

# DS26F31C/DS26F31M

## Quad High Speed Differential Line Driver

### General Description

The DS26F31 is a quad differential line driver designed for digital data transmission over balanced lines. The DS26F31 meets all the requirements of EIA Standard RS-422 and Federal Standard 1020. It is designed to provide unipolar differential drive to twisted-pair or parallel-wire transmission lines.

The DS26F31 offers improved performance due to the use of state-of-the-art L-FAST bipolar technology. The L-FAST technology allows for higher speeds and lower currents by utilizing extremely short gate delay times. Thus, the DS26F31 features lower power, extended temperature range, and improved specifications.

The circuit provides an enable and disable function common to all four drivers. The DS26F31C/DS26F31M features TRI-STATE® outputs and logical OR-ed complementary enable inputs. The inputs are all LS compatible and are all one unit load.

The DS26F31C/DS26F31M offers optimum performance when used with the DS26F32 Quad Differential Line Receiver.

### Features

- Military temperature range
- Output skew—2.0 ns typical
- Input to output delay—10 ns
- Operation from single +5.0V supply
- 16-lead ceramic DIP Package
- Outputs won't load line when  $V_{CC} = 0V$
- Output short circuit protection
- Meets the requirements of EIA standard RS-422
- High output drive capability for 100Ω terminated transmission lines

Storage Temperature Range	
Ceramic DIP	-65°C to +175°C
Lead Temperature	
Ceramic DIP (Soldering, 60 sec.)	300°C
Maximum Power Dissipation* at 25°C	
Cavity Package	1500 mW
Supply Voltage	7.0V
Input Voltage	7.0V
Output Voltage	5.5V

\*Derate cavity package 10 mW/°C above 25°C.

**Operating Range**

DS26F31C	
Temperature	0°C to +70°C
Supply Voltage	4.75V to 5.25V
DS26F31M	
Temperature	-55°C to +125°C
Supply Voltage	4.5V to 5.5V

**Note 1:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" provide conditions for actual device operation.

**Note 2:** Unless otherwise specified min/max limits apply across the -55°C to +125°C temperature range for the DS26F31M and across the 0°C to +70°C range for the DS26F31C. All typicals are given for V<sub>CC</sub> = 5V and T<sub>A</sub> = 25°C.

**Note 3:** All currents into the device pins are positive; all currents out of the device pins are negative. All voltages are referenced to ground unless otherwise specified.

**Note 4:** Only one output at a time should be shorted.

**Note 5:** C<sub>L</sub> = 30 pF, V<sub>I</sub> = 1.3V to V<sub>O</sub> = 1.3V, V<sub>PULSE</sub> = 0V to +3V (See AC Load Test Circuit for TRI-STATE Outputs).

**Note 6:** Skew is defined as the difference in propagation delays between complementary outputs at the 50% point.
