acceptability for use in various areas of nuclear power plants (accumulated over 40 year life). See Table B for radiation resistance rating.

Moisture

Many plastics when exposed to high relative humidity absorb water and, as such, the tensile strength of the material can change dramatically. Nylon 6.6 when exposed to 100% relative humidity, will absorb as much as 8.5% water which will reduce tensile strength by 50% when compared to a dry cable tie. Polypropylene, HALAR[▲], Type 12 Nylon, and TEFZEL[■] are low water absorbing materials and, as such, the effect of water is minimal. See Table B for moisture absorption.

Temperature

Plastic materials normally undergo property loss during exposure to high temperature due to oxidation. The maximum temperature for successful service depends upon the material used as well as environmental conditions. Initially, plastics become more flexible and weaker when exposed to high temperatures. After a period of time, oxidation may occur which will cause embrittlement, making plastic cable ties more susceptible to failure from impact and vibration. Low temperature exposure will also make most plastics more brittle during this exposure, but little property loss occurs when the material is returned to room temperatures. The minimum continuous use temperature after installation is stated in Table B.

Tensile Strength

Most cable ties are selected based on material, length and minimum loop tensile strength. Minimum loop tensile strength was established under Military Specification MIL-S-23190. Each cross section cable tie (Miniature-M, Intermediate-I, Standard-S, Heavy-H and Extra Heavy-EH) has a different loop tensile strength when testing per MIL-S-23190.

The cable tie is first conditioned at 49°C (120°F), 20% relative humidity for 24 hours, then the cable tie is installed on a split mandrel and the halves of the mandrel separated at a rate of 1" (25.4mm) per minute (Fig.1). The separating force required to unlock or break the cable tie is the loop tensile strength. Loop tensile strength is dependent both on the locking design and the tensile strength (psi) of the material. As an example, the tensile strength of polypropylene material is approximately 1/2 to 1/3 of nylon 6.6; thus the loop tensile strength of a given cross section tie made of polypropylene would be much less than a tie made of nylon 6.6. This is another property to be considered when selecting a cable tie. The various representative loop tensile strengths are listed in Table B.

Fig. 1

Chemical Resistance

Chemical Resistance

Many factors combine to determine the useful life of a cable tie material and none is as important as chemical exposure. Various chemicals will have different effects on plastics depending on such things as chemical concentrations, temperature, stress and ultraviolet light. Table C is an excellent guideline for the selection of the best cable tie material. It should be noted that the exposure temperature for this chemical resistance chart is 70° F.

Table C — Resistance of PANDUIT® Cable Tie Materials to Chemical Attack at 70°F

— = Not Tested
 E = Excellent
 S = Satisfactory
 B = Slight Attack
 U = Attacked

¹ = Pitting occurs under some conditions
² = Attack may occur if sulfuric acid present
 Aq. = Aqueous
 C.S. = Cold Saturated

Quality . . . “First Among Equals” at *PANDUIT*

The owner-operator concept makes employees responsible for their areas of the manufacturing process.

Operator inspection is an important Panduit TQA procedure.

Members of Excellence Thru Quality Teams search for ways to improve product quality.

TQA is a Top Level Concern

Total Quality Assurance (TQA) has the highest priority at Panduit. Division managers are members of the Panduit Quality Council, which implements our “Excellence Through Quality” (ETQ) program. Under this program, all employees receive training in quality and are empowered to continually improve products and services in their work area. There is no mistaking that quality is a state of mind at Panduit.

In addition, Panduit engineering and manufacturing work closely together from the beginning to design quality into both the product and the manufacturing process.

People — the Key to Excellence

Although Panduit continues to invest heavily in testing and other equipment to support TQA activities, people remain the key to achieving excellence.

For example, under the “owner-operator” concept, individual employees, using continuous process testing, are responsible for the quality produced in their area of manufacturing or service.

ISO 9001

Virtually all Panduit worldwide manufacturing facilities have received ISO registration. This recognition indicates that we meet the most comprehensive international standards

in design, purchasing, manufacturing, testing, documentation, shipping and service. As a result, Panduit's high-quality products and services are helping customers meet ISO 9000 quality requirements while reducing their transaction and inspection costs.

In addition to ISO certification, Panduit provides additional quality requirements to meet the needs of specific industries.

Packaging

Panduit Packaging

All Panduit packaging is designed to provide complete and fast identification of contents, durable product protection, easy handling, informative graphics, and bar coding for more accurate inventory control. On our more popular parts, you can choose from our convenience pack, standard pack or bulk pack quantities.

Informative and Easy to Read Labels

Packaging

PANDUIT® Products are on Display at Your Local Panduit Distributor

Your local Panduit Distributor carries top quality PANDUIT® products and offers many advantages and services to help lower your transaction costs:

- Local stock for fast delivery and “Just-In-Time” requirements. Reduces your inventory costs.
- One stop for all your electrical needs because he stocks products from many manufacturers. One purchase order, less administrative/freight costs.
- Well trained personnel to answer any questions and to make sure you have the right product for the right job.

PAN-STEEL™ System

For All Harsh Environments

- High Strength
- Long Life
- Weather Resistance
- Chemical Resistance
- Temperature Extremes
- Radiation Resistance
- Permanent Identification

Sold exclusively through your local Panduit Distributor

PANDUIT® Stainless Steel Cable Ties and Accessories

PAN-STEEL™ Stainless Steel Tie System

RELIABLE PERFORMANCE IN SEVERE ENVIRONMENTAL CONDITIONS

- Perfect for indoor, outdoor and underground applications—excellent resistance to abrasion, radiation, weathering, corrosion and temperature extremes
- Ties are self-locking for fast cabling and can be installed by hand or with unique **PANDUIT** tools
- Safe to handle, safe for wires—no sharp edges (fully rounded sides)

TIES Standard Sizes

- Fully radiused sides
- Fast and easy to install (self-locking)
- 304 Stainless Steel
- Standard cross-section ties are MIL-S-23190 approved
- For more corrosive applications 316 stainless is available
- Det Norske Veritas approved on 316 material
- For extreme high temperature applications, 321 material is available

Double Wrap Metal Locking Ties

- Double wrapped stainless steel ties in 304 material for extra high strength in critical applications
- Double wrapped stainless steel ties allow for tighter tensioning on non-resilient bundles
- Available in .31" (7.9mm) width for bundle diameters ranging from 1.00"-10.00" (25mm-250mm)
- Loop tensile strength of 600 lbs. (2669N)
- Self-locking ties, no tools required
- Optional tooling is available to speed installation and lower installed costs (see page 74)

Cable ties body wraps around two times entering the locking head twice.

Stainless Steel Marking Products

Use PAN-STEEL Ties or stainless steel strapping to provide identification in harsh environments. The ties and strapping can be stamped with available tooling or custom stamped at the factory. Marker plates and metal embossed tape are also available.

MARKER PLATES AND TAGS

- Attached with PAN-STEEL ties
- 304, 316 stainless steel, brass, aluminum and anodized aluminum available
- Can be used as a flag or wrap
- Various sizes and shapes available; round, square, rectangular, octagonal, etc. Contact factory for part numbers etc.
- All can be custom marked by Panduit. See page 75 for details

CUSTOM MARKING SERVICE ON STAINLESS STEEL TIES, MARKER PLATES AND TAGS AND ANODIZED ALUMINUM LOCKS*

- High quality, sharp, crisp legends
- Bar coding capability on selected color tags
- Two (2) computer controlled systems available: Laser and Embosser
- Alphanumeric and sequential numbering for serialization
- Contact factory for information

*Anodized aluminum locks can only be marked by the Laser System.

COMPUTER CONTROLLED MARKING SYSTEMS

LASER MARKING SYSTEM

LASER MARKING SYSTEM:

Graphics capabilities along with block letters (bold) are available for high quality identification

along with bar coding on selected colored stainless steel marker tags. Also, alphanumeric and sequential numbering with multiple character sizes to choose from. The laser system provides both upper and lower case characters. Character sizes available: 1/8" (3.18mm) (shown), 3/16" (4.77mm), 1/4" (6.35mm), 5/16" (7.94mm) and 1/2" (12.7mm).* The laser is the ultimate in marking.

EMBOSSING SYSTEM

EMBOSSING SYSTEM:

Excellent for applications that will be exposed to occasional painting and excessive dirt. Can only be used on stainless steel and brass

marker plates and tags that are a maximum of .020" (.508mm) thick. Alphanumeric and sequential numbering capability. The embossing system provides upper case characters only. Character sizes available: 1/8" (3.18mm) and 3/16" (4.77mm) (shown).

*Other character sizes available. Contact factory.

PANDUIT® Stainless Steel Strapping

Stainless Steel Strapping

REPLACES TRADITIONAL WING SEAL STRAPS

- Suited to applications requiring higher loop tensile strength and/or wider bearing surfaces than **PAN-STEEL™** ties
- Fast and easy to install using **PANDUIT** installation tool
- Safe to handle—no sharp edges

STRAPPING Standard Sizes

- Suited to applications requiring higher loop tensile strength and/or wider bearing surfaces than **PAN-STEEL** ties
- Fast and easy to install using **PANDUIT** installation tool.
- Safe to handle—no sharp edges
- Buckle design provides low finished profile—after tensioning, cut end is locked inside buckle
- Standard material is 304 stainless, non-magnetic

*Nylon coated straps available. Contact factory.

PANDUIT® Wiring Accessories

Wiring Accessories are an integral part of Panduit's comprehensive selection of wire management products. These accessories help provide you with the lowest installed solution to controlling, mounting and protecting wire and cable. These products are manufactured in an environment committed to design innovation, high quality and knowledgeable service to our customers. The key benefits of this commitment are:

- The highest quality manufacturing environment, including statistical process control to meet applicable international and domestic standards

Contact the factory for registrar and product scope information.

- PANDUIT teams up with a national network of Distributors to provide you with Just In Time shipping to eliminate your need for large inventories
- Fully staffed engineering and tool & die departments to assist in designing solutions to specific industry applications
- Continuous research on materials, adhesives and new technologies to provide you the latest product innovations

Selection of Styles

Cable Tie Accessories

These products are used with **PANDUIT** Cable Ties to speed and simplify the mounting of wires, cables and tubing. Installation methods include self-adhesive-backed, user applied adhesive, screws, rivets or through-panel mount designs.

Wiring Accessories

These products—including fixed and adjustable diameter accessories—are used without cable ties. Mounting methods include self-adhesive-backed, user applied adhesive, screws, rivets or through-panel designs.

Harness Board Accessories

Panduit's unique selection of harness board accessories speeds the routing and forming of wire in harness fabrication. They hold wires at a uniform height above the board and are ideal for use with **PANDUIT** manual and automatic cable tie tooling.

Abrasion Protection Products

Spiral wrapping, braided expandable sleeving and corrugated tubing enclose wires, hoses and tubing to protect them from abrasion. They are available in a variety of sizes and materials to meet a broad range of indoor and outdoor applications.

Grommet edging provides abrasion protection on outside edges and holes cut through metal or plastic surfaces.

Combination Adhesive Mount/Cable Tie

Adhesive mount and cable tie molded as one piece help reduce inventory costs. Mount portion features ramp to guide tip into tie head and holes to install two (2) optional #6 screws for added mounting strength. Available with locking or releasable tie. Extended adhesive liner release tab on mount for fast liner removal.

4-Way Adhesive Backed Mounts

Lower your installed costs with fast, easy-to-install **PANDUIT** adhesive-backed cable tie mounts. Four-way tie entry for easy orientation of wires or cables.

For specific information on adhesive properties and technical data on mount selection, see [Pages 115 to 120](#).

PANDUIT mounts are produced either 2-up or 4-up for fast and easy liner removal to speed installation.

ABM1M-A and ABM1M-AT mounts are supplied on a dispenser strip of four mounts. ABMM-A and ABMM-AT mounts are supplied on a dispenser strip of two mounts.

PANDUIT® Epoxy Applied Mounts

Epoxy Applied Mounts

These mounts are designed for application with **PANDUIT** EMA Epoxy. Provides fast, strong, economical method to secure wire or cable to steel, aluminum, glass, wood and most other surfaces. Especially well suited to construction and maintenance applications where they eliminate the need to drill into surfaces.

Epoxy Adhesive and Mount Kits

EMSK3-1-X0 Epoxy Kit with mounts. Packed in sturdy foil pouch

EMA Epoxy supplied in convenient two-compartment mixer cup with a mixer stick for each cup. Each cup contains adhesive for three (3) EMA or ASMS mounts.

Epoxy hardens in about five (5) minutes. Supports about 5 lbs. after first 15 minutes. After full 24 hour curing time, bonding strength will exceed 50 lbs. on clean, grease-free surface.

PANDUIT® Cable Tie Mounts

Tie Mounts — Applied with User Supplied Adhesives

Apply cyanoacrylic or another type adhesive to mount surface. Any adhesive selected should be user-tested to assure suitability for the actual application. Mounts should be installed on a clean, dry and grease-free surface. Bond strength depends on adhesive used.

Low Profile Mount - AM2

Low profile design keeps bundle close to mounting surface where overhead space is limited.

Most commonly used parts appear in **BOLD**.

Knock-In Low Profile Mounts

Secures wires to any pre-drilled panel. Can be installed in any panel thickness. Eliminates screws.

Easy to Install

1. Push rivet in pre-drilled panel hole.
2. Use **PANDUIT** Rivet Installation Tool (TNR) or hammer to drive the pin flush to the base. This drives the rivet into the hole and secures the mount.
3. Attach wires to the mount with cable tie.

PANDUIT® Cable Tie Mounts

THM1SC Tie Harness Mount for Single Tie

Unique Mount is Attached to Harness
Automatically as Tie is Installed

- Secured with only 1 cable tie
- Used with the THMF base which opens and holds the mount ([See Page 126](#))
- Cable ties can be installed by hand with **PANDUIT** Automatic Cable Tie Tooling Installation Systems (see pages [Pages 46 to 49](#)) or pneumatic tool ([See Page 52](#)) or hand operated cable tie tools ([Pages 53 to 55](#)).
- Anti-rattle winged design
- Barb design is easy to insert into pre-drilled hole
- Strong. 50 lb. vertical extraction force from .250" hole
- Can be used with auto-fed or loose piece cable ties

Part Number†	Used With Cable Ties**	Dimensions inches (mm)			Panel Dimensions		Material	Color	Where Used	Mounting Method	Packaging*

-30 after the pkg. code is for black, heat stabilized nylon 6.6 material for applications up to 221°F.

The Tie Harness Mount System:

1. Snap mount into fixture. Mounting ears open for cable tie installation.

2. Apply cable tie with automatic cable tie tool.

Or apply cable tie by hand and tension with pneumatic cable tie tool.

Or apply cable tie by hand and tension with hand-operated cable tie tool.

3. Pull harness from fixture. Mounting ears close, ready for installation.

*Order the Number of Pieces Required in Multiples of Packaging Quantities.

†Part Numbers listed are for Standard Materials in Standard Package Quantity. For Bulk Package Part Numbers, see [Pages 128 & 129](#).

**Cable Tie Cross Section Sizes: M = Miniature, I = Intermediate, S = Standard, LH = Light Heavy and H = Heavy.

PANDUIT® Cable Tie Mounts

Control Panel Mount

Installed when switch is installed to save labor. Ideal for high strain areas where cable is routed from panel to panel door. Compatible with most control panel switch designs.

TELCO Installation Products

Stackable Cable Spacer

Just one part to inventory. Each spacer snaps by hand into another—increases spacer height by 1/2" increments. Because there is only one part, on-site sorting is eliminated. Can be used with up to 3/4" width (B or C lashed cable supports) in parallel or perpendicular applications.

Used perpendicular to strand and cable

Used parallel to strand and cable

Underground application

Wire/Cable Mounting Devices (used without cable ties)

Adhesive Backed Mounting Devices

Faster Liner Removal Speeds Installation and Lowers Install Cost

- The adhesive backed mounts are offered either as one or two mounts per liner
- The two-up mounts are easily removed just by bending the mounts away from the liner
- The individual mounts have a handy tear tab for quick removal

CLINCHER™ Adjustable Releasable Clamp

This clamp provides a fast and convenient method of securing bundles from .19" (4.8mm) up to .69" (17.5mm) diameter. It is available with adhesive backing or screw applied with one #6 (M3) screw.

The **CLINCHER** clamp is fast and easy to use . . .

PANDUIT® Adhesive Backed Mounting Devices

Adhesive Backed Flat Cable Mounts

LPFCM Type - Low Profile

This low profile mount is available in 3 sizes and provides cost effective cable containment and identification for stack heights up to .105". It features a matte, textured surface for either hand written identification or application of computer labels.

Part Number†	Cable Width In. (mm)	Dimensions inches (mm)				Material	Color	Where Used	Mounting Method	Max. Static Load Lbs. (g)	Packaging*

FCM Type

Four sizes, each with a stack height of .17" (4.3mm), to accommodate different flat cable widths. All sizes are available with adhesive backing or can be screw applied.

FCH Type

The FCH part is designed for flat cable up to a stack height of .25" (6.3mm), discrete wire and Data Comm cables. It is available with adhesive backing or can be screw applied.

The drawing applies to all mounts except FCM1 and FCM1.2 which have a **single mounting hole** with the "A" shown in the chart being C_L. (And no "D" dimension)

PANDUIT® Wire Mounting Devices

Fixed Diameter Cable Clamp Kit

KP-507 contains an assortment of fixed diameter clamps in a sturdy plastic kit box.

KP-507 Kit

Contains: (1) Plastic Kit Box and the following clamps:

(75) CCS12-S8	(25) CCS50-S8	(25) CCH44-S10	(10) CCH81-S10
(75) CCS10-S8	(70) CCH12-S10	(25) CCH50-S10	(10) CCH87-S10
(50) CCS25-S8	(50) CCH19-S10	(25) CCH56-S10	(5) CCH100-S10
(50) CCS31-S8	(45) CCH25-S10	(15) CCH62-S10	(5) CCH112-S10
(35) CCS38-S8	(35) CCH31-S10	(10) CCH69-S10	(5) CCH119-S10
(25) CCS44-S8	(25) CCH38-S10	(10) CCH75-S10	(5) CCH125-S10

Tension Wire Retainer

Wires are "slid" into the clip and held in place by tension. The clip may be used to mount flat items such as posters, mirrors, signs, etc.

Optical Fiber Network Saddle

The product is designed with rounded edges for routing fiber optic cables. This feature provides a very smooth surface between the mount and the fiber optic cable, thereby eliminating the potential for snagging and stress on the fiber optic cable.

Selection and Use of Adhesive Mounts

Selection and Use of PANDUIT® Adhesive Mounts

General Introduction

PANDUIT adhesive mounts provide a quick, economical and dependable method of supporting, routing and protecting wires or cables. Some are used with **PANDUIT** cable ties and others used independently. Adhesive backed mounts adhere to a variety of surfaces. This alternative to mechanical fasteners offers the advantage of lower installed cost with safe, easy to use, quality products.

Applications

- To route wires in control panels and switchboards
- To support bundles of wires away from moving mechanical devices
- Routing and harnessing cables, both indoors and out, to prevent safety hazards
- To organize flat cables in many locations with low profile construction
- Ideal for supporting wire bundles where holes cannot be put into the substrate
- To separate groups of wires for identification

Markets

- Original Equipment Manufacturers (OEM)
- Construction Industry
- Telecommunication Systems
- CATV
- Aerospace Industry
- Utilities
- Electronic Components
- Transportation Industry
- Appliance Manufacturers
- Maintenance and Repair Operations (MRO)

General Mount Guidelines

A. **PANDUIT** pressure sensitive adhesive (foam tape) mounts are intended to secure wire bundles or other light objects to smooth surfaces. These mounts are not designed to support excessive loads and should not be used when the maximum expected load exceeds the rated capacity of the mount.

Two types of double-coated polymeric foam adhesive tape are available. Rubber based type, the most widely used and generally recommended; and acrylic based type, the better choice for outdoor and higher temperature applications.

B. **PANDUIT** epoxy adhesive mounts are supplied for use on rough surfaces indoors or outdoors and require mixing a two-part Panduit-supplied epoxy adhesive before application.

Choosing the Right Adhesive

Panduit offers two standard pressure sensitive foam tapes which are available on most adhesive backed wiring accessories products. The general purpose tape is produced with a rubber based adhesive and can be identified by an “-A” in the part number. This tape develops its strength extremely fast and can be used in environments with temperatures ranging from -20°F to +120°F. The rubber based adhesive tape is the best choice for the vast majority of adhesive mount applications, including applications where powder coated surfaces are being used.

The second tape available is produced with an acrylic based adhesive (identified by an “-AT” in the part number). This tape is for use in environments where continuous exposure to temperatures as high as 180°F is possible. The acrylic based adhesive develops its maximum strength over a longer period of time than our rubber based adhesive. It is recommended that mounts produced with acrylic adhesive are allowed to dwell 8 hours after installation prior to loading. The acrylic based adhesive tape is a good choice in environments with prolonged exposure to UV rays or in environments with prolonged exposure to temperatures over 120°F. Panduit also offers a two-part epoxy for use in applications where excessive loading is required or where the surface to which the mount must be applied is porous rather than smooth. This adhesive is formulated specifically for use on **PANDUIT** mounts and is packaged in pre-measured cups which insures proper ratios of resin and hardener are being mixed, as well as eliminates waste.

Selection and Use of Adhesive Mounts

Application Chart

Since Panduit manufactures adhesive backed mounts with a variety of adhesive types, this chart should be used as a guideline for choosing the best adhesive for often-encountered conditions. Each type of adhesive is rated good, fair or poor for some specific mounting surfaces and/or chemical environments.

Surfaces	Rubber Based Foam Tape Mounts	Acrylic Based Foam Tape Mounts	Epoxy Applied Adhesive Mounts
Plastics	Good	Good	Good
Wood	Good	Good	Good
Glass	Fair	Good	Good
Painted Surfaces	Good	Good	Fair
Powder Coating	Good	Fair	Good
Metal	Good ¹	Good ¹	Good
Paper	Good	Good	Fair
Concrete, Stone, Masonry	Not Recommended	Not Recommended	Good
Chemical Resistance			
Water	Good	Good	Poor
Oil	Poor	Fair ³	Good
Gasoline	Poor	Fair ³	Fair
Dilute Acids	Poor	Fair ³	Fair
Dilute Alkalis	Good	Fair ³	Fair
Organic Solvents	Poor	Fair ³	Not Recommended
Outdoor Exposure	Not Recommended	Good	Good ²

Mount Spacing

To determine the number of mounts to use in a given application, the following formula can be used as a guideline:

$$\frac{\text{Cable or weight (lbs./ft.)}}{\text{Static Load rating of Mount (lbs/mt.)}} = \text{Spacing} \frac{\text{Mounts}}{\text{Ft.}}$$

1. Not recommended for use on copper or brass.
2. Mounts manufactured from outdoor material only. For specific applications, individual testing prior to extensive use is suggested.
3. Depends on concentration, exposure time and chemical composition.

See pages 118-120 for static load ratings of mounts. For specific applications we recommend individual testing prior to production use.

Surface Preparation

For best results, **PANDUIT** adhesive mounts should be applied to clean, dry, grease-free surfaces. It is recommended that for each individual application a solvent or cleanser be used to thoroughly prepare the surface for mount installation to obtain best results. The following are recommended guidelines:

1. For rubber and acrylic based foam tape adhesives, isopropyl alcohol may be used on most surfaces.
2. For epoxy type adhesives, especially masonry surfaces, be sure to clean all loose particles away before mount installation. Some surface abrasion is recommended to achieve maximum strength. A light rubbing with medium grit emery cloth or sandpaper is best. Wash after abrading.

Proper Installation Techniques

Pressure Sensitive Adhesive Mounts

For proper installation of adhesive mounts with foam tape, simply remove the release liner from foam adhesive and place the mount in the desired location. Apply firm pressure to the mount to insure proper adhesion. Avoid touching the adhesive prior to placing the mount on the surface.

Clean surface with a clean cloth and isopropyl alcohol.

Allow surface to air dry.

Remove the release liner, being careful not to touch the adhesive.

Apply full thumb pressure for at least 5 seconds.

Allow mount to properly dwell.

Epoxy Adhesive Mounts

PANDUIT EMA adhesive is a two-part epoxy cement which is packaged in convenient mixer cups containing an equal amount of resin and hardener. Peel the protective covering off and pop the center of the cup in to form a mixing bowl. Each cup is supplied with a mixer stick and contains enough epoxy to properly apply three EMS mounts. The resin and hardener should be thoroughly mixed together until the epoxy is a consistent and uniform color. The mixer stick can then be used to apply the adhesive to the mount. The epoxy should be forced into the grooves on the bottom of the mount to obtain optimum bond performance. The mount should be applied to the surface with light pressure and a back-and-forth twisting motion. Hardening of the epoxy begins five minutes after mixing at room temperature.

Selection and Use of Adhesive Mounts

Proper Storage Conditions

All **PANDUIT** adhesive products have an expiration date printed on the package label. Use the following storage guidelines:

1. For rubber and acrylic based foam tape adhesives, store in temperatures of 70°F (21°C) and 45% Relative Humidity (R.H.)
2. For epoxy type adhesives, store in temperatures of 40°F (4°C) to 75°F (25°C) and relative humidity not in excess of 45%.

Storage in opened containers is not recommended. Using the guidelines above, the average shelf life of foam tape is 2 years. Shelf life of epoxy is 1 year. Deviation from the recommended storage conditions may reduce the shelf life or adhesive strength. In any case, adhesive products should never be stored near heating vents or other heat sources, and storage in lower temperatures than those recommended may increase the shelf life.

Stock Rotation

Adhesive mount inventory should be rotated in order to insure the quality of the adhesive foam tape. Each package of **PANDUIT** adhesive backed mounts has a Quality Control Number and a best-if-used-by date on the package label. The best-if-used-by date provides the customer with an accurate way to control the rotation of inventory, and, as is the case with all Panduit products, the Quality Control Number provides complete traceability for all components that go into a specific production run of product.

w!qclb

Mount Removal

There is no simple or easy method for removing **PANDUIT** adhesives. A thin wire or razor blade can be moved in between the surfaces when removing foam tape mounts; however, the adhesive residue will remain on the surface. Epoxy adhesives may be removed with a commercial paint stripping solution.

Product Information*

The descriptions below refer to the adhesive mount information which appears in the following product information chart:

Part Number: The package code suffix indicates quantity, color and mount material. Most **PANDUIT** Adhesive Backed Mounts are available in both standard and bulk packaging and some part numbers are available in smaller merchandising packaging. Consult your local distributor or call our factory for specifics on additional package sizes.

Dimension: Given are over-all mount with adhesive dimensions; L = Base Length, W = Base Width, H = Height.

Adhesive Type: Refer to the preceding pages for more details on adhesives offered by Panduit.

Cable Ties: **PANDUIT** mounts are designed to use **PANDUIT** Cable Ties. The respective size(s) of tie is given.

Maximum Static Load: Values are given for shear, and/or normal loading, and optimal adhesion between surfaces.

Normal Service Temperature Range: Given are the continuous use temperature ranges. In most situations, mounts can withstand higher temperatures for limited periods of time. Mounts should be user tested to determine their suitability in specific applications.

Minimum Installation Temperature: Although not shown on the following pages, both rubber based and acrylic based adhesives develop their optimum strength faster when installed in temperatures above 70°F (21°C).

Dwell Time: Values given are time to allow mount to set before loading. Dwell time is increased when the application temperature is below minimum. NOTE: Acrylic based adhesives need to dwell for 8 hours prior to loading.

Mount Material: Given for each type of mount. A variety of additional materials may be available on many of the mounts listed; contact the factory for additional information on non-standard materials.

Screw Hole Size: Values are specified when applicable.

U.L. Recognized: Tested and recognized under the Underwriter's Laboratories, Inc., component recognition program.

PANDUIT® Harness Board Accessories

Harness Board Accessories

PANDUIT harness board accessories provide for the fast routing and forming of wires in harness fabrication. They hold the wires off the harness board at a uniform height for easy application of cable ties. The accessories are designed for use with various **PANDUIT** cable tie installation tools. The Low accessories are used with hand-operated tools. The High accessories are used with the automatic tools. To maintain the harness a uniform height of approx. 1.33 inches (33.8mm) (at the center of the harness) above the board, use RER Elastic Retainers, BR.75-E6 (or BR.5-E6), CPH.75-S8, TJF and SHHH1.S8 or SHH3-S8 harness board accessories.

This height suitable for use of PAT1M Automatic Cable Tie Installation Tool.

Wire Retainers

RER Type Replaceable Elastic Retainers

As wires are individually inserted, the bundle is pre-formed. When harness is complete, it can be easily snapped out. Three sizes available for 1/2" (12.7), 3/4" (19.0) and 1 1/4" (31.7) bundles.

Replacement Elastic

For economy, the elastic band can be replaced in the RER Elastic Retainers without removing the RER base.

Part Number	Pkg. Qty.

*Order the Number of Pieces Required in Multiples of Packaging Quantities.
†Part Numbers listed are for Standard Materials in Standard Package Quantity.

PANDUIT® Harness Board Accessories

Bundle Retainers

Spring fingers with large lead in, facilitate fast routing of wires and easy removal of completed harness. Overlapping feet allow the retainers to be butted together for wire breakouts. Three sizes available for 1/2" (12.7), 3/4" (19.0) and 2.00" (50.8) bundles.

Part Number†	Max. Dia. In (mm)	Dimensions Inches (mm)					Material & Color	Mounting Method	Std. Pkg. Qty.	Std. Ctn. Qty.

PANDUIT® Harness Board Accessories

T-Junction Fixture

In the "up" position to form harness

In the "down" position to tie and remove harness.

Using an integral harness board nail, the fixture moves up and down (see photos) to form "T" junction. Unique design reduces cable tie usage by 1/3 compared to other fixtures.

Part Number†	Max. Dia. In (mm)	Dimensions Inches (mm)					Material & Color	Mounting Method	Std. Pkg. Qty.	Std. Ctn. Qty.
		A	B	C	D	E

†Part Numbers listed are for Standard Materials in Standard Package Quantity.

PANDUIT® Harness Board Accessories

Fanning Strip System

Assures that wires are held in a particular orientation in sophisticated wiring harnesses. Consists of fanning strip and fanning strip holder.

Fanning Strip (FS156)

Contains evenly spaced "snap slots" to hold wires in place. No sharp edges to damage wire insulation. Becomes part of the wiring harness. Will accept wires up to 18 AWG. Used with FSH40 or FSHH holders.

Fanning Strip Holders

Low Holder (FSH40-X)

High Holder (FSHH-X)

Used in conjunction with RER.75-S6, BR.75-E6 (BR.5-E6) and CPH.75-S8. Ideal for use with PAT cable tie tool.

Part Number†	Dimensions Inches (mm)						Material & Color	Mounting Method	Std. Pkg. Qty.

PANDUIT® Harness Board Accessories

Spring Wire Breakout System

Consists of harness board springs and spring holders to hold wire ends taut. When harness is removed from board, wires simply pull out from spring.

PBSC Spring Wire Breakout

SHH Spring Holder

Each SHH Spring Holder is supplied with (1) rigid wire piece to hold the spring laterally and two #8 (M4) 2" (50.8) hex head wood screws. Two sizes available for use with PBSC1 and PBSC6.

Part Number†	Dimensions Inches (mm)			Material & Color	Mounting Method	Packaging*

Harness Board Platform

Elevates the bundle of wires from the harness board to allow the installation of Abrasion Protection products and the use of **PANDUIT** automatic cable tie tools. The platform is used as a template to mark the location of the nails. The nails are driven into the board with a hammer. The plastic sleeve slides over each nail.

*Order the Number of Pieces Required in Multiples of Packaging Quantities.
†Part Numbers listed are for Standard Materials in Standard Package Quantity.

PANDUIT® Harness Board Accessories

Harness Board Standoff Post

Used to hold a push mount accessory or cable tie at a specific location on a harness board. The Standoff Post is placed over a hole in the harness board, a bolt is then threaded into the bottom of the standoff from the backside of the board and tightened. Push mount accessories are inserted into the top of the Standoff Post prior to assembly. When the assembly is complete, the harness and the attached push mount are removed from the Standoff Post.

Part Number†	Dimensions Inches (mm)					Material & Color	Mounting Method	Std. Pkg. Qty.	Std. Ctn. Qty.
	A	B	C	D	E

HB6SP25-X	6.00 (152.4)			—	—				

Tie Harness Anchor Universal Fixture

THAUF4-X is used to hold a tie harness anchor at a specified location on a harness board. Unique step design accepts all 3 mount hole sizes found in **PANDUIT** tie harness anchors. When assembly is complete, the harness and attached anchor are removed from the harness board post. Can also be used with the harness board universal adapter (HBUA-X).

THAUF4-X	4.00 (101.6)	5.00 (127)	.50 (12.7)	—	—	Aluminum	(M6) Screw	10	100
----------	-----------------	---------------	---------------	---	---	----------	---------------	----	-----

Harness Board Universal Adapter

Used with Harness Board Standoff Post when you cannot drill mounting holes in your harness board. A bolt is inserted from the back side of the Adapter and then is turned right side up. The Adapter is now ready to be secured to your harness board by using self tapping screws.

HBUA-X	3.00 (77)	1.00 (25.4)	1.50 (38.1)	.50 (12.7)	.31 (7.9)	Black Nylon	Wood Screw	10	100
--------	--------------	----------------	----------------	---------------	--------------	----------------	---------------	----	-----

Tie Harness Mount Fixture

Used to hold and support the THM1SC Harness Mount ([See Page 95](#)). The mount is elevated from the harness board so that a cable tie can be installed by Panduit's automatic cable tie installation tools. The mount is pushed into the top of the fixture prior to assembly and pulled out of the fixture when the harness is complete.

THMF2-X	2.08 (52.8)	.28 (7.1)	See Drawing	Aluminum	(M6) Screw	10	50

Abrasion Protection Products

Spiral Wrapping

Grommet Edging

Corrugated Loom Tubing

Braided Sleeving

**Abrasion Protection for Wire
and Cable Insulation as well as
Hydraulic or Pneumatic Tubing**

PANDUIT® Spiral Wrapping

Spiral Wrapping

Features and Benefits

- Largest variety of colors, materials and sizes in the industry
- Available in seven different materials and twelve different colors
- Colors conform to Communications Wiring Standards
- Flexible, neat, fast
- Allows breakouts of single/multiple wires and rerouting of replacement wires
- Harness multiple cables into a single manageable bundle
- Abrasion protection for wires, cables, hoses and tubing
- Color code wire bundles
- Reusable
- Tool supplied in each package

Spiral Wrapping Suggested Applications

Use **PANDUIT®** Spiral Wrapping in office and industrial environments for the following applications:

- Organize wires for communication and computer equipment where access to the wires is required
- In OEM applications for protecting tubing and harnesses
- Abrasion protection for control panel wiring
- Personal computer and printer wire organization
- Protect glass tubes from abrasion and breakage
- Kink-proofing for all kinds of tubing . . . ideal for laboratories
- Eliminates lacing cord and tie offs
- Use orange spiral wrapping for protecting and identifying fiber optic cables

PANDUIT® Spiral Wrapping

The Functional Part Number System Makes Ordering Easy

UL94V-0 Polyethylene Spiral Wrapping and Grommet Edging

Panduit offers 94V-0 Polyethylene Spiral wrapping as a low cost, non-flammable alternative to TEFLON spiral wrapping. Use 94V-0 TEFLON where higher temperature applications are required.

UL94V-0 Polyethylene Spiral Wrapping and Grommet Edging:

- Pass UL requirements for 94V-0 flame rating of product for all wall thickness and outside diameters of spiral wrapping and all panel thicknesses of grommet edging.
- Pass UL requirements for 94V-0 flame rating for 1/32" thick material. This distinction is important due to the thin wall of smaller diameter spiral wrapping.

Refer to these UL 94V-0 rated polyethylene materials, easily identified on [pages 133](#) (spiral wrapping) and [136](#) (grommet edging) with suffix "FR" before part number packaging information.

‡TEFLON or equivalent fluorocarbon PTFE material is used. TEFLON is a registered trademark of E.I. DuPont Co.

PANDUIT® Spiral Wrapping

Most commonly used parts appear in **BOLD**.

PANDUIT® Grommet Edging

Grommet Edging Features and Benefits

- Use low cost polyethylene UL94V-0 flame retardant grommet edging for those areas where flammability is a concern.
- Nylon grommet edging strips conform to the Military Standard MS21266

Grommet Edging Suggested Applications

- Use the slotted wall in irregularly shaped and round panel holes.
- Use the solid wall product on straight edges

The Functional Part Number System Makes Ordering Easy

Grommet Edging Part Number Description

Example: **GEE36F-A-C0**

PANDUIT® Grommet Edging

PANDUIT Grommet Edging

- Protects and insulates wires and cables from chafing against sharp edges

Choose from four materials:

1) Nylon

- Self extinguishing
- For indoor use up to 149°F (65°C)

2) Polyethylene

- General purpose material for indoor use up to 122°F (50°C).
- Style GEE and GES provided in .030" (0.8) thick material, making them highly flexible
- Available with slotted or solid wall construction

3) Weather Resistant Polyethylene

- For outdoor use up to 122°F (50°C)
- Excellent resistance to acid rain and ultraviolet light

4) Flame Retardant Polyethylene

- UL94V-0 rated material
- Will not support a flame
- Available with slotted or solid wall construction

5) Adhesive Lined Polyethylene

- Base is lined with a pressure sensitive adhesive
- Available in natural and weather resistant
- Adhesive ensures that the product will stay where it is installed

Adhesive Lined

PANDUIT® Corrugated Loom Tubing

Corrugated Loom Tubing

- **PANDUIT** Corrugated Loom Tubing is offered for applications where spiral wrap or braided expandable sleeving may be difficult to install or where they do not offer the amount of protection required.
- Available in Nylon or Polyethylene, this product features a lengthwise slit which makes it easy to install onto a bundle of wires or a pre-assembled harness assembly.

Features and Benefits

- Protects and reduces the risk of damage to wiring
- Crush, impact and abrasion resistant
- Slit wall design for ease of installation
- Available in easy to handle 100' lengths
- Available in black and orange polyethylene and black heat stabilized nylon
- Hold in place with push type cable ties, adhesive or push type mounts

Corrugated Loom Tubing Suggested Applications

- Bundle wires in control panels
- Contain and organize loose and bundled wiring harnesses
- Route wires in automotive, truck, trailer, bus, conversion van, emergency service and recreational vehicle applications
- Protect wires in off road/mobile equipment
- Use in mining equipment
- Marine applications for protecting wires on boats and ships

Cutting Tool

- The ease of cutting **PANDUIT** Corrugated Loom Tubing further reduces your total installed cost.
- Slices through for clean, burr-free edges
- Rugged, ratchet action cuts, leaving a smooth edge

Part #	Description	Std. Pkg. Qty.
SRT	Used with corrugated loom tubing and PANDUIT Type P, L, C, TM and U Surface Raceway	1

Order the number of tools required.

PANDUIT® Corrugated Loom Tubing

Corrugated Loom Tubing

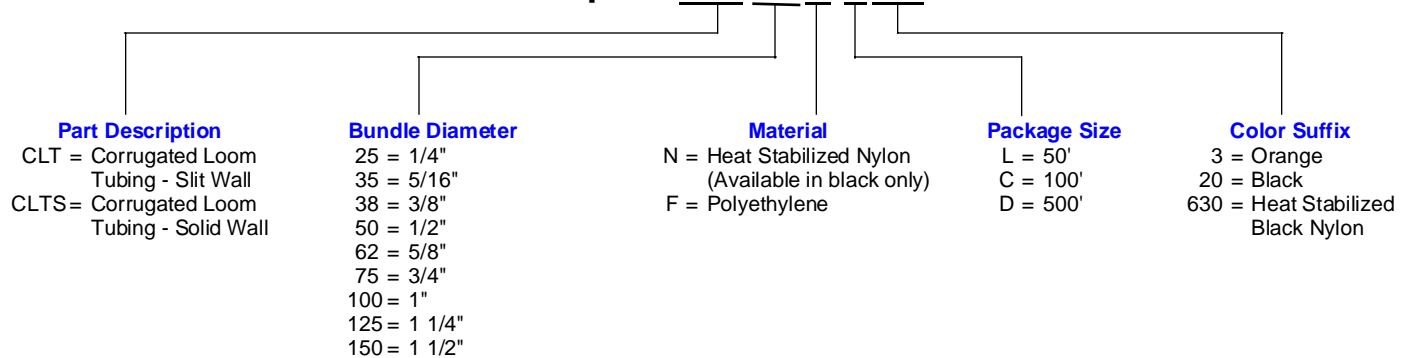

PANDUIT Corrugated Loom Tubing is for applications where spiral wrap or braided expandable sleeving may be difficult to install or where they do not offer the amount of protection required.

Corrugated Loom Tubing is available in Polyethylene or Heat Stabilized Nylon.

The Functional Part Number System Makes Ordering Easy

PANDUIT® Braided Expandable Sleeving

Braided Expandable Sleeving—Polyethylene Terephthalate—PET

- Provides continuous abrasion resistance for wires, cables and tubing
- Lightweight, durable protection
- Highly flexible open weave will not trap heat or humidity
- Rated for use up to 257°F (125°C)
- Allows for use with irregular shapes
- Stock colors: Black, gray, white and clear
- Sleeving cutting methods available. Contact factory for details

*Order number of reels required in multiples of Std. Ctn. increments.
Most commonly used parts appear in **BOLD**.

PANDUIT® Flame Retardant Braided Expandable Sleeving

Braided Expandable Sleeving—Flame Retardant Polyethylene Terephthalate—PET

- Provides continuous abrasion resistance for wires, cables and tubing
- Lightweight, durable protection
- Highly flexible open weave will not trap heat or humidity
- Rated for use up to 257°F (125°C)
- Allows for use with irregular shapes
- Self extinguishing, meets UL VW-1
- Provided in black or gray with white tracer, or in white with black tracer to identify flame retardant material

Abrasion Protection Products Flammability Tests and Classifications

- A number of test procedures has been developed which can be used for the evaluation and comparison of various materials to support combustion.
- Review the following classifications to find which category is designed to suit your abrasion and protection applications.

UL94 Vertical Burning Test

Samples of a material, with dimensions 5" by 1/2" and the thickness of the intended end use product, are tested in an unaged "as manufactured" state and in an aged state (7 days at 158°F, 70°C). The test requires the placement of a precisely controlled flame under a vertically supported specimen for a 10 second period. The flame is removed and the duration of flaming is recorded. If the flame extinguishes, the specimen is immediately subjected to a second 10 second ignition period. Duration of flaming is again recorded. A piece of surgical cotton is placed under the specimen. If drips ignite the cotton, this fact is also recorded.

Materials Classified 94V-0

Materials classified 94V-0 shall:

- Not have any specimens which burn with flaming combustion for more than 10 seconds after either application of the test flame.
- Not have a total flaming combustion time exceeding 50 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Not have any specimens which drip flaming particles that ignite the dry absorbent surgical cotton located 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 30 seconds after the second removal of the test flame.

Materials Classified 94V-1

Materials classified 94V-1 shall:

- Not have any specimens which burn with flaming combustion for more than 30 seconds after either application of the test flame.
- Not have a total flaming combustion time exceeding 250 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Not have any specimens which drip flaming particles that ignite the dry absorbent surgical cotton located 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 60 seconds after the second removal of the test flame.

(Continued on following page)

Abrasion Protection Products Flammability Tests and Classifications (cont.)

Materials Classified 94V-2

Materials classified 94V-2 shall:

- Not have any specimens which burn with flaming combustion for more than 30 seconds after either application of the test flame.
- Not have a total flaming combustion time exceeding 250 seconds for the 10 flame applications for each set of five specimens.
- Not have any specimens which burn with flaming or glowing combustion up to the holding clamp.
- Be permitted to have specimens which drip flaming particles which burn only briefly some of which ignite the dry absorbent surgical cotton located 12" (305mm) below the test specimen.
- Not have any specimens with glowing combustion which persists for more than 60 seconds after the second removal of the test flame.

Materials Classified UL-94 HB

- Specimens shall have a maximum burn rate of 1.5 in/min over 3 inches of a thickness of 0.120" to 0.5".
- Specimens shall have a maximum burn rate of 2.5 in/min over 3 inches for a thickness less than 0.120".

Material Descriptions

Natural Polyethylene

Our lowest cost material for indoor use up to 122°F. Natural is available in all sizes. Colors are available in 1/4" and 1/2".

Weather Resistant Polyethylene

This material has the same properties as natural polyethylene, and also has additives which allow it to resist the effects of ultraviolet light and acid rain in an outdoor environment. This product is available in black only.

Flame Retardant Polyethylene UL94-V2 Rating

This material is self extinguishing and passes the UL94 flame retardant test with a V2 rating (see above).

Flame Retardant Polyethylene UL94-V0 Rating

This material is self extinguishing and passes the UL94 flame retardant test with a V0 rating (see previous page).

Nylon

Our Nylon is strong, durable, self-extinguishing material for indoor use up to 149°F. It offers a combination of lightweight, wide temperature range, and high abrasion resistance. This material is suitable for applications where heavy vibration or stress exists on the wiring or tubing.

Weather Resistant Nylon

This material has the same properties as natural Nylon and also has additives which allow it to resist the effects of ultraviolet light in an outdoor environment. This product is available in black only.

TEFLON‡

This material is a non-flammable, fluorocarbon resin material. Suitable for use in any application (including nuclear containment). It is rated up to 356°F. Color: Natural with a bluish cast.

Polyethylene Terephthalate (PET)

This material is a thermoplastic polyester material designed for indoor applications. It is rated for use up to 257°F. Colors: Black, White and Gray.

Flame Retardant Polyethylene Terephthalate (PET)

This material is a self-extinguishing thermoplastic polyester that can be used indoors. It is also rated for use up to 257°F and is provided in black with white tracer (to identify the flame retardant material).

Natural Polyethylene

Our lowest cost material is for continuous use at temperatures -40°F (-40°C) to 176°F (80C).

Nylon

Nylon is a strong, durable, high abrasion resistant material for continuous use at temperatures

‡Teflon or equivalent fluorocarbon PTFE is used. Teflon is the registered trademark of E. I. DuPont.
