

Specification

| Model No. | : | FXP.400 |
|----------------------|----|--|
| Part No. | : | FXP.400.07.0100A |
| Product Name | : | High Efficiency Ultra Wide-Band Antenna with 100mm Ø1.13 cable IPEX MHF(U.FL) |
| Features : | | High efficiency and ultra wide band Cover all LTE operation frequencies 100*38*0.1mm |
| International Patent | #: | US 2009/0189825 A1 |

RoHS ✓

1.0 Introduction

This flexible wideband ultra wide band antenna has been designed by using DIT Antenna High Frequency and Research Centre patented antenna design methodology in Dublin, Ireland. Taoglas and DIT have developed this range of solutions following years of expertise and collaboration in design of high performance ultra wide band antennas for wireless devices.

Taoglas have designed an ultra wideband antenna solution for global LTE "4G" systems. The bands are 690 MHz – 940 MHz and 1720 MHz – 3130 MHz.

The antenna is delivered on flexible circuit material which is ideal for the radiation patterns of antennas with higher frequencies and wider bandwidth. The efficiencies of the antenna are over 70% across the bands.

This material allows the antenna to be placed on the edge of a PCB and folded over the PCB or folded upwards and adhered to the device housing itself.

The antenna is currently available with cable and connector and its own ground plane for evaluation purposes.

2.0 Specification

| ELECTRICAL | | |
|---|--|--|
| Working Frequency | 690~940MHz 1720~3130MHz | |
| Gain | 0.55~ 4dBi | |
| Polarization | Linear | |
| Impedance | 50 ohms | |
| Max Input Power | 10 watts | |
| VSWR | <2.0:1 | |
| MECHANICAL | | |
| | MECHANICAL | |
| Dimensions | MECHANICAL 100 x 38 mm | |
| Dimensions Cable | MECHANICAL 100 x 38 mm Black 100mm 1.13 co-axial | |
| Dimensions Cable Connector | MECHANICAL 100 x 38 mm Black 100mm 1.13 co-axial IPEX MHF1 | |
| Dimensions Cable Connector | MECHANICAL 100 x 38 mm Black 100mm 1.13 co-axial IPEX MHF1 ENVIRONMENTAL | |
| Dimensions Cable Connector Temperature Range | MECHANICAL 100 x 38 mm Black 100mm 1.13 co-axial IPEX MHF1 ENVIRONMENTAL -40°C to +85°C | |

3.0 Antenna Response with Different Ground

The performance of the antenna remains quite stable on different ground plane lengths and widths as can be observed from the parametric sweeps of the ground plane length (*hgp*) and ground plane width (*wgp*).

4.0 S11 Measurement

Six different ground plane configurations have been tested:

- 1) Orthogonally displaced on the edge of an 80 x 40 mm² groundplane;
- 2) Co-planarly displaced on the edge of an 80 x 40 mm² groundplane;
- 3) Orthogonally displaced on the edge of a $100 \times 40 \text{ mm}^2$ groundplane;
- 4) Co-planarly displaced on the edge of a 100 x 40 mm² groundplane;
- 5) Orthogonally displaced on the edge of a 200 x 200 mm² groundplane;
- 6) Co-planarly displaced on the edge of a 200 x 200 mm^2 groundplane.

The antenna presents a versatile behaviour and offers a good impedance matching and radiation performance for different grounding solutions. In particular, it offers 6 dB return loss bands (5 dB at the edge) over the ranges 690 - 960 MHz and 1.71 - 2.69 GHz (LTE bands) for the configurations 4, 5 and 6. But for the configurations 1 and 2 its performance is very close to LTE requirements.

This suggests that this antenna can be allocated into small devises either orthogonally or co-planarly displaced at the edge of the chipboard. The co-planar configuration might be suitable for small (~ $80/100 \times 40 \times 33 \text{ mm}^3$) and low-profile devises.

4.1 Orthogonally displaced on 80*40 mm² ground plane;

5dB bands on measurement: 0.85 - 1.03 GHz, 1.57 - 3.39 GHz

5. Antenna Efficiency and Gain

We have tested both orthogonally displaced and co-planarly displaced configuration for all ground planes. These two different mounting provide the same antenna efficiency and gain.
